ABSTRACT The Clinical and Laboratory Standards Institute (CLSI) Subcommittee on Antimicrobial Susceptibility Testing (AST) develops and publishes standards and guidelines for AST methods and results interpretation in an annual update to the Performance Standards for Antimicrobial Susceptibility Testing (M100). This minireview will discuss changes to M100 for the 31st edition, including new and revised breakpoints and testing recommendations. New MIC and disk diffusion breakpoints are described for azithromycin (*Shigella* spp.), imipenem-relebactam (*Enterobacterales*, *Pseudomonas aeruginosa*, and anaerobes), and lefamulin (*Staphylococcus aureus*, *Haemophilus influenzae*, and *Streptococcus pneumoniae*), and disk breakpoints are described for azithromycin and *Neisseria gonorrhoeae*. The rationale behind revised oxacillin MIC breakpoints for select staphylococci is discussed. Updates to test methods include a method for disk diffusion using positive blood culture broth and use of linezolid to predict tedizolid susceptibility. There is clarification on which drugs to suppress on bacteria isolated from the cerebrospinal fluid and clarification on the use of a caret symbol attached to the intermediate category (I^h) to indicate those antimicrobials that concentrate in the urine.

KEYWORDS antimicrobial susceptibility testing, CLSI, M100

The Clinical and Laboratory Standards Institute (CLSI) Subcommittee on Antimicrobial Susceptibility Testing (AST) is a volunteer-led, multidisciplinary consensus body that develops and publishes standards and guidelines for AST methods and results interpretation. A key activity of the CLSI AST subcommittee is educational activities, coordinated by the Outreach Working Group (ORWG). This article is one such activity and was created on behalf of the ORWG. Weinstein and Lewis recently reviewed in detail the process that guides preparation, acceptance, and publication of CLSI AST standards (1). In an open forum, volunteers from the health care professions, government, and industry present suggestions, supported by data, for ways to improve the standards. When sufficient information has been obtained, a vote is taken to determine if the suggestion will be incorporated into the standard, based on the CLSI consensus process (1). The work of the AST Subcommittee is published in an annual update to the Performance Standards for Antimicrobial Susceptibility Testing (also known as M100). A no-fee read-only version of the 31st edition of M100 is available online at <http://em100.edaptivedocs.net/dashboard.aspx>, and a digital version for download or hard copy version of M100 and other CLSI documents can be ordered from clsi.org. This minireview will address the major changes in the 31st edition of the M100 document, published in March 2021 (2). At the beginning of each M100 is a listing of the "Overview of Changes" that occurred since the last edition of the document, including minor changes (e.g., formatting) that will not be covered in this review.
