Patterns Of Symmetry Breaking:

Patterns of Symmetry Breaking Henryk Arodz, Jacek Dziarmaga, Wojciech Hubert Zurek, 2003-11-30 The concept of spontaneous symmetry breaking plays a fundamental role in contemporary physics. It is essential for the description of degenerate ground states, massless modes and topological defects. Examples are abundant in condensed matter physics, atomic and particle physics as well as in astrophysics and cosmology. In fact, spontaneous symmetry breaking can be regarded as a cornerstone of a whole branch of physics which intersects the above mentioned traditionally distinct fields. In the year 2000 the European Science Foundation (ESF) started the Programme Cosmology in the Laboratory (COSLAB) with the goal to search for and to develop analogies between condensed matter physics, particle physics and cosmology. Not surprisingly, spontaneous symmetry breaking is among the most useful notions in that endeavour. It has been decided that in the second year of the Programme a School should be held in order to work out and deliver to a wide audience of students synthetic overviews of achievements and of current research topics of COSLAB. This idea has been supported by the Scientific and Environmental Affairs Division of NATO by including the School in the renowned series of its Advanced Study Institutes. The School entitled Patterns of Symmetry Breaking was held in Cracow during 16-28 September 2002. It gathered 17 lecturers and about 60 students. The present volume contains notes of most of the lectures from that School. Mirror Neurons and the Evolution of Brain and Language Maksim Stamenov, Vittorio Gallese, 2002-01-01 The emergence of language social intelligence and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one's own The metaphor of mirror aptly comes to mind Recent investigations have shown that the human ability to mirror other's actions originates in the brain at a much deeper level than phenomenal awareness A new class of neurons has been discovered in the premotor area of the monkey brain mirror neurons Quite remarkably they are tuned to fire to the enaction as well as observation of specific classes of behavior fine manual actions and actions performed by mouth They become activated independent of the agent be it the self or a third person whose action is observed The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other The peculiar first to third person intersubjectivity of the performance of mirror neurons and their surprising complementarity to the functioning of strategic communicative face to face first to second person interaction may shed new light on the functional architecture of conscious vs unconscious mental processes and the relationship between behavioral and communicative action in monkeys primates and humans The present volume discusses the nature of mirror neurons as presented by the research team of Prof Giacomo Rizzolatti University of Parma who originally discovered them and the implications to our understanding of the evolution of brain mind and communicative interaction in non human primates and man Series B

Dynamic Patterns J. A. Scott Kelso, 1995 foreword by Hermann Haken For the past twenty years Scott Kelso's research has focused on extending the physical concepts of self organization and the mathematical tools of nonlinear dynamics to understand how human beings and human brains perceive intend learn control and coordinate complex behaviors In this book Kelso proposes a new general framework within which to connect brain mind and behavior Kelso's prescription for mental life breaks dramatically with the classical computational approach that is still the operative framework for many newer psychological and neurophysiological studies His core thesis is that the creation and evolution of patterned behavior at all levels from neurons to mind is governed by the generic processes of self organization Both human brain and behavior are shown to exhibit features of pattern forming dynamical systems including multistability abrupt phase transitions crises and intermittency Dynamic Patterns brings together different aspects of this approach to the study of human behavior using simple experimental examples and illustrations to convey essential concepts strategies and methods

with a minimum of mathematics Kelso begins with a general account of dynamic pattern formation He then takes up behavior focusing initially on identifying pattern forming instabilities in human sensorimotor coordination Moving back and forth between theory and experiment he establishes the notion that the same pattern forming mechanisms apply regardless of the component parts involved parts of the body parts of the nervous system parts of society and the medium through which the parts are coupled Finally employing the latest techniques to observe spatiotemporal patterns of brain activity Kelso shows that the human brain is fundamentally a pattern forming dynamical system poised on the brink of instability Self organization thus underlies the cooperative action of neurons that produces human behavior in all its forms Jingshin Physics

Symposium In Memory Of Prof Wolfgang Kroll Jong-ping Hsu,Huei Li Huang,Sow-hsin Chen,Leonardo Hsu,Shau-jin Chang,Bing Lin Young,C S Ting,Paul Eugenio,George Y Leung,Yi-chen Cheng,1997-06-13 Dr W Kroll a young post doc working under Heisenberg at Leipzig in the 1930s was forced to escape from the Nazis and eventually came to the National Taiwan University in 1941 He taught many of the advanced courses in theoretical physics for over two decades and prepared a generation of physicists in Taiwan A symposium on pure and applied physics was held in memory of Prof Kroll at the University of Massachusetts Dartmouth in August 1996 These proceedings composed of papers contributed to the symposium by many of Prof Kroll s former students now reaching professorial ranks in the West reflect in a small measure the legacy he left behind Pattern Formation in Continuous and Coupled Systems Martin Golubitsky,Dan Luss,Steven H.

