39th Annual Meeting of the National Council on Radiation Protection and Measurements National Council on Radiation Protection and Measurements,National Council on Radiation Protection and Measurements. Meeting,2004 **Permissible Dose: A History of Radiation Protection in the Twentieth Century** J Samuel Walker,2018-08 This scholarly text focuses on the role of U S federal agencies in radiation safety and the evolution of radiation protection regulations It traces how the principles and practices of radiation protection have changed over time in response to scientific and political developments The primary purpose is to provide a foundation to the historical background to provide adequate protection against the hazards of radiation to workers exposed in their jobs and to the general public Portions of this text include Controversy over regulating medical radiation Regulating medical uses of radiation Exploration of some radiation hazards EPA s revised occupational standards The Clean Air Act amendments and more Related products Other products produced by the U S Nuclear Regulatory Commission can be found here <https://bookstore.gpo.gov/agency/nuclear-regulatory-commission/nrc> Nuclear Power Radiation resources collection is available here <https://bookstore.gpo.gov/catalog/nuclear-power/radiation>

Radiation Safety and ALARA Considerations for the 21st Century Health Physics Society. Midyear Topical Symposium,2001 Ionizing Radiation Science and Protection in the 21st Century National Council on Radiation Protection and Measurements,2001 From Radio-phobia to Radio-euphoria Ilya Obodovskiy,2023-12-11 This book gives a detailed discussion of the initial enthusiasm triggered by the discovery of x rays and radioactive radiation which later turned into fear and repulsion in a significant part of the global population up to the 21st century After a historical review the author discusses the effect of ionizing radiation on living cells tissues and organisms He then describes the relationship between the dose of radiation and the effect it produces He shows how the dose effect dependence is measured and what models of describing such dependences are used He also discusses how radiation acts on living organisms disorders in the genetic apparatus mutation formation and so on The book also includes detailed descriptions of the results of numerous health studies of large groups of people who for one reason or another were exposed to low doses of ionizing radiation including those that significantly exceed the natural radiation background The author concludes that low doses of radiation are safe and can even be beneficial as known from medical radiation treatment and also that the natural radiation background is necessary for the normal growth and development and well being of a living organism The author also discusses cases and effects of large doses arguing however that dangerous doses of radiation are very unlikely This book challenges radio phobia It not only offers arguments helping to overcome an unreasonable fear but based on the latest understanding of science argues to gradually move back not to the former radio euphoria but to a new conscious attitude towards radiation

Radiation Protection for Procedures Performed Outside the Radiology Department National Council on Radiation Protection and Measurements, 2000 Provides practical recommendations on how to protect workers while performing X ray procedures outside the radiology department Coverage includes radiologic examinations in the cardiac catheterization laboratory and in the operating room sources of exposure to workers personal monitoring and administrative responsibilities There is no coverage of exposures from nuclear medicine or radiation therapy Appendices overview the nature of the biological effects of ionizing radiation and discuss basic medical imaging Includes a glossary Useful for clinical staff who conduct medical procedures radiation protection staff and those responsible for developing employee education and training programs Annotation copyrighted by Book News Inc Portland OR

Setting Standards for Radiation Protection, 1996 In 1950 the International Commission on Radiation Protection ICRP recommended that certain radiation effects are irreversible and cumulative Furthermore the ICRP strongly recommended that every effort be made to reduce exposures to all types of ionizing radiations to the lowest possible level Then in 1954 the ICRP published its assumption that human response to ionizing radiation was linear with dose together with the recommendation that exposures be kept as low as practicable These concepts are still the foundation of radiation protection policy today even though as Evans has stated The linear non threshold LNT model was adopted specifically on a basis of mathematical simplicity not from radio biological data Groups responsible for setting standards for radiation protection should be abreast of new developments and new data as they are published however this does not seem to be the case For example there have been many reports in scientific peer reviewed and other publications during the last three decades that have shown the LNT model and the policy of As Low As Reasonably Achievable ALARA to be invalid However none of these reports has been refuted or even discussed by standard setting groups We believe this mandates a change in the standard setting process

An Introduction to Radiation Protection, Fifth edition Alan Martin, 2011-01-03 An Introduction to Radiation Protection is an accessible account of the nature of the hazards presented by ionizing radiation and the methods of protection for those new to the field and for the non specialist This book takes the reader through the general background to the subject the technical principles underlying the control of radiation haz

Radiation Protection Gyoujin Cho, 2013-10-02 Radiation Protection A Systematic Approach to Safety is a collection of papers that deals with the control management and prevention of toxic agents One paper presents design measures evaluated in a balanced program as a practicable method to lessen occupational radiation exposure Another paper cites the radiation protection aspects practiced in the decommissioning of the Fuel

Reprocessing Plant at Trombay which was designed to chemically process irradiated nuclear fuel One paper describes a methodology to evaluate a collective dose of exposure through different routes following the release of radioactive material into the atmosphere These routes include 1 inhalation of the material from the initial cloud or that arising from the ground 2 external irradiation from radioactive decay of the material in the cloud or in the air 3 and as ingestion of radionuclides transferred through the food chain One paper compares the chemical and radiation hazards to man using an analytical model based on radiation biological concepts at the molecular level to show the effects of other agents The analytical model is also capable of predicting that a synergistic interaction between two different mutagenic agents can occur at the molecular level The collection will prove useful for nuclear physicists and scientists occupational health professionals and researchers in the field of nuclear medicine and engineering

[Review of the Current State of Radiation Protection Philosophy](#) National Council on Radiation Protection and Measurements, 1975 This report is a position statement of the National Council on Radiation Protection and Measurements NCRP on issues that have emerged as a result of the recent 1972 publication of reports by the United Nations Scientific Committee on the Effects of Atomic Radiation and the National Academy of Sciences Advisory Committee on the Biological Effects of Ionizing Radiations treating the estimation of the risks arising from exposure to ionizing radiation Although these recently published materials have essentially reached the same numerical results for radiation levels at which observations are available there have been differences in philosophy and divergent conclusions regarding the estimation of the risk associated with low level low dose rate radiation for which little or no data are available Further and perhaps more importantly widely varying interpretations of the significance and meaning of these reports and conclusions have been formulated In an endeavor to consider carefully the implications of the various new recommendations in relation to current NCRP radiation protection philosophy the Board of Directors of the Council determined to undertake an intensive analysis of the published materials and the underlying background To initiate this work the NCRP constituted the Ad Hoc Committee on Comparison of Radiation Protection Philosophies The Committee developed background material for consideration of this topic by the Board of Directors of the Council The Board determined that a formulation of the NCRP's position would

constitute an important contribution and utilizing the material developed by the Ad Hoc Committee together with review by the Council produced this report From Preface page iii
