Sullivan,2012-12-06 If the reader will excuse a brief anecdote from my own intellectual history I would like to use it as an introduction to this book In 1957 I was a sophomore at an undergraduate liberal arts college major ing in medieval history This was the year that we were receiving our first introduction to courses in philosophy and I took to this study with a passion In pursuing philosophy I discovered the area called philosophical psychology which was a Thomistic category of inquiry For me philosophical psychology meant a more intimate study of the soul psyche and I immediately concluded that psychology as a discipline must be about this pursuit This philosophical interest led me to enroll in my first introductory psychology course Our text for this course was the first edition of Ernest Hilgaard s Introduction to Psychology My reasons for entering this course were anticipated in the introductory chapter of Hilgaard s book where the discipline and its boundaries were discussed and this introduction was to disabuse me of my original intention for enrolling in the course I was to learn that in the 20th century people who called themselves psychologists were no longer interested in perennial philosophical questions about the human psyche or person In fact these philosophical questions were considered to be obscurantist and passe Psychology was now the scientific study of human behavior This definition of psychology by Hilgaard was by no means idiosyncratic to this introductory textbook *Psychological Reality* K. Hillner,2000-04-01 This volume presents one possible conceptual analysis of the task of constructing a model of psychological reality so that psychology s pluralistic state can be put into perspective Chapters 1 and 2 specify the essential input assumptions of the analysis establish the boundary conditions of the treatise preview the kinds of decisions involved in the construction process and present some necessary background information Chapters 3 to 5 collectively abstract out possible psychological universes and recount the dominant classical and contemporary models of psychological reality framework Chapters 6 to 9 focus on the philosophical input into psychology especially as related to the nature of humanity the mind body problem scientific explanation and the discipline s two fundamental analytical categories behavior and experience Chapters 10 to 12 highlight many of the cultural and pragmatic constraints imposed on any model of psychological reality by considering the applied contextual and relational aspects of psychology **Introduction to Psychopathology** Alessandra Lemma,1996-08-22 I was most impressed by the author s thoroughness in writing this book She seems to leave no stone uncovered this is a work which should become a necessity for all counsellors counselling psychologists psychiatric nurses and psychotherapists This is a book to which I will make reference time and time again and one which will occupy a prominent place in my library Counselling The Journal of the British Association for Counselling An invaluable handbook for students of psychotherapy and a good reference for established therapists I recommend that all therapists have a copy of this book on their shelf Psychology Health Medicine Assessmenp and refer

The Critique of Psychology Thomas Teo, 2006-07-18 Closely paralleling the history of psychology is the history of its critics their theories and their contributions The Critique of Psychology is the first book to trace this alternate history from a unique perspective that complements the many existing empirical theoretical and social histories of the field Thomas Teo cogently synthesizes major historical and theoretical narratives to describe two centuries of challenges to and the reactions of the mainstream Some of these critiques of content methodology relevance and philosophical worldview have actually influenced and become integrated into the canon others pose moral questions still under debate All are accessibly presented so that readers may judge their value for themselves Kant s critique of rational and empirical psychology at the end of the 18th century The natural scientific critique of philosophical psychology in the 19th century The human scientific critique of natural scientific psychology The Marxist traditions of critique Feminist and postmodern critiques and the contemporary mainstream Postcolonial critiques and the shift from cross cultural to multicultural psychology This is not a book of critique for critique s sake Teo defines the field as a work in progress with goals that are evolving yet constant In emphasizing ethical and political questions faced by psychology as a discipline this visionary book points students academics and practitioners toward new possibilities for their shared future

The Justice Motive in Social Behavior Melvin J. Lerner, Sally C. Lerner, 2013-11-11 This volume was conceived out of the concern with what the imminent future holds for the have countries those societies such as the United States which are based on complex technology and a high level of energy consumption Even the most sanguine projection includes as base minimum relatively rapid and radical change in all aspects of the society reflecting adaptation or reactions to demands created by potential threat to the technological base sources of energy to the life support system itself Whatever the source of these threats whether they are the result of politically endogenous or exogenous forces they will elicit changes in our social institutions changes resulting not only from attempts to adapt but also from unintended consequences of failures to adapt One reasonable assumption is that whatever the future holds for us we would prefer to live in a world of minimal suffering with the greatest opportunity for fulfilling the human potential The question then becomes one of how we can provide for these goals in that scenario for the imminent future a world of threat

Development in Context Felicisima C. Serafica, 2015-06-19 The relationship between the cognitive and social spheres of human functioning and their context has long been regarded by social and behavioural scientists as a central theoretical issue By the early 1980s a number of empirical studies had further elucidated the nature of this relationship but no attempt had been made to present a coherent picture of the research and developments in this increasingly popular area of study Originally published in 1982 the topics covered in this book filled the gap admirably They present a view of the development of aspects of the self and of self other relations and how these two lines of development interact within a given context All the contributions attempt to portray the child s developing awareness of the self in relation to the social world but all consider it from different perspectives and in varying degrees of detail This useful collection by a number of well known contributors should still be of great value to students of developmental and social psychology **A Critical History and Philosophy of**
