Radiation Defect Engineering Selected Topics In Electronics And Systems:

Radiation Defect Engineering Vitaliĭ Vasil'evich Kozlovskii, Vera Abrosimova, 2005 Design of High-speed Communication Circuits Ramesh Harjani, 2006 MOS technology has rapidly become the de facto standard for mixed signal integrated circuit design due to the high levels of integration possible as device geometries shrink to nanometer scales The reduction in feature size means that the number of transistor and clock speeds have increased significantly In fact current day microprocessors contain hundreds of millions of transistors operating at multiple gigahertz Furthermore this reduction in feature size also has a significant impact on mixed signal circuits Due to the higher levels of integration the majority of ASICs possesses some analog components It has now become nearly mandatory to integrate both analog and digital circuits on the same substrate due to cost and power constraints This book presents some of the newer problems and opportunities offered by the small device geometries and the high levels of integration that is now possible The aim of this book is to summarize some of the most critical aspects of high speed analog RF communications circuits Attention is focused on the impact of scaling substrate noise data converters RF and wireless communication circuits and wireline communication circuits including high speed I O

Frontiers In Electronics Sorin Cristoloveanu, Michael S Shur, 2009-08-06 Frontiers in Electronics contains the selected best papers presented at the Workshop on Frontiers in Electronics WOFE 07 This meeting was the fifth in the series of WOFE workshops and strongly reinforced the tradition of scientific quality and visionary research The issues addressed ranged from THz and infrared electronics to nanoelectronics and photonics The papers focused on the fabrication characterization and applications of nanodevices wide band gap structures and state of the art FETs The participants also discussed the device physics and processing issues including aspects related to SOI and germanium on insulator technologies TFTs and advanced CMOS and MOSFETs It is this cross pollination between different but related fields that made this conference very special This book which goes beyond the publication of the WOFE Proceedings includes full length invited papers selected at the conference and reviewed by international leaders The book is divided into four distinct sections with the common denominator throughout being the nano device present under various metamorphoses in the wide CMOS and optoelectronics arena a

Advanced Semiconductor Devices Michael S. Shur, Paul A. Maki, James Kolodzey, 2007 This volume covers five emerging areas of advanced device technology wide band gap devices terahertz and millimeter waves nanometer silicon and silicon germanium devices nanoelectronics and ballistic devices and the characterization of advanced photonic and electronic devices The papers by leading researchers in high speed and advanced electronic and photonic technology presented many firsts and breakthrough results as has become a tradition with the Lester Eastman Conference and will allow readers to obtain up to date information about emerging trends and future directions of these technologies Key papers in each section present snap shot and mini reviews of state of the art and hot off the press results making the book required reading for engineers scientists and students working on advanced

and high speed device technology **SiC Materials and Devices** Michael Shur, Sergey L. Rumyantsev, Mikhail Efimovich Levinshtein, 2006 After many years of research and development silicon carbide has emerged as one of the most important wide band gap semiconductors The first commercial SiC devices power switching Schottky diodes and high temperature MESFETs are now on the market This two volume book gives a comprehensive up to date review of silicon carbide materials properties and devices With contributions by recognized leaders in SiC technology and materials and device research SiC Materials and Devices is essential reading for technologists scientists and engineers who are working on silicon carbide or other wide band gap materials and devices The volumes can also be used as supplementary textbooks for graduate courses on silicon carbide and wide band gap semiconductor technology **Radiation Defect Engineering** Vitali Vasilievich Kozlovski, Kozlovski Vitali, Vera Abrosimova, 2005 The increasing complexity of problems in semiconductor electronics and optoelectronics has exposed the insufficient potential of the technological doping processes currently used One of the most promising techniques which this book explores is radiation doping the intentional directional modification of the properties of semiconductors under the action of various types of radiation The authors consider the basic principles of proton interactions with single crystal semiconductors on the basis of both theory as well as practical results All types of proton modifications of the materials known presently are analyzed in detail and exciting new fields of research in this direction are discussed
