Diagnostic Imaging of the Nose and Paranasal Sinuses Glyn A.S. Lloyd, 2012-12-06 In the past two decades the radiological investigation and imaging of paranasal sinus disease has been revolutionised by the introduction of two new techniques magnetic resonance and computerised tomography These have made the diagnosis and localisation of neoplastic and non neoplastic

disease a far more exact process and they have completely replaced conventional pluridirectional tomography as a means of augmenting the initial plain radiographic examination of the paranasal sinuses. The recent introduction into clinical practice of the paramagnetic contrast agent gadolinium DTPA has extended further the range of magnetic resonance in the demonstration of naso sinus disease. The account which follows is an attempt to summarise present knowledge in this division of otorhinolaryngology imaging. The format of the chapters has been arranged in two halves: the initial nine chapters are concerned with investigative techniques and non-neoplastic disease, while the second half of the book is entirely devoted to benign and malignant tumours. The latter chapters are arranged according to the nomenclature proposed by my two ex-colleagues Professor I. Friedmann and the late Dr D. A. Osborn in their book *The Pathology of Granulomas and Neoplasms of the Nose and Paranasal Sinuses* (Churchill Livingstone, 1982).

Ear, Nose and Throat Histopathology Leslie Michaels, Henrik B. Hellquist, 2012-12-06 I wrote the first edition of this work in 1987 with the object of providing a review of the aetiology pathogenesis and morphological basis of diseases of the ear nose and throat Since that time important changes have taken place in the disciplines of both histopathology and otorhinolaryngology Pathology has shifted its research orientation towards a molecular one notable successes with new medical and surgical treatments in ENT have resulted in a striking expansion of that field To provide a precis of the scientific principles of a subject lying between two such mobile territories was a daunting prospect Help was indeed necessary and I welcome Henrik Hellquist as the co author of this second edition He has had a longstanding interest in both head and neck and molecular pathology and has not only produced scholarly publications but has also played an

important role in enhancing international cooperation in this combined field *Ophthalmology* Pinakin Davey, 2014-09-03
