universities **Evolution** Michael Ruse, Joseph Travis, 2009-02-28 Spanning evolutionary science from its inception to its latest findings from discoveries and data to philosophy and history this book is the most complete authoritative and inviting one volume introduction to evolutionary biology available Clear informative and comprehensive in scope Evolution opens with a series of major essays dealing with the history and philosophy of evolutionary biology with major empirical and theoretical questions in the science from speciation to adaptation from paleontology to evolutionary development evo devo and concluding with essays on the social and political significance of evolutionary biology today A second encyclopedic section travels the spectrum of topics in evolution with concise informative and accessible entries on individuals from Aristotle and Linneaus to Louis Leakey and Jean Lamarck from T H Huxley and E O Wilson to Joseph Felsenstein and Motoo Kimura and on subjects from altruism and amphibians to evolutionary psychology and Piltown Man to the Scopes trial and social Darwinism Readers will find the latest word on the history and philosophy of evolution the nuances of the science itself and the intricate interplay among evolutionary study religion philosophy and society Appearing at the beginning of the Darwin Year of 2009 the 200th anniversary of the birth of Charles Darwin and the 150th anniversary of the publication of the Origin of Species this volume is a fitting tribute to the science Darwin set in motion *Killer Instinct* Nadine Weidman, 2021-10-19 A historian of science examines key public debates about the fundamental nature of humans to ask why a polarized discourse about nature versus nurture became so entrenched in the popular sciences of animal and human behavior Are humans innately aggressive or innately cooperative In the 1960s bestselling books enthralled American readers with the startling claim that humans possessed an instinct for violence inherited from primate ancestors Critics responded that humans were inherently loving and altruistic The resulting debate fiercely contested and highly public left a lasting impression on the popular science discourse surrounding what it means to be human Killer Instinct traces how Konrad Lorenz Robert Ardrey and their followers drew on the sciences of animal behavior and paleoanthropology to argue that the aggression instinct drove human evolutionary progress Their message spread throughout popular media brought pointed ripostes Led by the anthropologist Ashley Montagu opponents presented a rival vision of human nature equally based in biological evidence that humans possessed inborn drives toward love and cooperation Over the course of the debate however each side accused the other of holding an extremist position that behavior was either determined entirely by genes or shaped solely by environment Nadine Weidman shows that what started as a dispute over the innate tendencies of animals and humans transformed into an opposition between nature and nurture This polarized formulation proved powerful When E O Wilson introduced his sociobiology in 1975 he tried to rise above the oppositional terms of the aggression debate But the controversy over Wilson s work led by critics like the feminist biologist Ruth Hubbard was ultimately absorbed back into the nature versus nurture formulation Killer Instinct explores what happens and what gets lost when polemics dominate discussions of the science of human nature *The Nature & Nurture of Love* Marga Vicedo, 2013-05-16 The notion that

maternal care and love will determine a child's emotional well-being and future personality has become ubiquitous. In countless stories and movies we find that the problems of the protagonists, anything from the fear of romantic commitment to serial killing, stem from their troubled relationships with their mothers during childhood. How did we come to hold these views about the determinant power of mother love over an individual's emotional development? And what does this vision of mother love entail for children and mothers? In *The Nature and Nurture of Love*, Marga Vicedo examines scientific views about children's emotional needs and mother love from World War II until the 1970s, paying particular attention to John Bowlby's ethological theory of attachment behavior. Vicedo tracks the development of Bowlby's work as well as the interdisciplinary research that he used to support his theory, including Konrad Lorenz's studies of imprinting in geese, Harry Harlow's experiments with monkeys, and Mary Ainsworth's observations of children and mothers in Uganda and the United States. Vicedo's historical analysis reveals that important psychoanalysts and animal researchers opposed the project of turning emotions into biological instincts. Despite those substantial criticisms, she argues that attachment theory was paramount in turning mother love into a biological need. This shift introduced a new justification for the prescriptive role of biology in human affairs and had profound and negative consequences for mothers and for the valuation of mother love.

