Reactive Extraction:

Reactive Extraction Hans-Jörg Bart, 2013-04-17 This booklet is designed to bridge the gap between handbooks and technical literature and aims at graduate students or experienced readers Commercial flow sheeting simulation software is increasingly available and is used in the early steps of process design in industry As to this more sophisticated and precise models based on activities instead of concentrations should be used After an introductory chapter there is in Chapter 2 an intensive discussion of reactive phase equilibria of ionic and non ionic solutes based on chemical potentials Chapter 3 introduces to multicomponent diffusion and mass transfer However the main focus is on the reactive mass transfer on rigid and mobile surfaces where the interfacial reaction molecular diffusion and adsorption layers are decisive The respective extraction of zinc with a cation exchanger and of acetic acid with an anion exchanger is discussed as case studies Since adsorption layers and surfactants have a major impact on liquid liquid extraction efficiency the final chapter reviews several techniques which make use of polymeric species in an extractive process A short review is also given on extraction apparatus and the hydrodynamics hydraulic design droplet population balances of columns Much of the booklet is based on the PhD works of C Czapla 2000 G Modes 2000 H Klocker 1996 T Kronberger 1995 M Marters 2000 M Roos 2000 M Traving 2000 and B Wachter 1996 who I wish to thank for their fruitful contributions *Intensification of Biobased Processes* Andrzej Górak, Andrzej Stankiewicz, 2018-06-18 In recent years bioprocessing has increased in popularity and importance however bioprocessing still poses various important techno economic and environmental challenges such as product yields excessive energy consumption for separations in highly watery systems batch operation or the downstream processing bottlenecks in the production of biopharmaceutical products Many of those challenges can be addressed by application of different process intensification technologies discussed in the present book The first book dedicated entirely to this area *Intensification of Biobased Processes* provides a comprehensive overview of modern process intensification technologies used in bioprocessing The book focusses on four different categories of biobased products bio fuels and platform chemicals cosmeceuticals food products and polymers and advanced materials It will cover various intensification aspects of the processes concerned including bio reactor intensification intensification of separation recovery and formulation operations and process integration This is an invaluable source of information for researchers and industrialists working in chemical engineering biotechnology and process engineering **Mass Transfer** A. Processing of Heavy Crude Oils

Ramasamy Marappa Gounder, 2019 Unconventional heavy crude oils are replacing the conventional light crude oils slowly but steadily as a major energy source Heavy crude oils are cheaper and present an opportunity to the refiners to process them with higher profit margins However the unfavourable characteristics of heavy crude oils such as high viscosity low API gravity low H C ratio chemical complexity with high asphaltenes content high acidity high sulfur and increased level of metal and heteroatom impurities impede extraction pumping transportation and processing Very poor mobility of the heavy oils due to very high viscosities significantly affects production and transportation Techniques for viscosity reduction drag reduction and in situ upgrading of the crude oil to improve the flow characteristics in pipelines are presented in this book The heavier and complex molecules of asphaltenes with low H C ratios present many technological challenges during the refining of the crude oil such as heavy coking on catalysts Hydrogen addition and carbon removal are the two approaches used to improve the recovery of value added products such as gasoline and diesel In addition the heavy crude oil needs pre treatment to remove the high levels of impurities before the crude oil can be refined This book introduces the major challenges and some of the methods to overcome them

Kiss, 2014-03-15 This book is among the first to address the novel process intensification technologies for biodiesel production in particular the integrated reactive separations It provides a comprehensive overview illustrated with many industrially relevant examples of novel reactive separation processes used in the production of biodiesel e g fatty acid alkyl esters reactive distillation reactive absorption reactive extraction membrane reactors and centrifugal contact separators Readers will also learn about the working principles design and control of integrated processes while also getting a relevant

and modern overview of the process intensification opportunities for biodiesel synthesis Biodiesel is a biodegradable and renewable fuel that currently enjoys much attention In spite of the recent advances the existing biodiesel processes still suffer from problems associated with the use of homogeneous catalysts e g salt waste streams and the key limitations imposed by the chemical reaction equilibrium thus leading to severe economic and environmental penalties The integration of reaction and separation into one operating unit overcomes equilibrium limitations and provides key benefits such as low capital investment and operating costs Many of these processes can be further enhanced by heat integration and powered by heterogeneous catalysts to eliminate all conventional catalyst related operations using the raw materials efficiently and the reaction volume while offering high conversion and selectivity and significant energy savings The targeted audience of this book includes both academia students and researchers and industry project leaders technology managers researchers biodiesel producers and equipment suppliers
