Rationing In Medicine Ethical Legal And Practical Aspects:

Rationing in Medicine F. Breyer, H. Kliemt, F. Thiele, 2013-03-09 The book series on the ethics of science and technology assessment edited by the Europäische Akademie is devoted to the publication of the work reports of its project groups works on the foundations of ethics the philosophy science and other issues related to the work of the Europäische Akademie In addition the series comprises the proceedings of conferences organized by the academy The 13th volume documents the proceeding of the academy's spring symposium in 2000 on Rationing in Medicine which was held in Bad Neuenahr Ahrweiler on March 23-25 2000 An intense discussion on the future of health care in Europe has been stimulated by increasing difficulties of securing adequate and needs orientated medical care in the face of scarce resources and medical progress Unfortunately quite often a rational discussion of rationing is drowned out by the political talk of the day But only an open and well informed debate if anything at all can lead to transparent and just rationing procedures which eventually might be acceptable to the public at large For this debate much can be learnt from observing the experiences other countries have made with their health care arrangements What kinds of mistakes should be avoided and what might be useful in the different states and perhaps also in the supra national context of an emerging Europe are interesting and important issues

The Routledge International Handbook of Criminal Responsibility Thomas Crofts, Louise Kennefick, Arlie Loughnan, 2024-12-23 Presenting cutting edge research and scholarship this extensive volume covers everything from abstract theorising about the meanings of responsibility and how we blame to analysing criminal law and justice responses and factors that impact individual responsibility Inviting exchanges across a burgeoning critical scholarship on criminal responsibility this Handbook showcases the diverse range of methodologies applied to the field including socio political approaches critical historical methods criminological and sociological perspectives and interdisciplinary studies bridging law and the mind sciences Spanning global networks of established and emerging scholars of responsibility for crime this book explores how we relate to one another as human beings under the spotlight of the criminal law In doing so it is hoped that the collection not only does justice to the vibrant landscape of criminal responsibility studies but inspires new directions and future synergies in this compelling field The Routledge International Handbook of Criminal Responsibility will appeal to scholars and students of criminal law criminal justice criminology sociology psychology neuroscience philosophy and socio legal studies as well as practitioners and policymakers working in related fields

Prioritization in Medicine Eckhard Nagel, Michael Lauerer, 2015-10-30 The gap between a rising demand for health care services on the one side and scarce resources on the other is leading to a growing pressure on decision making processes Hence prioritization in medicine has become an increasingly important issue for assuring stability of health systems and improving the capability of health care The present volume addresses normative dimensions of methodological and theoretical approaches the legal basis behind priority setting as well as international experiences concerning the normative framework and the process of priority setting

It also examines specific criteria for prioritization and discusses economic evaluations Contributing authors from a broad range of scientific disciplines discuss prioritization within an international dialogue

Columbia Law Review ,2004 **On the Uniqueness of Humankind** Hans-Rainer Duncker, K. Prieß, 2005-12-08 Biological and philosophical anthropologies of the 20th century keep emphasising the Sonderstellung of humans among the realm of living beings However it is not clear how this particular role should be characterised how it should be reconciled with biological findings and which theoretical and practical conclusions should be drawn from it Partly in opposition to these anthropological views on humankind biological disciplines underline the extensive similarities and common characteristics between humans and other species Apparently these biological findings concur with the criticism of anthropocentrism which is expressed in Western philosophy of nature and by ethicists To discuss these issues the Europäische Akademie organized the conference The Uniqueness of Humankind bei der Sonderstellung des Menschen The proceedings of the conference documented in this volume approached the theoretical and practical concept of the Sonderstellung against the background of present day knowledge in biosciences Furthermore by interdisciplinary efforts an attempt was made to clarify those conceptual problems that arise with the idea of the uniqueness of humankind The present volume partly takes up and further develops topics that have been raised by volume 15 On Human Nature that was published in this series in 2002

microeconomic theory is applied to formulate theoretical implications and predictions Issues discussed include the economic valuation of life and health moral hazard in health care utilization supplier induced demand the search for remuneration systems with favorable incentives risk selection in health insurance markets and technological change in medicine

