Acute Kidney Injury: From Pathology to Phytotherapy Ya-long Feng, Wuelton Monteiro, Xuezhong Gong, Hua Chen, 2025-08-29 Acute kidney injury AKI a highly heterogeneous clinical syndrome of acute impairment of the kidney is characterized by an abrupt rise in serum creatinine concentration and a decrease in urinary output within a few hours for up to a few days It is reported that many patients die from it worldwide each year However there are currently no therapeutic drugs for treating and preventing AKI owing to the poor understanding of the pathogenesis of AKI Therefore a better understanding of the cellular and molecular mechanisms of AKI is essential and urgently required for the development of therapeutic drugs against AKI in clinics Traditional medical herb has a long history of preventing and treating AKI in clinics Recently more and more chemicals derived from traditional medical herbs effectively prevent AKI by alleviating kidney inflammation oxidative stress and apoptosis These active compounds serve as inhibitors of the significant signaling pathways involved in AKI Some of them have shown their efficiency in clinics such as anisodamine an alkaloid derived from *Anisodus tanguticus* Maxim Pascher These cases show a promising prospect in finding therapy drugs against AKI from traditional medicinal herbs However the active ingredients and mechanisms of traditional medical herbs against AKI are still poorly understood
