[Superfund problems can be solved--](#) , **It's All Relative** Anne Collins, Linda Dacey, 2024-11-01 For years students have been taught to cross multiply when presented with proportion problems Few understood what they were doing or why they were doing it Rarely were students invited to think about various representations to determine the relationship between the two ratios being compared The ideas and activities in this guide will help you provide students with the conceptual understanding of ratios and proportional thinking that is essential for solving real world problems and achieving success in higher level mathematics It s All Relative includes thirty modules which are aligned to specific Common Core State

Standards Each module in this accessible spiral bound flipchart addresses specific mathematical practices and common misconceptions features timely classroom examples includes proven ready to use activities and provides ideas for adapting activities to meet the needs of individual learners The authors particularly emphasize how to use visual models tables tape diagrams graphs and double number lines to represent ratios and proportional thinking These visual models which may be new to many teachers enhance students conceptual understanding and improve their ability to solve a wide range of proportional reasoning problems

*Making Problems, Creating Solutions* Jill Ostrow, 1999 In *Making Problems Creating Solutions* Jill Ostrow rethinks the teaching of mathematics and shows teachers how to build challenging learning environments in elementary classrooms She introduces the notion of workshop learning in mathematics and demonstrates ways in which teachers can readily integrate math into all curricular areas Traditional mathematics instruction consists of statements of rules followed by examples which define those rules the tell show and do model Under this model math concepts are fed to students in a sequence determined by the teacher rather than the intellectual readiness of the child Alternatively Jill takes a process approach to mathematics acquisition that is based upon understanding challenge independence confidence and choice Such an approach makes it easier for kids to apply their knowledge to new problems and to other areas of their lives *Making Problems Creating Solutions* gives educators a chance to see the NCTM Standards as well as many other mathematics curricula put into authentic practice provides examples of solutions and thinking strategies of students ages 6 to 12 describes a new and innovative approach to teaching calendar contains a large section on assessment features an extensive appendix of problems with each problem annotated to show which standard is being addressed This book shows teachers how to encourage kids to create problem solving strategies and then to share and discuss those strategies with peers It is an appropriate text for both preservice and inservice programs as well as math inservice workshops In *Making Problems Creating Solutions* Jill places meaning and purpose at the heart of her mathematics program and in turn gives teachers ideas and techniques that will inspire critical thinking in young mathematicians