Enabling Social Europe B. Maydell v.,K. Borchardt,K.-D. Henke,R. Leitner,R. Muffels,M. Quante,P.-L. Rauhala,G. Verschraegen,M. Zukowski,2006-02-03 Enabling Social Europe examines how the paradigm of the enabling welfare state might offer a new perspective for European social policy in the decades to come The enabling concept is perceived as going beyond that of mere activation thus also embracing policies aimed at increasing personal autonomy individual responsibility and social inclusion by endowing individuals with the resources and capabilities needed to manage and balance their life courses in a better way The study is distinguished by a unique collaboration of social and economic policy experts coming from a wide range of disciplines economics law sociology political science and philosophy The authors seek to shed new light on whether European social policy ought to play a role in the future and if so what sort of role that could be They convincingly argue that despite an implicit normative consensus on the European social model there is still room for a multifaceted world in which welfare regimes can maintain their own path dependent ways of achieving a fair and just society with a high level of welfare for all The empirical part of the book contains an appraisal of policies and reforms with a view to the enabling welfare state approach in four important policy areas health care old age security family policy and poverty prevention Within each sector the authors compare the policies and practices of two countries attributable to different regime types Germany and the United Kingdom Poland and Germany Finland and Estonia and Belgium and Denmark This book is highly recommendable not only for scholars and policymakers active in this field but also for students of welfare and labour economics sociology social policy political science and law Business Ethics of Innovation Gerd

Hanekamp,2007-05-06 Firms that operate in a market economy often depend upon innovations in order to achieve competitive advantages that sustainably secure their survival Business ethics is thus largely concerned with questions about the decisional freedoms involved in innovation processes Innovations oftentimes raise novel questions about the role of the state or the structure of society Business ethics needs to provide a framework for balancing the different perspectives values and interests at stake This balance must be achieved at the level of the firm in order to facilitate adequate long term decisions but it should also be sought at higher including regulatory levels Achieving this balance will require an ethical framework for entrepreneurial action The particular disciplines engaged in generating innovations as well as all relevant fields of applied ethics should be involved in the balancing process Business Ethics of Innovation is thus necessarily an interdisciplinary endeavour This volume assesses general questions of how business ethics can help to structure innovations and specifically discusses pharmaceutical innovations as well as innovations in the IT sector **Functional Foods** R. Chadwick,S. Henson,B. Moseley,G. Koenen,M. Liakopoulos,C. Midden,A. Palou,G. Rechkemmer,D. Schröder,A. von

Wright,2013-03-09 The Europäische Akademie is concerned with the study of scientific and technological advances for the individual society and the natural environment The work of the academy is interdisciplinary drawing on relevant academic disciplines so far as they can inform the debate on consequences and suggest solutions This book is dedicated to the issue of Functional Foods a rather topical issue with important ramifications for the overall quality of life It is the result of the Europäische Akademie's working group Functional Foods which worked from January 2001 to June 2003 Since the times of Hippocrates we view food as our medicine and medicine as our food a view that is confirmed by nowadays science which agrees that diet is related to health well being and the prevention of disease At the same time food related diseases have reached epidemic proportions in western societies while obesity is spreading rapidly in all parts and strata of modern society The cost for the health system is significant while the reduction in quality of life is immeasurable Low Dose Exposures in the Environment C. Streffer,H. Bolt,D. Follesdal,P. Hall,J.G. Hengstler,P. Jacob,D Oughton,K. Prieß,E. Rehbinder,E. Swaton,2013-11-11 The ever increasing release of harmful agents due to human activities have led in some areas of the world to heavy pollution In order to protect human health and the environment environmental standards that shall limit the release and the concentration of those toxic agents in the environment and hence the exposure to it have to be established The related assessment and decision making procedures have to be based on solid scientific data about the effects and mechanisms of these agents as well as on ethical social and economic aspects For risk evaluation the knowledge of the dose response curve is an essential prerequisite Dose responses without a threshold dose are most critical in this connection Such dose responses are assumed for mutagenic and carcinogenic effects which therefore dominate also the discussion in this book In the environmentally important low dose range risk estimation can only be achieved by extrapolation from higher doses with measurable effects The extrapolation is accompanied with uncertainties which makes risk evaluation as well as risk communication frequently problematic In order to ensure rational efficient and fair decisions beyond a sound scientific assessment the dialogue between disciplines with the affected people and with the general public is necessary In this book the whole range of relevant and essential aspects of risk evaluation and standard setting is addressed Starting with the ethical foundations the sound analysis of recent scientific findings sets the frame for further reflections by theory of cognition psychosocial sciences and jurisprudence The authors end up with concluding recommendations for coping with the recent problems of standard setting in the field of environmentally relevant low doses The book is designed to a readership of scientists legislators administrators and the interested public **Pharming** Eckard Rehbinder,Margret Engelhard,Kristin Hagen,R. B. Jørgensen,Rafael Pardo Avellaneda,Angelika Schnieke,Felix Thiele,2008-09-27 Recent scientific advances have made it possible to produce biopharmaceuticals in genetically modified plants and animals such as maize tobacco goats and chickens This new branch of biotechnology is termed pharming composed of the terms pharmaceuticals and farming Pharming constitutes an overlap of red and green biotechnology It offers the prospect of a quicker cheaper and more flexible

