*Patterns of Injury and Illness in Great Apes* Nancy C. Lovell, 1990      **Life and Death in the Gombe Chimpanzees** Claire A. Kirchhoff, 2019-06-29 This book addresses how skeletons can inform us about behavior by describing skeletal lesions in the Gombe chimpanzees relating them to known life histories whenever possible and analyzing demographic patterns in the sample This is of particular interest to both primatologists and skeletal analysts who have benefited from published data on a smaller earlier skeletal sample from Gombe The Gombe skeletal collection is the largest collection of wild chimpanzees with known life histories in existence and this work significantly expands the skeletal sample from this long term research site 49 chimpanzees The book explores topics of general interest to skeletal analysts such as demographic patterns which injuries leave signs on the skeleton and rates of healing and discusses both qualitative and quantitative analysis of the patterning of lesions The book presents the data in a narrative style similar to that employed in Dr Goodall's seminal work *The Chimpanzees of Gombe* Readers already familiar with the Gombe chimpanzees are likely to appreciate summaries of life events correlated to observable skeletal features The book is especially relevant at this time to remind primate conservationists of the importance of the isolated chimpanzee population at Gombe National Park as well as the availability of the skeletons for study both within the park itself as well as at the University of Minnesota      **Sexual**

**Coercion in Primates and Humans** Martin N. Muller, Richard W. Wrangham, 2009-10-19 This book presents extensive field research and analysis to evaluate sexual coercion in a range of species including all of the great apes and humans and to clarify its role in shaping social relationships among males among females and between the sexes      PATTERNS OF INJURY/ILLNESS Nancy C. **Conservation in the 21st Century: Gorillas as a Case Study** T.S. Stoinski, H. D. Steklis, P.T. Mehlman, 2009-07-09 Like

other fields of science wildlife conservation is a changing field Threats facing wild populations of apes and other species say 20 years ago are likely not the same ones most pressing today and even where threats have remained unchanged more effective means of addressing them may be available now Conservation scientists have learned from many years of experience and both theoretical and technological advances today provide conservation tools not available in the past This volume identifies the primary problems faced in conserving wild populations of gorillas throughout Africa pinpointing new approaches to solving these problems and outlining the increased role that zoos can play in gorilla conservation It includes expertise of field scientists in a variety of disciplines to discuss current conservation threats novel approaches to conservation and potential solutions [The Global History of Paleopathology](#) Jane E. Buikstra,Charlotte Roberts,2012-06-07 The first comprehensive global history of the discipline of paleopathology **Gorilla Pathology and Health** John E Cooper,Gordon Hull,2016-12-21 Gorilla Pathology and Health With a Catalogue of Preserved Materials consists of two cross referenced parts The first the book itself is a review of pathological changes and tissue responses in gorillas Gorilla gorilla and G beringei with an emphasis on free living animals but also with reference to those in captivity The comparative aspects are discussed stressing the relevance of research to both gorillas and humans What makes the publication truly unique however is the second part a comprehensive descriptive catalogue of the location and nature of gorilla material in museums and scientific institutions throughout the world This is of great consequence because free living gorillas are strictly conserved with restricted access so the location of a wealth of preserved tissues and other material that has been collected over the decades is a great benefit for research and study This book can and should be used to gain cardinal knowledge regarding the biology and pathology of this genus The combination of book and catalogue in this extensive compilation makes it an invaluable tool for all those concerned with the health welfare and conservation of gorillas one of our nearest living relatives Brings together studies data and clinical practice from difficult to access or obscure journals and NGO reports in different languages for all interested parties and practitioners Provides perspectives on existing research in gorilla pathology both for those studying conservation practices and those seeking an understanding of comparable diseases in humans Includes illustrative figures on gross and microscopic pathological changes museum specimens photos of field necropsy and techniques and examples of laboratory tests Features an extensive list of references and further reading in different languages Incorporates a comprehensive descriptive catalogue of gorilla material from around the world *Aging in Nonhuman Primates* Joseph Erwin,Patrick R. Hof,2002 As the number of elderly people in human populations increases the study of normal aging age related disorders and enhanced longevity is taking on new urgency Fundamental research will provide means of preventing and effectively treating the most debilitating and distressing aspects of advanced age Considerations of aging in nonhuman life forms do not aim at life extension but at an increasing appreciation for the biological role of the aging process in populations in addition to developing a more comprehensive understanding of the

mechanisms of aging The present volume focuses on primate aging because human characteristics that evolved during their evolution are homologous with those of other primates Therefore the research on nonhuman primates will decidedly also contribute to our understanding of the process of human aging The topics of this volume include brain aging and neurodegenerative diseases social behavior cognition and aging skeletal aging in natural and captive conditions and consequences of caloric restriction for life and health extension The great variety of contributions aim at providing a survey of the relevant work in progress and increasing the understanding of normal and pathological aging and life span enhancement in a variety of nonhuman primate species

