Patient Centered Healthcare:

Patient-Centered Healthcare Eldo Frezza, 2019-08-22 Patient centered care is a way of thinking and doing things that considers patients partners in the development of a healthcare plan designed to meet their specific needs It involves knowledge of the individual as a person and integrates that knowledge into their plan of care Patient centered care is central to the discussion of healthcare at the insurance and hospital level The quality of the service is evaluated more deeply from all the healthcare components including insurance payments It is the start of a new client and patient centered healthcare which is based on a profound respect for patients and the obligation to care for them in partnership with them Healthcare has been lacking a strategy to teach patients how to take care of themselves as much as they possibly can In countries with socialized healthcare patients don t go to the emergency room unless it is necessary they have a physician on call instead This affords more personalized care and avoids patients getting lost in the hospital system This book advocates the critical role of patients in the health system and the need to encourage healthy living We need to educate patients on how to be more self aware giving them the tools to better understand what they need to do to achieve healthy lifestyles and the protocols and policies to sustain a better life Prevention has always been the pinnacle of medical care It s time to highlight and share this approach with patients and involve them as active participants in their own healthcare This is the method on which to build the new healthcare for the next century

Patient Centered Medicine David H. Person-centred Health Care Stephen Buetow, 2016-06-10 Person centred health care is increasingly endorsed as a key element of high quality care yet in practice it often means patient centred health care This book scrutinizes the principle of primacy of patient welfare which although deeply embedded in health professionalism is long overdue for critical analysis and debate It appears incontestable because patients have greater immediate health needs than clinicians and the patient clinician encounter is often recognized as a moral enterprise as well as a service contract However Buetow argues that the implication that clinician welfare is secondary can harm clinicians patients and health system performance Revaluing participants in health care as moral equals this book advocates an ethic of virtue to respect the clinician as a whole person whose self care and care from patients can benefit both parties because their moral interests intertwine and warrant equal consideration It then considers how to move from values including moral equality in health care to practice for people in their particular situations Developing a genuinely inclusive concept of person centred care accepting clinicians as moral equals it also facilitates the coalescence of patient centred care and evidence based health care This reflective and provocative work develops a constructive alternative to the taken for granted principle of primacy of patient welfare It is of interest to students and academics in the health and caring sciences philosophy ethics medical humanities and health management
