Grasslike Plants A. J. Oakes, 2012-12-06 The Gramineae or grass family is second in size only to the Compositeae or sunflower family It is among the most important plant families in the world The major food crops of the world are found in the grass family From time immemorial grasses have provided food and shelter for humanity domesticated livestock and wildlife without grasses these forms of life might cease to exist The grass family is large in size diverse in habit and ubiquitous in distribution Earth would be bleak and bare indeed in the absence of this life sustaining plant family In addition to its economic and industrial value the grass family has some ornamental value It provides us with physical sustenance and gives us much pleasure and satisfaction in its ornamental forms The purpose of this book is to point out the value and usefulness of grasses as ornamentals and to delineate their attributes and uses in the home in the garden and in the landscape Ornamental grasses serve a unique and significant purpose in ornamental horticulture Horticulturists other plant scientists and nursery personnel are more fully aware of the value and usefulness of grasses as ornamentals than is the general public It is mainly for this reason that this work is directed toward the home gardener and the scientist alike in the hope of enhancing reader appreciation of the role grasses play in ornamental horticulture *Fall and Winter Cabbages* Charles Carter Newman, 1910 *Gardener's Monthly and Horticultural Advertiser*, 1868 Yield Formation in the Main Field Crops V. Cerný, L. Hruška, J. Petr, 2012-12-02 This book gives a detailed overview of production processes and yield formation in field crops and permanent grasslands Yield formation is discussed by the authors as a dynamic process involving many factors at each stage Knowledge of the optimum levels of individual yield components makes it possible to control this dynamic process It is intended that this approach will help to point out gaps in the understanding of the production processes and indicate the direction for further research on this subject The authors report on various aspects which are involved in yield formation such as uptake of nutrients root growth water use photosynthesis transport distribution and accumulation of photosynthates etc A separate chapter discusses the production process as seen from a genetic standpoint It includes an analysis of phenotype and genotype with respect to production potential also the heredity variability of yield potential and new cultivation methods are mentioned The main part of the book deals with the theory and practice of yield formation in cereals maize legumes sugarbeet potatoes clovers and perennial grass stands The Teaching of Nature Study and Elementary Science for Grades Kindergarten to Eight New Jersey. Allelopathy in the Life of Plants and their Communities A.M. Grodzinskii, 2016-03-01 In translating this book we have attempted to preserve as much as possible the style and format of the original book However there are always difficulties in translating a technical work from one language to another especially where different scripts or alphabets are used Where possible the figures from the original Russian edition have been retained and modified with English text As the book was written fifty years ago there have been subsequent changes to things such as chemical terms plant names plant family names etc and where it helps to clarify reading of the book such changes have been made or noted In a few cases explanatory notes have been added to help amplify the text where the exact meaning may be unclear to the present day reader Explanatory footnotes supplied by the translators are those that are numbered others with symbols are owing to Grodzinskii Where possible errors ambiguities and omissions have been amended

Progress in Plant Growth Regulation C.M. Karssen, L.C. van Loon, D. Vreugdenhil, 2012-12-06 The current

growing interest of molecular biologists in plant hormone research is undoubtedly the most promising development of recent times Many papers were presented during the 14th International Conference on Plant Growth Substances illustrating the impact of this new approach on our understanding of hormone controlled processes The specific character is the integrated study of plant growth regulation at all levels ranging from single molecules to the entire plant and its functioning in the environment Hormones play an essential role in the regulation but not an exclusive one Other compounds and factors such as Ca^{2+} for instance are often of equal relevance because they may take part in the signal transduction pathway Moreover regulation of the regulator by non hormonal factors is an essential part of any control mechanism The present volume reflects the change in interest from plant growth substances to plant growth regulation **Garden Magazine and Home**