Rothschild, Dawid Surmik, Filippo Bertozzo, 2023-09-27 The study of paleopathology has two very different constituencies the medical scientist and the zoologist paleontologist anthropologist Their investigative procedures and professional jargon are different sometimes to the point of mutual incomprehensibility Paleontologists anthropologists zoologists have a limited data base for the characterization and interpretation of pathology This must come from the human and veterinary medical experience What beyond intellectual satisfaction can the health care community expect from this relationship The past history of the appearance and dispersal of infectious disease and cancer is of considerable theoretical importance and leads to new insights on the nature and transmission of diseases that are otherwise ambiguous The discovery of rheumatoid arthritis in pre Columbian North America exemplifies insights gained The current effort delineates osseous impact of disease as manifest in clinical populations diagnosed in life representation in the zoologic paleontologic and anthropologic record and assessment techniques that can be confidently applied The chapters form columns that provide the foundation for scientific critical thinking The actual integration of the information is in its application Our purpose is to provide a data base and atlas of actually documented skeletal impact of diseases as population phenomenon an initial data base of reported skeletal pathology and a methodology for expanding this to new arenas The first section of the book examines the scientific basis of paleopathology its transition from speculation based musings resolution of misconceptions and the denouement of paleo epidemiology The second section provides holistic analysis of the gamut of pathology diseases with significant skeletal impact with a validated archeologic zoological paleontological record The third section provides a glossary to resolve the semantic challenges inherent to interdisciplinary efforts The fourth section provides an atlas of pathology representation in the fossil record Ultimately this book intends to present a scientifically validated approach to recognition of disease in the archeological zoological and paleontological record superseding previous speculation based offerings **Injury and**

remains and especially its sub discipline palaeopathology To date however palaeopathology has not been necessarily recognised as particularly useful to the field and most key texts in evolutionary medicine have tended to overlook it This novel text is the first to highlight the benefits of using palaeopathological research to answer questions about the evolution of disease and its application to current health problems as well as the benefits of using evolutionary thinking in medicine to help interpret historical disease processes It presents hypothesis driven research by experts in biological anthropology including palaeopathology medicine health sciences and evolutionary medicine through a series of unique case studies that address specific research questions Each chapter has been co authored by two or more researchers with different disciplinary perspectives in order to provide original insightful and interdisciplinary contributions that will provide new insights for both palaeopathology and evolutionary medicine Palaeopathology and Evolutionary Medicine is intended for graduate level students and professional researchers in a wide range of fields including the humanities history social sciences anthropology archaeology palaeopathology geography and life sciences medicine and biology Relevant courses include evolutionary medicine evolutionary anthropology medical anthropology and palaeopathology

**Theory and Practice in the Bioarchaeology of Care** Lorna Tilley, 2015-08-28 This book provides the first comprehensive introduction to and explanation of the theory and practice of the bioarchaeology of care an original fully theorised and contextualised case study based approach designed to identify and interpret cases of care provision in prehistory The applied methodology comprises four stages of analysis each building on the content of the preceding one s which provide the framework for this process Theory and Practice in the Bioarchaeology of Care is the primary source of information on this new approach and serves as a manual for its implementation It elaborates the foundations on which the bioarchaeology of care is constructed it leads the reader through the methodology and it provides three detailed examples of prehistoric caregiving which illustrate how bioarchaeology of care analysis has the capacity to reveal aspects of past group and individual identity and lifeways which might otherwise have remained unknown

of their own work This resource is essential for those involved in a range of endeavours including investigating wildlife crime identifying animal remains ascertaining the circumstances of death of wild species and other legal proceedings and activities concerning wildlife The forensic skills described in this book can be applied to a wide range of activities not necessarily involving the legal process including environmental impact assessments insurance claims governmental and other enquiries checking of trading standards and the inspection of for instance pet shops animal boarding establishments and zoological collections The authors point out that one of the most important requirements of those persons involved in wildlife forensic work is to retain an open mind Such personnel should also be conscious of new developments and evolving techniques and be able to anticipate situations where their investigative and scientific skills might be used to advantage so called horizon scanning Examples of these are given

Reconstructing Behavior in the Primate Fossil Record J. Michael Plavcan, Richard F. Kay, William L. Jungers, Carel P. van Schaik, 2012-12-06 This volume brings together a series of papers that address the topic of reconstructing behavior in the primate fossil record The literature devoted to reconstructing behavior in extinct species is overwhelming and very diverse Sometimes it seems as though behavioral reconstruction is done as an afterthought in the discussion section of papers relegated to the status of informed speculation But recent years have seen an explosion in studies of adaptation functional anatomy comparative sociobiology and development Powerful new comparative methods are now available on the internet At the same time we face a rapidly growing fossil record that offers more and more information on the morphology and paleoenvironments of extinct species Consequently inferences of behavior in extinct species have become better grounded in comparative studies of living species and are becoming increasingly rigorous We offer here a series of papers that review broad issues related to reconstructing various aspects of behavior from very different types of evidence We hope that in so doing the reader will gain a perspective on the various types of evidence that can be brought to bear on reconstructing behavior the strengths and weaknesses of different approaches and perhaps new approaches to the topic We define behavior as broadly as we can including life history traits locomotion diet and social behavior giving the authors considerable freedom in choosing what exactly they wish to explore
