Seeing Contour And Colour:

Seeing Contour and Colour J. J. Kulikowski, C. M. Dickinson, I. J. Murray, 1989 **The Visually Responsive Neuron** T. Philip Hicks, S. Molotchnikoff, Taketoshi Ono, 1993 This timely new volume presents broad based and wide ranging contributions on all aspects of vision The material is grouped for presentation in a logical fashion in five main themes peripheral processing sensory integration in superior colliculus organization of visual projections development and plasticity and neuronal encoding and visually guided behavior The material spans from molecules to cognition including overt behavior and synaptic and membrane levels of analysis The species studied also range over diverse phyla while contributors too form a diverse group representing Europe North America and Asia The Visually Responsive Neuron is an exciting and informative addition to the well known Progress in Brain Research series **Colour Vision Deficiencies XII** B. Drum, 2012-12-06 From the 98 presentations of the XIIth Symposium on Colour Vision Deficiencies 61 were selected after peer review and revision by the authors In addition to these contributions this volume contains a cumulative index to all authors in the IRGCVD proceedings since the first one in 1968 including the present volume The contents include contributions on basic questions of anatomical and electrophysiological organisation of the neural pathways underlying colour vision and on ways in which disturbances of these pathways can produce acquired colour vision deficiencies Further contributions deal with genetics and congenital red green colour deficiencies and colour vision testing The resulting publication contains much of interest to basic vision scientists as well as to specialists in colour vision deficiencies **Colour Vision Deficiencies X** B. Drum, J.D. Moreland, A. Serra, 2012-12-06 Since its inception the International Research Group on Colour Vision Deficiencies IRGCVD has followed the policy that the Symposium Proceedings should be as close as possible to a complete record of the scientific content of the meeting This policy has the advantage of providing an accurate picture of the current state of the art in research on color vision deficiencies but it also has the disadvantage that papers typically span a wide range of quality In this volume however we have instituted a system of peer review in an effort to enhance scientific quality as much as possible while continuing our past policy of publishing all submitted manuscripts In addition to being edited for English composition and grammar each of the papers included here has been carefully reviewed by an IRGCVD member selected for his or her expertise in the specific topic of the paper Reviewers were instructed to include in their comments suggestions for improvement rather than recommendation or rejection In our opinion this review process recommendations for publication has resulted in substantial improvement of many of the articles and has enhanced the value of the publication We are pleased to acknowledge the efforts of our reviewers and offer them our sincere thanks for their important contributions to Colour Vision Deficiencies X The Editors B Drum J D Moreland A Serra eds Colour Vision Deficiencies X p xiii **Representations of Vision** Andrei Gorea, 1991-04-26 This stimulating volume on vision extends well beyond the traditional areas of vision research and places the subject in a much broader philosophical context The emphasis throughout is to integrate and

illuminate the visual process The first three parts of the volume provide authoritative overviews on computational vision and neural networks on the neurophysiology of visual cortex processing and on eye movement research Each of these parts illustrates how different research perspectives may jointly solve fundamental problems related to the efficiency of visual perception to the relationship between vision and eye movements and to the neurophysiological codes underlying our visual perceptions In the fourth part leading vision scientists introduce the reader to some major philosophical problems in vision research such as the nature of ultimate codes for perceptual events the duality of psycho physics the bases of visual recognition and the paradigmatic foundations of computer vision research **Colour Vision** Evan Thompson,2003-09-02 Cognitive Science is a major up coming area very popular courses Up to date review of latest research Author was co author of important book translated into 4 languages since 1991 Ecological approach so neither objectivist nor subjectivist

Baraas,N. Justin Marshall,2016-12-06 Our understanding of human color vision has advanced tremendously in recent years helped along by many new discoveries ideas and achievements It is therefore timely that these new developments are brought together in a book assembled specifically to include new research and insight from the leaders in the field Although intentionally not exhaustive many aspects of color vision are discussed in this Springer Series in Vision Research book

including the genetics of the photopigments the anatomy and physiology of photoreceptors retinal and cortical pathways color perception the effects of disorders theories on neuronal processes and the evolution of human color vision Several of the chapters describe new state of the art methods within genetics morphology imaging techniques electrophysiology psychophysics and computational neuroscience The book gives a comprehensive overview of the different disciplines in human color vision in a way that makes it accessible to specialists and non specialist scientists alike About the Series The Springer Series in Vision Research is a comprehensive update and overview of cutting edge vision research exploring in depth current breakthroughs at a conceptual level It details the whole visual system from molecular processes to anatomy physiology and behavior and covers both invertebrate and vertebrate organisms from terrestrial and aquatic habitats Each book in the Series is aimed at all individuals with interests in vision including advanced graduate students post doctoral researchers established vision scientists and clinical investigators The series editors are N Justin Marshall Queensland Brain Institute The University of Queensland Australia and Shaun P Collin Neuroecology Group within the School of Animal Biology and the Oceans Institute at the University of Western Australia *Colour Vision Deficiencies IX* B. Verriest,2012-12-06 Proceedings of the Ninth symposium of the International Research Group on Colour Vision Deficiencies held at St John s College Annapolis MD July 1 3 1987 *Vision and Art with Two Eyes* Nicholas Wade,2023-06-02 This book celebrates binocular vision by presenting illustrations that require two eyes to see the effects of cooperation and competition between them Pictures are flat but by printing them in different colours and viewing them through similarly coloured filters included with the hardcover book they are brought to life either in stereoscopic depth or in rivalry with one another They are called anaglyphs and all those in the book display the ways in which the eyes interact Thus the reader is an integral element in the book and not all readers will see the same things The history science and art of binocular vision can be experienced in ways that are not usually available to us and with images made specifically for this book The study of vision with two eyes was transformed by the invention of stereoscopes in the early 19th century Anaglyphs are simple forms of stereoscopes that have three possible outcomes from viewing them with each eye alone to see the monocular images with both eyes to see them in stereoscopic depth or rivalry or without the red cyan glasses where they can have an appeal independent of the binocularity they encompass Through the binocular pictures and the words that accompany them there will be an appreciation of just how remarkable the processes are that yield binocular singleness and depth Moreover the opportunities for expressing these processes are explored with many examples of truly binocular art **Readings on Color, Volume 2**

