Radiowave Propagation In Satellite Communications:

Radiowave Propagation in Satellite Communications Louis J. Ippolito, 2012-12-06 Radiowave Propagation in Communications was written with two basic objectives 1 to present an up to date review of the major radiowave propagation phenomena which hinder reliable space communications and 2 to describe how these propagation phenomena affect the design and performance of satellite communications systems Earth orbiting satellites are employed extensively for the relay of information in a vast array of telecommunications meteorological government and scientific applications Satellite systems rely on the transmission of radiowaves to and from the satellite and are dependent on the propagation characteristics of the transmission path primarily the earth's atmosphere Radiowave propagation thus plays a very important part in the design and ultimate performance of space communications systems This book presents for the first time the meshing in a single publication of the fundamentals of radiowave propagation factors with a discussion of the practical consequences of these factors on satellite communications systems Two major subfields are involved in this book Radiowave propagation which is basically applied electromagnetic theory provides the theory and analytical tools for the first several chapters Later chapters then apply propagation effects to the field of electrical engineering involved with satellite communications The material progresses from the essential aspects of radiowave propagation to the application of practical methods and techniques in the design and performance of satellite communications systems

Satellite Communications Takashi Iida, 2000 **Radio Wave Propagation and Channel Modeling for Earth-Space Systems** Athanasios G. Kanatas, Athanasios D. Panagopoulos, 2017-12-19 The accurate design of earth space systems requires a comprehensive understanding of the various propagation media and phenomena that differ depending on frequencies and types of applications The choice of the relevant channel models is crucial in the design process and constitutes a key step in performance evaluation and testing of earth space systems The subject of this book is built around the two characteristic cases of satellite systems fixed satellites and mobile satellite systems Radio Wave Propagation and Channel Modeling for Earth Space Systems discusses the state of the art in channel modeling and characterization of next generation fixed multiple antennas and mobile satellite systems as well as propagation phenomena and fade mitigation techniques The frequencies of interest range from 100 MHz to 100 GHz from VHF to W band whereas the use of optical free space communications is envisaged Examining recent research advances in space time tropospheric propagation fields and optical satellite communication channel models the book covers land mobile multiple antennas satellite issues and relative propagation campaigns and stratospheric channel models for various applications and frequencies It also presents research and well accepted satellite community results for land mobile satellite and tropospheric attenuation time series single link and field synthesizers The book examines aeronautical communications channel characteristics and modeling relative radio wave propagation campaigns and stratospheric channel model for various applications and frequencies Propagation effects on satellite navigation systems and the corresponding models are
