Radiation Risks Risk Perception And Social Constructions

Louis A. Cox, Paolo F. Ricci

Radiation Risks Risk Perception And Social Constructions:

Cross-Cultural Risk Perception Ortwin Renn, Bernd Rohrmann, 2000-01-31 Cross Cultural Risk Perception demonstrates the richness and wealth of theoretical insights and practical information that risk perception studies can offer to policy makers risk experts and interested parties The book begins with an extended introduction summarizing the state of the art in risk perception research and core issues of cross cultural comparisons The main body of the book consists of four cross cultural studies on public attitudes towards risk in different countries including the United States Australia New Zealand France Germany Sweden Bulgaria Romania Japan and China The last chapter critically discusses the main findings from these studies and proposes a framework for understanding and investigating cross cultural risk perception Finally implications for communication regulation and management are outlined The two editors sociologist Ortwin Renn Center of Technology Assessment Germany and psychologist Bernd Rohrmann University of Melbourne Australia have been engaged in risk research for the last three decades They both have written extensively on this subject and provided new empirical and theoretical insights into the growing body of international risk perception research *The Social and Cultural Construction of Risk* B.B. Johnson, V.T. Covello, 2012-12-06 The Social and Cultural Construction of Risk Issues Methods and Case Studies Vincent T Covello and Branden B Johnson Risks to health safety and the environment abound in the world and people cope as best they can But before action can be taken to control reduce or eliminate these risks decisions must be made about which risks are important and which risks can safely be ignored The challenge for decision makers is that consensus on these matters is often lacking Risks believed by some individuals and groups to be tolerable or acceptable such as the risks of nuclear power or industrial pollutants are intolerable and unacceptable to others This book addresses this issue by exploring how particular technological risks come to be selected for societal attention and action Each section of the volume examines from a different perspective how individuals groups communities and societies decide what is risky how risky it is and what should be done The writing of this book was inspired by another book Risk and Culture An Essay on the Selection of Technological and Environmental Dangers Published in 1982 and written by two distinguished scholars Mary Douglas a British social anthropologist and Aaron Wildavsky an American political scientist the book received wide critical attention and offered several provocative ideas on the nature of risk selection perception and acceptance **Radiation Safety** Haydee Domenech, 2016-08-27 This book discusses important fundamentals of radiation safety with specific details on dose units calculations measuring and biological effects of ionizing radiation The author covers different exposure situations and their requirements and relevant legislation and regulations governing radiation safety The book also examines radioactive waste management the transport of radioactive materials emergency planning and preparedness and various examples of radiation protection programs for industrial medical and academic applications Risks in Technological Systems Göran Grimvall, Åke Holmgren, Per Jacobsson, Torbjörn Thedéen, 2009-11-03 Risks in Technological Systems is an interdisciplinary

university textbook and a book for the educated reader on the risks of today's society. In order to understand and analyze risks associated with the engineering systems on which modern society relies, other concerns have to be addressed besides technical aspects. In contrast to many academic textbooks dealing with technological risks, this book has a unique interdisciplinary character that presents technological risks in their own context. Twenty-four scientists have come together to present their views on risks in technological systems. Their scientific disciplines cover not only engineering, economics, and medicine but also history, psychology, literature, and philosophy. Taken together, these contributions provide a broad but accurate interdisciplinary introduction to a field of increasing global interest as well as rich opportunities to achieve in-depth knowledge of the subject.

What is Safe? David R Williams, 2007-10-31. Is it safe? What are the risks involved? are questions frequently asked by members of the public. This unique book explains the fundamental problems faced in modern day life. Terms such as risk and safe are clearly defined and the risks encountered between birth and death are discussed including transport, the home, healthcare, diet, and the workplace. The perception of risk and the risks from radiation, natural radwaste, and nuclear reactors are covered along with management of risk and the psychology of risk perception. *What is Safe: The Risks of Living in a Nuclear Age* is illustrated with examples from the most deeply researched areas. Written for the lay person, the volume also includes a complete reprint of the late Lord Walter Marshall's famous lecture *The Radioactive Garden*. It will be of interest to students, teachers, researchers, industrialists, or indeed anyone wishing for an up-to-date view of risk and safety.

Risk Management Gerald Mars, David T. H. Weir, 2020-06-18. First published in 2000, *Risk Management* is a two-volume set comprised of the most significant and influential articles by the leading authorities in the studies of risk management. The volumes include a full-length introduction from the editor, an internationally recognized expert, and provides an authoritative guide to the selection of essays chosen and to the wider field itself. The collections of essays are both international and interdisciplinary in scope and provide an entry point for investigating the myriad of study within the discipline.

The SAGE Handbook of Risk Communication Hyunyi Cho, Torsten Reimer, Katherine A. McComas, 2014-10-29. In this comprehensive state-of-the-art overview of risk communication, the field's leading experts summarize theory, current research, and practice in a range of disciplines and describe effective communication approaches for risk situations in diverse contexts such as health, environment, science, technology, and crisis. Offering practical insights, the contributors consider risk communication in all contexts and applications: interpersonal, organizational, and societal, offering a wider view of risk communication than other volumes. Importantly, the handbook emphasizes the communication side of risk communication, providing integrative knowledge about the models, audiences, messages, and the media and channels necessary for effective risk communication that enables informed judgments and actions regarding risk. Editors Hyunyi Cho, Torsten Reimer, and Katherine McComas have significantly contributed to the field of risk communication with this important reference work, a must-have for students, scholars, and risk and crisis communication professionals.