The Three Ethologies Matthew Calarco, 2024-05-15 A transformative vision for human-animal relations on personal, social, and environmental levels. *The Three Ethologies* offers a fresh affirmative vision for rebuilding human-animal relations. Venturing beyond the usual scholarly and activist emphasis on restricting harm, Matthew Calarco develops a new philosophy for understanding animal behavior, a practice known as ethology, through three distinct but interrelated lenses: mental ethology, which rebuilds individual subjectivity; social ethology, which rethinks our communal relations; and environmental ethology, which reconfigures our relationship to the land we co-inhabit with our animal kin. Drawing on developments in philosophy, ecofeminist theory, critical geography, Indigenous studies, and the environmental humanities, Calarco casts an inspiring vision of how ethological living can help us to reimagine our ideas about goodness, truth, and beauty.

The Altruism Equation Lee Alan Dugatkin, 2022-11-29 In a world supposedly governed by ruthless survival of the fittest, why do we see acts of goodness in both animals and humans? This problem plagued Charles Darwin in the 1850s as he developed his theory of evolution through natural selection. Indeed, Darwin worried that the goodness he observed in nature could be the Achilles' heel of his theory. Ever since then, scientists and other thinkers have engaged in a fierce debate about the origins of goodness that has dragged politics, philosophy, and religion into what remains a major question for evolutionary biology. *The Altruism Equation* traces the history of this debate from Darwin to the present through an extraordinary cast of characters: from the Russian prince Petr Kropotkin, who wanted to base society on altruism, to the brilliant biologist George Price, who fell into poverty and succumbed to suicide as he obsessed over the problem. In a final, surprising turn, William Hamilton, the scientist who came up with the equation that reduced altruism to the cold language of natural selection, desperately hoped that his theory did not

apply to humans Hamilton's Rule which states that relatives are worth helping in direct proportion to their blood relatedness is as fundamental to evolutionary biology as Newton's laws of motion are to physics But even today decades after its formulation Hamilton's Rule is still hotly debated among those who cannot accept that goodness can be explained by a simple mathematical formula For the first time Lee Alan Dugatkin brings to life the people the issues and the passions that have surrounded the altruism debate Readers will be swept along by this fast paced tale of history biography and scientific discovery

Erving Goffman and the Cold War Gary D. Jaworski, 2023-08-07 Erving Goffman and the Cold War presents a provocative new reading of the work of sociologist Erving Goffman Instead of viewing him as a marginal man or academic outsider Gary D Jaworski explores Goffman as a social theorist of the Cold War Goffman was deeply connected to both the ethos of his time and to a range of cold warriors and their critics such as Edward A Shils Thomas C Schelling and the researchers on brainwashing associated with the Walter Reed Army Institute of Research among others Chapters on loyalty betrayal secrecy strategy interrogation provocation and aggression concretely illustrate these connections Erving Goffman and the Cold War shows that Goffman was much more than a microsociologist of mundane life he was a perceptive analyst of the Cold War America

Creatures of Cain Erika Lorraine Milam, 2018-12-11 How Cold War America came to attribute human evolutionary success to our species unique capacity for murder After World War II the question of how to define a universal human nature took on new urgency Creatures of Cain charts the rise and precipitous fall in Cold War America of a theory that attributed man's evolutionary success to his unique capacity for murder Drawing on a wealth of archival materials and in depth interviews Erika Lorraine Milam reveals how the scientists who advanced this killer ape theory capitalized on an expanding postwar market in intellectual paperbacks and widespread faith in the power of science to solve humanity's problems even to answer the most fundamental questions of human identity The killer ape theory spread quickly from colloquial science publications to late night television classrooms political debates and Hollywood films Behind the scenes however scientists were sharply divided their disagreements centering squarely on questions of race and gender Then in the 1970s the theory unraveled altogether when primatologists discovered that chimpanzees also kill members of their own species While the discovery brought an end to definitions of human exceptionalism delineated by violence Milam shows how some evolutionists began to argue for a shared chimpanzee human history of aggression even as other scientists discredited such theories as sloppy popularizations A wide ranging account of a compelling episode in American science Creatures of Cain argues that the legacy of the killer ape persists today in the conviction that science can resolve the essential dilemmas of human nature

Owned, An Ethological Jurisprudence of Property Johanna Gibson, 2019-12-06 This book draws upon domestication science to undertake a radical reappraisal of the jurisprudence of property and intellectual property Bringing together animal studies and legal philosophy it articulates a critique of dominant property models and relationships from the perspective of cognitive ethology domestication science and animal behaviour In doing so a radical

new picture of property emerges Focusing on the emergence of property models through prevailing ideas of human domestication and settlement the book challenges the anthropocentrism that informs standard approaches to ownership and to authorship Utilising a wide range of examples from ethology and animal studies the book thus rethinks the very nature of property as uniquely human This highly original contribution to the fields of property and intellectual property will appeal not only to legal scholars in these areas as well as in animal law but also to legal theorists and others working in the social sciences with interests in posthumanism and animal studies

