Radar Signal Simulation Richard L. Mitchell, 1985-06-01 **Radar Signal Simulation** Richard L. Mitchell, G. E. Pollon, J. F. Walker, 1985 **Radar Signal Simulation** R.L. Mitchell, 1976 Radar Signal Simulation at Intermediate Frequencies S. Das, 1974 **Radar Simulation for an Adaptive Doppler Radar Signal Processor** Byoungcho Cho, 1987 **Radar Systems Analysis and Design Using MATLAB** Bassem R. Mahafza, 2022-03-28

The first edition of this ground breaking and widely used book introduced a comprehensive textbook on radar systems analysis and design providing hands on experience facilitated by its companion MATLAB software. The book very quickly turned into a bestseller. Based on feedback provided by several users and drawing from the author's own teaching experience the 4th edition adopts a new approach. The presentation in this edition takes the reader on a scientific journey whose major landmarks comprise the different radar subsystems and components. Along the way the different relevant radar subsystems are analyzed and discussed in great level of detail. Understanding the radar signal types and their associated radar signal processing techniques are key to understating how radar systems function. Each chapter provides the necessary mathematical and analytical coverage required for a sound understanding of radar theory. Additionally dedicated MATLAB functions programs enhance the understanding of the theory and establish a means to perform radar system analysis and design trades. The software provides users with numerous varieties of graphical outputs. Additionally a complete set of MATLAB code that generates all plot and graphs found within the pages of this textbook are also available. All companion MATLAB code can be downloaded from the book's web page. The 4th Edition Takes advantage of the new features offered by MATLAB 2021 release. Brings the text to a current state of the art. Incorporates much of the feedback received from users using this book as a text and from practicing engineers accordingly several chapters have been rewritten. Presents unique topics not found in other books. Maintains a comprehensive and exhaustive presentation. Restructures the presentation to be more convenient for course use. Provides a post course reference for engineering students as they enter the field. Offers a companion solutions manual for instructors. The 4th edition will serve as a valuable tool to students and radar engineers by helping them better analyze and understand the many topics of radar systems. This book is written primarily as a graduate level textbook although parts of it can be used as a senior level course. A companion solutions manual has been developed for use by instructors.