production of biopharmaceuticals compared with current production processes This is a promising perspective in light of the rapidly growing market of biopharmaceuticals although the economic competitiveness of pharming remains to be proven Besides possible benefits for producers patients and health care systems pharming also raises a number of complex ecological social moral and legal questions that have as yet not been thoroughly discussed The present book contains the findings of an interdisciplinary research project that has addressed a large range of questions associated with pharming An analysis of the state of the art of plant pharming and animal pharming technologies is followed by an assessment of environmental risks related to pharming and welfare risks for pharming animals Public views and attitudes to pharming are investigated on the basis of a comprehensive survey in 15 countries Moreover ethical and legal questions posed by present and foreseeable future practices of pharming are analysed The concluding chapter presents the authors main findings and recommendations addressed to science industry politics and general public interested in the chances and risks of this upcoming field of biotechnology

Aging Harry R. Moody, Jennifer R. Sasser, 2017-01-12 Presenting current research in an innovative text reader format *Aging Concepts and Controversies Ninth Edition* encourages students to become involved and take an informed stand on the major aging issues we face as a society Not simply a summary of research literature this text focuses on controversies and questions rather than on assimilating facts or arriving at a single correct view about aging and older people Drawing on their extensive expertise the authors first provide an overview of aging in three domains aging over the life course health care and the socioeconomic aspects of aging Each section is followed by a series of edited readings offering different perspectives from experts and specialists on that subject

Balancing Renewable Electricity Bert Droste-Franke, Boris P. Paal, Christian Rehtanz, Dirk Uwe Sauer, Jens-Peter Schneider, Miranda Schreurs, Thomas Ziesemer, 2012-01-21 An important aim behind the restructuring of Germany's and Europe's electricity systems is to reduce the environmental burden especially with respect to greenhouse gas emissions of the current systems Emissions must be brought down to a level that is sustainable in the long run and consistent with greenhouse gas emission reduction goals Meeting these goals will require a system as best as current knowledge suggests that will be able to cope simultaneously with the fundamental demands for economic efficiency environmental sustainability and supply security Making use of existing scenarios this study sketches such a system It focuses in particular on auxiliary systems such as energy storage methods and network extensions The study introduces technologies that can balance electricity in energy systems and that can serve as enabling technologies for the integration of large quantities of renewable energies in the power supply system It begins with a discussion of normative aims for the future electricity system before continuing with a description of current policies and political developments and an overview of relevant existing energy system studies These sections serve as background for the remainder of the study They are followed by discussion and analysis of the growing demand for means to balance the fluctuations found in electricity generated in power systems with a high penetration of renewable energies the

potentials of diverse technologies requirements for electrical networks economic impacts and important legal issues Finally the main challenges to the achievement of developing balancing technologies and processes for renewable electricity dominant systems are summarised and recommendations made

Environmental Standards Christian Streffer,Josef B cker,Adrienne Cansier,Dieter Cansier,Carl Friedrich Gethmann,Robert Guderian,Gerd Hanekamp,Dietrich Henschler,Gerald P ch,Eckard Reh binder,Ortwin Renn,Marco Slesina,Kerstin Wuttke,2013-06-29 The rapid growth of the world population nearly six fold over the last hundred years combined with the rising number of technical installations especially in the industrialized countries has lead to ever tighter and more strained living spaces on our planet Because of the inevitable processes of life man was at first an exploiter rather than a careful preserver of the environment Environmental awareness with the intention to conserve the environment has grown only in the last few decades Environmental standards have been defined and limit values have been set largely guided however by scientific and medical data on single exposures while public opinion on the other hand now increasingly calls for a stronger consideration of the more complex situations following combined exposures Furthermore it turned out that environmental standards while necessarily based on scientific data must also take into account ethical legal economic and sociological aspects A task of such complexity can only be dealt with appropriately in the framework of an inter disciplinary group