Runaway Anthony Chaney,2017-08-09 The anthropologist Gregory Bateson has been called a lost giant of twentieth century thought In the years following World War II Bateson was among the group of mathematicians engineers and social scientists who laid the theoretical foundations of the information age In Palo Alto in 1956 he introduced the double bind theory of schizophrenia By the sixties he was in Hawaii studying dolphin communication Bateson's discipline hopping made established experts wary but he found an audience open to his ideas in a generation of rebellious youth To a gathering of counterculturalists and revolutionaries in 1967 London Bateson was the first to warn of a greenhouse effect that could lead to runaway climate change Blending intellectual biography with an ambitious reappraisal of the 1960s Anthony Chaney uses Bateson's life and work to explore the idea that a postmodern ecological consciousness is the true legacy of the decade Surrounded by voices calling for liberation of all kinds Bateson spoke of limitation and dependence But he also offered an affirming new picture of human beings and their place in the world as ecologies knit together in a fabric of meaning that said Bateson we might as well call Mind

Listening in the Field Joeri Bruyninckx,2024-11-26 The transformation of sound recording into a scientific technique in the study of birdsong as biologists turned wildlife sounds into scientific objects Scientific observation and representation tend to be seen as exclusively visual affairs But scientists have often drawn on sensory experiences other than the visual Since the end of the nineteenth century biologists have used a variety of techniques to register wildlife sounds In this book Joeri Bruyninckx

describes the evolution of sound recording into a scientific technique for studying the songs and calls of wild birds and asks what it means to listen to animal voices as a scientist The practice of recording birdsong took shape at the intersection of popular entertainment and field ornithology turning recordings into objects of investigation and popular fascination Shaped by the technologies and interests of amateur naturalism and music teaching radio broadcasting and gramophone production hobby electronics and communication engineering birdsong recordings traveled back and forth between scientific and popular domains to appear on gramophone recordings radio broadcasts and movie soundtracks Bruyninckx follows four technologies the musical score the electric microphone the portable magnetic tape recorder and the sound spectrograph through a cultural history of field recording and scientific listening He chronicles a period when verbal descriptions musical notations and onomatopoeic syllables represented birdsong and shaped a community of listeners later electric recordings struggled with notions of fidelity realism objectivity and authenticity scientists early citizen scientists and the recording industry negotiated recording exchange and trained listeners complemented the visual authority of spectrographic laboratory analyses This book reveals a scientific process fraught with conversions between field and laboratory sound and image science and its various audiences [Handbook of Cognitive Archaeology](#) Tracy B. Henley, Matt J. Rossano, Edward P. Kardas, 2019-07-24 The remains that archaeologists uncover reveal ancient minds at work as much as ancient hands and for decades many have sought a better way of understanding those minds This understanding is at the forefront of cognitive archaeology a discipline that believes that a greater application of psychological theory to archaeology will further our understanding of the evolution of the human mind Bringing together a diverse range of experts including archaeologists psychologists anthropologists biologists psychiatrists neuroscientists historians and philosophers in one comprehensive volume this accessible and illuminating book is an important resource for students and researchers exploring how the application of cognitive archaeology can significantly and meaningfully deepen their knowledge of early and ancient humans This seminal volume opens the field of cognitive archaeology to scholars across the behavioral sciences *The Branches of Ecology* Frank N. Morgan, 2010-11-15 This book discusses how facts travel and when and why they sometimes travel well enough to acquire a life of their own Whether or not facts travel in this manner depends not only on their character and ability to play useful roles elsewhere but also on the labels packaging vehicles and company that take them across difficult terrains and over disciplinary boundaries These diverse stories of travelling facts ranging from architecture to nanotechnology and from romance fiction to climate science change the way we see the nature of facts Facts are far from the bland and rather boring but useful objects that scientists and humanists produce and fit together to make narratives arguments and evidence Rather their extraordinary abilities to travel well shows when how and why facts can be used to build further knowledge beyond and away from their sites of original production and intended use *War, Peace, and Human Nature* Douglas P.
