Temperament Jan Strelau, 2005-12-21 Temperament is the first monograph in 40 years to present theories and basic findings in the field of temperament from a broad international and interdisciplinary perspective The text based on the author's four decades of personal study and data collection thoroughly explores the physiological biochemical and genetic bases of temperament incorporating age specific methods of assessment developed through child and adult oriented approaches The 147 illustrations comprise tables of the most popular temperament inventories for both children and adults and unique data tables illustrating the psychometric features of temperament inventories based on self rating and rating by others On the Psychobiology of Personality Robert M Stelmack, 2004-11-12 Zuckerman received his Ph D in psychology from New York University Graduate School of Arts and Science in 1954 with a specialization in clinical psychology After graduation he worked for three years as a clinical psychologist in state hospitals in Norwich Connecticut and Indianapolis Indiana While in the latter position the Institute for Psychiatric Research was opened in the same medical center where he was working as a clinical psychologist He obtained a position there with a joint appointment in the department of psychiatry This was his first interdisciplinary experience with other researchers in psychiatry biochemistry psychopharmacology and

psychology His first research areas were personality assessment and the relation between parental attitudes and psychopathology During this time he developed the first real trait state test for affects starting with the Affect Adjective Check List for anxiety and then broadening it to a three factor trait state test including anxiety depression and hostility Multiple Affect Adjective Check List Later positive affect scales were added Toward the end of his years at the institute the first reports of the effects of sensory deprivation appeared and he began his own experiments in this field These experiments supported by grants from NIMH occupied him for the next 10 years during his time at Brooklyn College Adelphi University and the research labs at Albert Einstein Medical Center in Philadelphia This last job was his second interdisciplinary experience working in close collaboration with Harold Persky who added measures of hormonal changes to the sensory deprivation experiments He collaborated with Persky in studies of hormonal changes during experimentally hypnotically induced emotions During his time at Einstein he established relationships with other principal investigators in the area of sensory deprivation and they collaborated on the book Sensory Deprivation 15 years of research edited by John Zubek 1969 His chapter on theoretical constructs contained the idea of using individual differences in optimal levels of stimulation and arousal as an explanation for some of the variations in response to sensory deprivation The first sensation seeking scale SSS had been developed in the early 1960 s based on these constructs At the time of his move to the University of Delaware in 1969 he turned his full attention to the SSS as the operational measure of the optimal level constructs This was the time of the drug and sexual revolutions on and off campuses and research relating experience in these areas to the basic trait paid off and is continuing to this day in many laboratories Two books have been written on this topic Sensation Seeking Beyond the Optimal Level of Arousal 1979 Behavioral Expressions and Biosocial Bases of Sensation Seeking 1994 Research on sensation seeking in America and countries around the world continues at an unabated level of journal articles several hundred appearing since the 1994 book on the subject

Synaesthesia and Individual Differences Aleksandra Maria Rogowska, 2015-03-19 Synaesthesia is a fascinating cognitive phenomenon where one type of stimulation evokes the sensation of another For example synaesthetes might perceive colours when listening to music or tastes in the mouth when reading words This book provides an insight into the idiosyncratic nature of synaesthesia by exploring its relationships with other dimensions of individual differences Many characteristics of linguistic colour synaesthetes are covered including personality temperament intelligence creativity emotionality attention memory imagination colour perception body lateralization and gender Aleksandra Maria Rogowska proposes that linguistic colour synaesthesia can be considered as an abstract form of a continuous variable in the broader context of cross and intra modal associations There has been a resurgence of interest in synaesthesia and this book will appeal to students and scientists of psychology cognitive science and social science and to those who are fascinated by unusual states of mind

Cross-Cultural Psychology John W. Berry, 2002-09-05 This second edition of the best selling textbook Cross Cultural Psychology has been substantially revised to