Intervening in the Brain Reinhard Merkel,G. Boer,J. Fegert,T. Galert,D. Hartmann,B. Nuttin,S. Rosahl,2007-07-28 The wealth of insights into the brain s functioning gained by neuroscience in recent years led to the development of new possibilities for intervening in the brain such as neurotransplantation neural prostheses and brain stimulation techniques Moreover new and safer classes of psychopharmaceutical drugs lend themselves to neuroenhancement applications i e they could be used to enhance cognitive capacities or emotional well being without therapeutic need This book offers extensive state of the art accounts for these novel kinds of intervention indicates future developments and discusses the relevant philosophical ethical and legal issues

Genetic Engineering in Livestock Margret Engelhard,Kristin Hagen,Matthias Boysen,2008-10-20 Recently the first zoopharming product has reached market approval it is a recombinant human protein for medical use that is produced in the milk of transgenic goats In addition other transgenic animals including faster growing salmon and environmentally friendly pigs with reduced levels of phosphate in their faeces are awaiting regulatory approval These are only some examples of upcoming applications of genetic engineering in farm animals Other potential applications include traditional breeding goals such as higher milk or meat yields leaner meat and disease resistance While genetic engineering in livestock opens a huge range of possibilities it also brings about concerns of safety and justification does genetic engineering affect animal welfare Is it safe and morally acceptable to apply genetic engineering to farm animals for the various purposes that are envisaged

Bridges between Science, Society and Policy Michael Decker,Miltos Ladikas,2013-03-09 The Europaische Akademie zur Erforschung von Folgen wissenschaftlich technischer Entwicklungen Bad Neuenahr Ahrweiler GmbH european academy

is concerned with the scientific study of the consequences of scientific and technological advance for the individual and social life and for the natural environment. The main focus is to examine foreseeable mid and long term processes that are especially influenced by natural and engineering sciences and the medical disciplines. The academy fulfills this task by organizing interdisciplinary expert discussions. Another important issue of the work of the Europäische Akademie concerns the methodology of Technology Assessment as a general issue. This is the main reason that the European academy organized during the past two years a project funded by the European Commission on Technology Assessment Methods and Impact TAMI. Together with partners from all over Europe a common understanding of what Technology Assessment TA is supposed to do was developed. Most importantly it was acknowledged that the core of any TA activity has to be a sound scientific understanding of the relevant phenomena. Communication then is of cordial importance to reach the relevant decision makers as well as the general public. It is true that this phase of the TA process has been treated with too little attention for many years. The communication processes between scientific advisers and policy makers have hence to be further scrutinized.

Embryo Research in Pluralistic Europe D. Solter, D. Beylerveld, M.B. Friele, J. Holówka, H. Lilie, R. Lovell-Badge, C. Mandla, U. Martin, R. Pardo Avellaneda, 2013-03-09

Recent advances in techniques and understanding in the fields of genetics, embryology and reproductive biology have opened up new ways to treat a wide range of medical problems. They range from new options for infertility treatment and pre implantation genetic diagnosis to stem cell based therapies for debilitating diseases. Since all these approaches involve the manipulation of human gametes, embryos or embryonic cells and could also permit more contentious uses, they have stimulated a controversial debate as to what aims are desirable and to what extent experiments on human embryos are morally permissible, if permissible at all. The situation is further complicated by the fact that scientific projects are increasingly realized through international co operation and that patients are increasingly ready to seek morally contentious medical treatment wherever it is available and thus to bypass national legislation. In view of this situation the Europäische Akademie assembled a temporary interdisciplinary project group in which scientists from universities and non university research organizations in Europe working on the relevant subjects were brought together and charged with establishing a knowledge base and providing suggestions for long term solutions that would be acceptable for society. Presented here are the results of this project ranging from a discussion of the theoretical and practical possibilities in human embryo experimentation and its alternatives in research on adult stem cells, a comparison of the situations and prospects of regulation of embryo research in Europe, a survey of European public attitudes and a philosophical analysis of the arguments and argumentative strategies used in the debate.
