Pirozzolo,Merlin C. Wittrock,2013-10-22 Neuropsychological and Cognitive Processes in Reading explores reading and reading disabilities within the context of cognitive psychology and neuropsychology Emphasis is on the roles of brain mechanisms in reading and reading disturbances In the areas of perception and cognition theoretical models of the reading process are used to highlight the various psychological processes involved in the act of skilled reading Comprised of 12 chapters this volume begins with an introduction to the fundamental processes of reading giving particular attention to a psychological theory that builds on two concepts that the basic processes of reading are few in number and that they are separable from one another A useful and testable information processing model of reading that consists of three separable fundamental processes decoding word meaning and sentence comprehension is described Subsequent chapters deal with some of the external and internal factors involved in reading a model of disorders of reading comprehension the alexias the neuropsychological test performance of brain damaged and non brain damaged dyslexic children and the problem of subtypes of learning disability Eye movements and perceptual spans in reading are also discussed along with reading comprehension and the problem of agrammatism The final chapter analyzes the factors that influence recovery from alexia This book will be of interest to neuropsychologists and those engaged in neurolinguistics psycholinguistics cognitive psychology and educational psychology **Current Catalog** National Library of Medicine (U.S.),1966 First multi year cumulation covers six years 1965 70 **The Nature of Learning Disabilities** Kenneth A. Kavale,Steven R. Forness,2012-12-06 The category of learning disabilities continues to be among the most contentious in special education Much of the debate and dissent emanates from a lack of understanding about its basic nature The failure to evolve a comprehensive and unified perspective about the nature of learning disabilities has resulted in the concept being lost The loss is best illustrated through the failure to answer this seemingly simple question What is a learning disability Using historical empirical theoretical conceptual and philosophical analyses this volume explores a number of problems and issues facing the field of learning disabilities The chapters cover historical influences definitional problems primary characteristics assessment practices theoretical development major themes research and measurement models and long term outcomes The goal is to explicate the nature of learning disabilities by analyzing what it was supposed to be what it has become and what it might be A predominant theme running through this text is the necessity for the field of learning disabilities to regain integrity by recapturing its essence **Routledge Library Editions: Special Educational Needs** Various,2021-07-29 This set of 62 volumes originally published between 1951 and 1999 amalgamates a wide breadth

of literature on Special Educational Needs with a particular focus on inclusivity class management and curriculum theory This collection of books from some of the leading scholars in the field provides a comprehensive overview of the subject how it has evolved over time and will be of particular interest to students of Education and those undertaking teaching qualifications

Fluency in Reading Zvia Breznitz,2006-08-15 This is the first book to examine in depth the crucial role of the speed of information processing in the brain in determining reading fluency in both normal and dyslexic readers Part I explains fluency in reading from both traditional and modern perspectives Fluency has historically been viewed as the outcome of other reading related factors and has often been seen as a convenient measure of reading skills This book however argues that fluency has a strong impact on other aspects of reading and plays a central role in the entire reading process Part II deals with the determinants of reading fluency Chief among these is the speed of information processing in the brain Using both behavioral and electrophysiological evidence the book systematically examines the features of processing speed in the various brain systems involved in reading visual orthographic auditory phonological and semantic and shows how speed of processing affects fluency in reading Part III deals with the complex

issues of cross modal integration and specifically with the need for effective synchronization of the brain processes involved in reading It puts forward the Synchronization Hypothesis and discusses the role of the Asynchrony Phenomenon as a major factor in dyslexia Finally it summarizes research on manipulating reading rate by means of the Acceleration method providing evidence for a possible intervention aimed at reducing Asynchrony Key features of this outstanding new book include Expanded View of Fluency Reading fluency is seen as both a dependent and an independent Variable Currently available books focus on reading rate solely as the outcome of other factors whereas this volume stresses that it is both an outcome and a cause Information Processing Focus Fluency itself is determined to a large extent by a more general factor namely speed of processing in the brain The book presents wide ranging evidence for individual differences in speed of processing across many subpopulations Brain Synchronization Focus The book posits a new theory arguing that effective reading requires synchronization of the different brain systems visual orthographic auditory phonological and semantic Research Based Interventions Interventions to enhance fluency and thereby reading skills in general are presented in detail Author Expertise Zvia Breznitz is Head of the Department of Learning Disabilities and Director of the Laboratory for Neurocognitive Research at Haifa University in Israel where she has been researching this topic for over a decade This book is appropriate for researchers and advanced students in reading dyslexia learning disabilities cognitive psychology and neuropsychology Handbook of Children's Literacy Terezinha Nunes, Peter Bryant, 2013-03-09 PETER BRYANT

TEREZINHA NUNES The time that it takes children to learn to read varies greatly between different orthographies as the chapter by Sprenger Charolles clearly shows and so do the difficulties that they encounter in learning about their own orthography Nevertheless most people who have the chance to learn to read do in the end read well enough even though a large number experience some significant difficulties on the way Most of them eventually become reasonably efficient spellers too even though they go on make spelling mistakes at any rate if they are English speakers for the rest of their lives So the majority of humans plainly does have intellectual resources that are needed for reading and writing but it does not always find these resources easy to marshal What are these resources Do any of them have to be acquired Do different orthographies make quite different demands on the intellect Do people differ significantly from each other in the strength and accessibility of these resources If they do are these differences an important factor in determining children's success in learning to read and write These are the main questions that the different chapters in this section on Basic Processes set out to answer **Textbook of Developmental Pediatrics** Marvin I. Gottlieb, Janice E. Williams, 2013-11-11 Child adolescent development and behavior have been a traditional concern of primary health care providers However it was not until the mid 1960s that attempts were made to consolidate developmental behavioral issues into an identifiably distinct fund of medical knowledge During the ensuing two decades developmental behavioral pediatrics was recognized as a clinical and research subspecialty within the framework of comprehensive health care for children The influence of public advocacy groups topic

dedicated journals national professional specialty societies subject related continuing education programs and federal legislation PL94 142 has served to crystallize developmental behavioral pediatrics as a specialized field of study As a consequence during the past ten years significant modifications have restructured medical student and pediatric resident education providing an emphasis on developmental behavioral issues The focus on neurodevelopmental educational and psychosocial issues reflects changing priorities in traditional health care for children The postgraduate training of pediatric fellows in two and three year training programs was initiated to accommodate professional manpower needs in both academic and practice settings Many of the problems in childhood development and behavior frequently span the traditional areas of child neurology child psychiatry and general pediatrics As a result there has been some confusion in demarcating professional responsibilities in diagnosis and management as well as poorly defined terminology and classification schemas With the birth of developmental pediatrics as a pediatric specialty a more cohesive fund of knowledge has been accumulated and more meaningful strategies have been designed for prevention diagnosis and management

Visual Processes in Reading and Reading Disabilities Dale M. Willows, Richard Kruk, Evelyne Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership
