Performance Analysis Of Real Time Embedded Software:

Performance Analysis of Real-Time Embedded Software Yau-Tsun Steven Li,Sharad Malik,2012-12-06 Embedded systems are characterized by the presence of processors running application specific software Recent years have seen a large growth of such systems and this trend is projected to continue with the growth of systems on a chip Many of these systems have strict performance and cost requirements To design these systems sophisticated timing analysis tools are needed to accurately determine the extreme case best case and worst case performance of the software components Existing techniques for this analysis have one or more of the following limitations they cannot model complicated programs they cannot model advanced micro architectural features of the processor such as cache memories and pipelines they cannot be easily retargeted for new hardware platforms In Performance Analysis of Real Time Embedded Software a new timing analysis technique is presented to overcome the above limitations The technique determines the bounds on the extreme case best case and worst case execution time of a program when running on a given hardware system It partitions the problem into two sub problems program path analysis and microarchitecture modeling Performance Analysis of Real Time Embedded Software will be of interest to Design Automation professionals as well as designers of circuits and systems   Performance Analysis of Real-time Embedded Software Yau-Tsun Steven Li,1997   *Advances in Real-Time Systems* Samarjit Chakraborty,Jörg Eberspächer,2012-02-09 This volume contains the lectures given in honor to Georg F rber as tribute to his contributions in the area of real time and embedded systems The chapters of many leading scientists cover a wide range of aspects like robot or automotive vision systems or medical aspects   **The Compiler Design Handbook** Y.N.
