Energy Research Abstracts ,1993 Nuclear Materials Under Irradiation Serge Bouffard,Nathalie Moncoffre,2024-01-04 At every stage of the fuel cycle the materials used are at the heart of nuclear energy safety issues These materials which range from steel to polymers including ceramics glass concrete and graphite are submitted to extreme stresses combining mechanical thermal and irradiation constraints The objective of this book is to provide a basis for the research of nuclear materials subjected to irradiation with the desire to contextualize them in the industrial environment Therefore most of the chapters are co authored and contain a mix of basic and applied research The reader will find chapters on nuclear reactor materials structural materials neutron absorbers moderators and nuclear fuel and on materials in waste management glass concrete and organic materials These material chapters are complemented by more general information on defects and their creation radiolysis and irradiation and characterization tools *MEMS and Microstructures in Aerospace Applications* Robert Osiander,M. Ann Garrison Darrin,John L. Champion,2018-10-03 The promise of MEMS for aerospace applications has been germinating for years and current advances bring the field to the very cusp of fruition Reliability is chief among the challenges limiting the deployment of MEMS technologies in space as the requirement of zero failure during the mission is quite stringent for this burgeoning field MEMS and Microstructures in Aerospace Applications provides all the necessary tools to overcome these obstacles and take MEMS from the lab bench to beyond the exosphere The book begins with an overview of MEMS development and provides several demonstrations of past and current examples of MEMS in space From this platform the discussion builds to fabrication technologies the effect of space environmental factors on MEMS devices and micro technologies for space systems instrumentation communications thermal control guidance navigation and control and propulsion Subsequent chapters explore factors common to all of the described systems such as MEMS packaging handling and contamination control material selection for specific applications reliability practices for design and application and assurance practices Edited and contributed by an outstanding team of leading experts from industry academia and national laboratories MEMS and Microstructures in Aerospace Applications illuminates the path toward qualifying and integrating MEMS devices and instruments into future space missions and developing innovative satellite systems **Ninth International Symposium on Environmental Degradation of Materials in Nuclear Power Systems** Steve Bruemmer,Peter Ford,Gary Was,2013-10-18 This collection presents an exchange of ideas among scientists and engineers about the economic and safety concerns surrounding environmentally induced materials problems which lead to nuclear power plant outages Scientists and engineers concerned with the environmental degradation processes corrosion mechanical and radiation effects present their latest results on such topics as life extension relicensing and materials
