A Pattern Language Christopher Alexander, 2018-09-20 You can use this book to design a house for yourself with your family you can use it to work with your neighbors to improve your town and neighborhood you can use it to design an office or a workshop or a public building And you can use it to guide you in the actual process of construction After a ten year silence Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will in their words lay the basis for an entirely new approach to architecture building and planning which will we hope replace existing ideas and practices entirely The three books are The Timeless Way of Building The Oregon Experiment and this book A Pattern Language At the core of these books is the idea that people should design for themselves their own houses streets and communities This idea may be radical it implies a radical transformation of the architectural profession but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people At the core of the books too is the point that in designing their environments people always rely on certain languages which like the languages we speak allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence This book provides a language of this kind It will enable a person to make a design for almost any kind of building or any part of the built environment Patterns the units of this language are answers to design problems How high should a window sill be How many stories should a building have How much space in a neighborhood should be devoted to grass and trees More than 250 of the patterns in this pattern language are given each consists of a problem statement a discussion of the problem with an illustration and a solution As the authors say in their introduction many of the patterns are archetypal so deeply rooted in the nature of things that it seems likely that they will be a part of human nature and human action as much in five hundred years as they are today A Pattern Language Christopher Alexander, Sara Ishikawa, Murray Silverstein, 1974

A Pattern Language for Sacred Secular Places Melanie Rachel Joseph, 2006 Pattern Language is a term popularized by Christopher Alexander and his co authors of the book A Pattern Language Towns Buildings Construction Sara Ishikawa and Murray Silverstein in the late 1970 s Though intended to enable every citizen to design and construct their own home pattern language never quite caught up with those in the field of architecture mostly because of its lack of flexibility The core idea of Alexander s pattern language was to arm architects designers and the common people with a tool that would empower them to make informed decisions related to designing places that would comply with their needs and wants What architecture needs the most today is the ability to heal and invigorate I believe that contemporary architecture lacks such places that enable occupants to connect and communicate with what is within and what is without A number of studies have proven that universally sacred a majority of which are religious in function places are charged with energies that could contribute towards this process The energies also referred to as patterns are the energies unique to a place that make it special and sacred not just in the religious context but also in

the secular context This thesis is an attempt to derive a new pattern language for the creation of sacred secular places like our homes and work places which draw from the pattern lists that have been proposed in four separate instances by authors including Christopher Alexander and Phillip Tabb This new pattern list is aimed at providing architects and designers with a tool for creating secular places with an element of sacrality without having to taking on a religious meaning *Project Design Patterns: 32 Patterns of Practical Knowledge for Producers, Project Managers, and Those Involved in Launching New Businesses* Takashi Iba, Fumio Kajiwarara, 2019-01-14 Architect designer Fumio Kajiwarara and pattern language expert Takashi Iba bring to life 32 patterns crucial to creating and managing innovative projects Project Design Patterns is a unique guide for producers project managers entrepreneurs and anyone involved in managing complex projects This book is a compilation of project design knowledge based on Fumio Kajiwarara architect designer chairman of UDS Ltd and his years of experience leading various renowned spatial design projects in Asia His know hows are outlined by Takashi Iba Professor at Keio University using the pattern language method a way of organizing sharing practical knowledge This book is the first case in which the pattern language method originally invented by architect Christopher Alexander is used in the context of project design Through this collaboration Project Design Patterns provides approachable but profound hints that help demystify the difficulty of carrying out innovative projects Software Patterns, Knowledge Maps, and Domain Analysis Mohamed E.
