The Internet has changed our lives, putting a world of opportunity before us. Unfortunately, it has also put a world of opportunity into the hands of those whose motives are less than honorable. A firewall, a piece of software or hardware that erects a barrier between your computer and those who might like to invade it, is one solution. If you've been using the Internet for any length of time, you've probably received some unsavory and unsolicited e-mail. If you run a business, you may be worried about the security of your data and your customers' privacy. At home, you want to protect your personal information from identity thieves and other shady characters. **Firewalls For Dummies** will give you the lowdown on firewalls, then guide you through choosing, installing, and configuring one for your personal or business network. **Firewalls For Dummies** helps you understand what firewalls are, how they operate on different types of networks, what they can and can't do, and how to pick a good one.