Strogatz,2012-12-06 This IMA Volume in Mathematics and its Applications PATTERN FORMATION IN CONTINUOUS AND COUPLED SYSTEMS is based on the proceedings of a workshop with the same title but goes beyond the proceedings by presenting a series of mini review articles that survey and provide an introduction to interesting problems in the field The workshop was an integral part of the 1997 98 IMA program on EMERGING APPLICATIONS OF DYNAMICAL SYSTEMS I would like to thank Martin Golubitsky University of Houston Mathematics Dan Luss University of Houston Chemical Engineering and Steven H Strogatz Cornell University Theoretical and Applied Mechanics for their excellent work as organizers of the meeting and for editing the proceedings I also take this opportunity to thank the National Science Foundation NSF and the Army Research Office ARO whose financial support made the workshop possible Willard Miller Jr Professor and Director v PREFACE Pattern formation has been studied intensively for most of this century by both experimentalists and theoreticians and there have been many workshops and conferences devoted to the subject In the IMA workshop on Pattern Formation in Continuous and Coupled Systems held May 11 15 1998 we attempted to focus on new directions in the patterns literature *Spontaneous Formation of Space-Time Structures and Criticality* T. Riste,David Sherrington,2012-12-06 This volume contains the proceedings of a NATO Advanced Study Institute held at Geilo Norway between 2 12 April 1991 This institute was the eleventh in a series held biannually at Geilo on the subject of phase transitions It was intended to capture the latest ideas on selforganized patterns and criticality The Institute brought together many

lecturers students and active researchers in the field from a wide range of NATO and non NATO countries The main financial support came from the NATO scientific Affairs Division but additional support was obtained from the Norwegian Research Council for Science and the Humanities NAVF and Institutt for energi teknikk The organizers would like to thank all these contributors for their help in promoting an exciting and rewarding meeting and in doing so are confident that they echo the appreciation of all the participants In cooperative equilibrium systems physical states are described by spatio temporal correlation functions The intimate connection between space and time correlations is especially apparent at the critical point the second order phase transition where the spatial range and the decay time of the correlation function both become infinite The salient features of critical phenomena and the history of the development of this field of science are treated in the first chapter of this book

Identity Relations in Grammar Kuniya Nasukawa, Henk Riemsdijk, 2014-07-28 Few concepts are as ubiquitous in the physical world of humans as that of identity Laws of nature crucially involve relations of identity and non identity the act of identifying is central to most cognitive processes and the structure of human language is determined in many different ways by considerations of identity and its opposite The purpose of this book is to bring together research from a broad scale of domains of grammar that have a bearing on the role that identity plays in the structure of grammatical representations and principles Beyond a great many analytical puzzles the creation and avoidance of identity in grammar raise a lot of fundamental and hard questions These include Why is identity sometimes tolerated or even necessary while in other contexts it must be avoided What are the properties of complex elements that contribute to configurations of identity XX What structural notions of closeness or distance determine whether an offending XX relation exists or inversely whether two more or less distant elements satisfy some requirement of identity Is it possible to generalize over the specific principles that govern non identity in the various components of grammar or are such comparisons merely metaphorical Indeed can we define the notion of identity in a formal way that will allow us to decide which of the manifold phenomena that we can think of are genuine instances of some identity avoidance effect If identity avoidance is a manifestation in grammar of some much more encompassing principle some law of nature then how is it possible that what does and what does not count as identical in the grammars of different languages seems to be subject to considerable variation

Dynamics and Bifurcation in Networks Martin Golubitsky,Ian Stewart,2023-04-24 In recent years there has been an explosion of interest in network based modeling in many branches of science This book synthesizes some of the common features of many such models providing a general framework analogous to the modern theory of nonlinear dynamical systems How networks lead to behavior not typical in a general dynamical system and how the architecture and symmetry of the network influence this behavior are the book's main themes Dynamics and Bifurcation in Networks Theory and Applications of Coupled Differential Equations is the first book to describe the formalism for network dynamics developed over the past 20 years In it the authors introduce a definition of a network and the associated class of admissible ordinary differential equations in terms of a directed graph whose nodes represent component dynamical systems and whose arrows represent couplings between these systems They also develop connections between network architecture and the typical dynamics and bifurcations of these equations and discuss applications of this formalism to various areas of science including gene regulatory networks animal locomotion decision making homeostasis binocular rivalry and visual illusions This book will be of interest to scientific researchers in any area that uses network models which includes many parts of biology physics chemistry computer science electrical and electronic engineering psychology and sociology
