*Hardware Implementation of Intelligent Systems* Horia-Nicolai Teodorescu, Abraham Kandel, 2013-11-11 Intelligent systems are now being used more commonly than in the past These involve cognitive evolving and artificial life robotic and decision making systems to name a few Due to the tremendous speed of development on both fundamental and technological levels it is virtually impossible to offer an up to date yet comprehensive overview of this field Nevertheless the need for a volume presenting recent developments and trends in this domain is huge and the demand for such a volume is continually

increasing in industrial and academic engineering communities. Although there are a few volumes devoted to similar issues, none offer a comprehensive coverage of the field; moreover, they risk rapidly becoming obsolete. The editors of this volume cannot pretend to fill such a large gap. However, it is the editors' intention to fill a significant part of this gap. A comprehensive coverage of the field should include topics such as neural networks, fuzzy systems, neuro-fuzzy systems, genetic algorithms, evolvable hardware, cellular automata-based systems, and various types of artificial life system implementations, including autonomous robots. In this volume, we have focused on the first five topics listed above. The volume is composed of four parts, each part being divided into chapters, with the exception of part 4. In Part 1, the topics of Evolvable Hardware and GAs are addressed. In Chapter 1, Automated Design Synthesis and Partitioning for Adaptive Reconfigurable Hardware, Ranga Vemuri and co-authors present state-of-the-art adaptive architectures, their classification, and their applications.

**Global Mobile Satellite Communications** Stojce Dimov Ilcev, 2005-12-05. Global mobile satellite communications (GSMC) are specific satellite communication systems for maritime, land, and aeronautical applications. It enables connections between moving objects such as ships, vehicles, and aircrafts and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT, or other landline telecommunications providers. Mobile satellite communications and technology have been in use for over two decades. Its initial application is aimed at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications, and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso, Borealis, and Concordia system. This book is important for modern shipping, truck, train, and aeronautical societies because GSMC in the present millennium provides more effective business and trade with emphasis on safety and commercial communications. *Global Mobile Satellite Communications* is written to make bridges between potential readers and current GSMC trends, mobile system concepts, and network architecture using a simple mode of style with understandable technical information, characteristics, graphics, illustrations, and mathematics equations. *Global Mobile Satellite Communications* represents telecommunications technique and technology which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off-shore constructions, and for everyone possessing satellite communications, handset phones.

*Mobile Telecommunications Standards* Rudi Bekkers, 2001. Gain a thorough understanding of the dynamics of today's mobile telecommunications standards with this unique new resource. The book examines the development and adoption trajectories of major European standards such as UMTS, GSM, GPRS, and TETRA. It presents a framework that analyzes the factors that influenced each standard's level of success and includes the most comprehensive case studies on these standards.

**Ultra-high Frequency Linear Fiber Optic Systems** Kam Y. Lau, 2011-05-10. This book provides an in-depth treatment of both linear fiber optic systems and their key enabling devices. It presents a concise but rigorous treatment of the theory and practice of analog linear fiber optics links and systems that

constitute the foundation of Hybrid Fiber Coax infrastructure in present day CATV distribution and cable modem Internet access Emerging applications in remote fiber optic feed for free space millimeter wave enterprise campus networks are also described Issues such as dispersion and interferometric noise are treated quantitatively and means for mitigating them are explained This broad but concise text will thus be invaluable not only to students of fiber optics communication but also to practicing engineers To the second edition of this book important new aspects of linear fiber optic transmission technologies are added such as high level system architectural issues algorithms for deriving the optimal frequency assignment directly modulated or externally modulated laser transmitters and the use of Erbium doped fiber amplifier EDFA in linear fiber optic systems Significant examples of field deployed military systems enabled by linear fiber optic links are described in an appendix

**Ultra-high Frequency Linear Fiber Optic Systems** Kam Lau, 2009-04-22 This book provides a concise but rigorous treatment of the theory behind analog and digital fiber optics links and system issues The book reduces the complex subject to simple core explanations and interpretations It is designed for a one semester course on fiber optics systems and communication links Attention is paid both to the digital links prevalent in traditional telecommunication networks and to the analog links important in cable modem distribution networks for Internet service distributions This broad but concise text will thus be invaluable not only to students of fiber optics communication but also to practicing engineers

*The Worldwide History of Telecommunications* Anton A. Huurdeman, 2003-07-31 The first comprehensive history of the Information Age how we got there and where we are going The exchange of information is essential for both the organization of nature and the social life of mankind Until recently communication between people was more or less limited by geographic proximity Today thanks to ongoing innovations in telecommunications we live in an Information Age where distance has ceased to be an obstacle to the sharing of ideas The Worldwide History of Telecommunications is the first comprehensive history ever written on the subject covering every aspect of telecommunications from a global perspective In clear easy to understand language the author presents telecommunications as a uniquely human achievement dependent on the contributions of many ingenious inventors discoverers physicists and engineers over a period spanning more than two centuries From the crude signaling methods employed in antiquity all the way to today's digital era The Worldwide History of Telecommunications features complete and fascinating coverage of the groundbreaking innovations that have served to make telecommunications the largest industry on earth including Optical telegraphy Electrical telegraphy via wires and cables Telephony and telephone switching Radio transmission technologies Cryptography Coaxial and optical fiber networks Telex and telefax Multimedia applications Broad in scope yet clear and logical in its presentation this groundbreaking book will serve as an invaluable resource for anyone involved or merely curious about the ever evolving field of telecommunications AAP PSP 2003 Award Winner for excellence in the discipline of the History of Science
