Biological Magnetic Resonance Lawrence Berliner, 2012-12-06 We have now reached our sixth volume in a series which has somewhat unintentionally become an annual event While we still intend to produce a volume only if a suitable number of excellent chapters in the forefront of biological magnetic resonance are available our philosophy is to present a pedagogical yet critical description and review of selected topics in magnetic resonance of current interest to the community of biomedical scientists This volume fulfills our goals well As always we open the volume with a chapter which directly addresses an in vivo biological problem Phil Bolton's presentation of new techniques in measuring ^{31}P NMR in cells Lenkinski's chapter on the theory and applications of lanthanides in protein studies covers the details highlights and pitfalls of analysis of these complexes in biochemical NMR Reed and Markham

summarize the interpretation of EPR spectra of manganese in terms of structure and function of proteins and enzymes
Dalton and colleagues describe the applications to biological problems of the relatively new capability of time domain ESR
Finally we are pleased to offer a departure from mainstream magnetic resonance with the comprehensive and stimulating
chapter by Gus Maki on the theory instrumentation and applications of optically detected magnetic resonance