Alex Byrne,David R. Hilbert,1997-05-15 Color is an endlessly fascinating subject to philosophers scientists and laypersons as well as an instructive microcosm of cognitive science In these two anthologies Alex Byrne and David Hilbert present a survey of the important recent philosophical and scientific writings on color The introduction to volume 1 provides a philosophical background and links the philosophical issues to the empirical work covered in volume 2 The bibliography in volume 1 is an

extensive resource for those doing philosophical work on color The scientific selections in volume 2 present work in color science that is relevant to philosophical thinking about color the material is comprehensive and sophisticated enough to be useful to the scientific reader The introduction to volume 2 is an overview of color science the volume also contains suggestions for further reading Bradford Books Imprint The Science of Color Steven K. Shevell, 2003-07-11 The Science of Color focuses on the principles and observations that are foundations of modern color science Written for a general scientific audience the book broadly covers essential topics in the interdisciplinary field of color drawing from physics physiology and psychology This book comprises eight chapters and begins by tracing scientific thinking about color since the seventeenth century This historical perspective provides an introduction to the fundamental questions in color science by following advances as well as misconceptions over more than 300 years The next chapters then discuss the relationship between light the retinal image and photoreceptors followed by a focus on concepts such as color matching and color discrimination color appearance and color difference specification the physiology of color vision the 15 mechanisms of the physics and chemistry of color and digital color reproduction Each chapter begins with a short outline that summarizes the organization and breadth of its material The outlines are valuable guides to chapter structure and worth scanning even by readers who may not care to go through a chapter from start to finish This book will be of interest to scientists artists manufacturers and students **Biology and Computation** H. Gutfreund, G. Toulouse, 1994 This book provides a comprehensive review of the works in the rapidly evolving field of neural networks and brain studies Its purpose is two fold to help physicists entering this field to get a broader view of the context of the domain and to help scientists of other disciplines to reach a better understanding of the physicists contributions within a context of perspectives they can relate to Included in the volume are 68 carefully selected high quality reprints to provide the volume with both breadth and depth It is organized into 5 sections and 22 chapters both the sections and chapters being preceded by introductory comments by the editors **The Visual System of Fish** Ron Douglas, Mustafa Djamgoz, 2012-12-06 A question often asked of those of us who work in the seemingly esoteric field of fish vision is why To some of us the answer seems obvious how many other visual scientists get to dive in a tropical lagoon in the name of science and then are able to eat their subjects for dinner However there are better or at least scientifically more acceptable reasons for working on the visual system of fish First in terms of numbers fish are by far the most important of all vertebrate classes probably accounting for over half c 22 000 species of all recognized vertebrate species Nelson 1984 Furthermore many of these are of commercial importance Secondly if one of the research aims is to understand the human visual system animals such as fish can tell us a great deal since in many ways their visual systems and specifically their eyes are similar to our own This is fortunate since there are several techniques such as intracellular retinal recording which are vital to our understanding of the visual process that cannot be performed routinely on primates The cold blooded fish on the other hand is an ideal subject for such studies and much of what we know about for

example the fundamentals of information processing in the retina is based on work carried out on fish e.g. Svaetichin 1953

Colour and Form Perception: Straddling the Boundary Galina V. Paramei, Cees van Leeuwen, 2016-05-31 Starting from psychophysics over the last 50 years most progress in unravelling the mechanisms of color vision has been made through the study of single cell responses mainly in LGN and striate cortex. A similar development in the study of form perception may seem to be underway centred on the study of temporal cortex. However because of the combinatorial characteristics of form perception we are also observing the opposite tendency from single cell activity to population coding and from static receptive field structures to system dynamics and integration and ultimately a synthetic form of psychophysics of color and form perception. From single cells to system integration it is this development the present Research Topic wishes to highlight and promote. How does this development affect our views on the various attributes of perception? In particular we are interested in to what extent evolving knowledge in the field of color perception is relevant within a developing integrative framework of form perception. The goal of this Research Topic is to bring together experimental research encompassing both color and form perception. For this volume we planned a broad scope of topics on color in complex scenes, color and form as well as dynamic aspects of form perception. We expect that the Research Topic will be attractive to the community of researchers whose work straddles the boundary between the two visual perception fields as well as to the wider community interested in integrative systems neuroscience.
