Rationality And Nature A Sociological Inquiry Into A Changing Relationship:

Rationality And Nature Raymond Murphy, 1994-08-25 Divergent beliefs about humanity's relationship to nature collide as the second millennium ends. One belief emphasizes that a distinctive characteristic of humans is reason enables them to reshape and master nature. Another insists that nature is not so plastic hence humans must adapt to nature and render development sustainable or even limit growth. Social ecology asserts that environmental problems result from institutional hierarchies and suggests decentralized institutions and egalitarian ethics. According to deep ecology such problems originate in cultures assuming only humans are worthwhile thus it stresses the intrinsic value of nature. Feminists are torn between values based on the equality of men and women and ecofeminist values postulating that women are inherently closer to nature than men. **Rationality and Nature** critically assesses these conflicting cultural tendencies. Waste has been the forgotten element of political economy. Western society has sophisticated methods of financial accounting but does little to account for the losses financial and human of waste. Raymond Murphy proposes in this book a theory of environmental debt as a source of capital accumulation. He develops a model of environmental classes that helps us to understand the political and economic basis of conflict over the environment. Environmental degradation did not occur on a vast scale until science and applied science were developed. Are they responsible for it and can they be reoriented toward a more symbiotic relationship with nature. Other ways of bringing about a symbiotic relationship are also explored in this book. **compulsion ecological values ecological experience and ecological knowledge**

Microsociological Perspectives for Environmental Sociology Bradley H. Brewster, Antony J. Puddephatt, 2016-11-10 Environmental sociology tends to be dominated by macrosociological theories to the point that microsociological perspectives have been neglected and ignored This collection of original work is the first book dedicated to demonstrating the utility of microsociological perspectives for investigating environmental issues From symbolic interactionism to actor network theory from dramaturgy to conversation analysis from practice theory to animism a variety of microsociological perspectives are not only drawn upon but creatively applied and developed making this collection not only a contribution to environmental sociology but to microsociological theory as well The authors address such topics as the treatment of waste human animal relations science and industry partnerships environmental social movements identities and lifestyles eco tourism the framing of land water and natural resources and even human conceptions of outer space Bringing together diverse scholars perspectives and topics Microsociological Perspectives for Environmental Sociology opens the field up to new approaches and initiates much needed dialogue between environmental sociologists and microsociologists It will appeal not only to sociologists but to environmental scholars across the social sciences interested in enriching their theoretical repertoire in studying the social aspects of the environment

Green Development Bill Adams, 2019-12-05 The concept of sustainability lies at the core of the challenge of environment and development and the way governments business and environmental groups respond to it Green Development provides a clear and coherent analysis of sustainable development in both theory and practice Green Development explores the origins and evolution of mainstream thinking about sustainable development and offers a critique of the ideas behind them It draws a link between theory and practice by discussing the nature of the environmental degradation and the impacts of development It argues that ultimately green development has to be about political economy about the distribution of power and not about environmental quality Its focus is strongly on the developing world The fourth edition retains the broad structure of previous editions but has been updated to reflect advances in ideas and changes in international policy Greater attention has been given to the political ecology of development market based and neoliberal environmentalism and degrowth This fully revised edition

discusses the origins of thinking about sustainability and sustainable development and its evolution to the present day the ideas that dominate mainstream sustainable development including natural capital the green economy market environmentalism and ecological modernisation critiques of mainstream ideas and of neoliberal framings of sustainability and alternative ideas about sustainability that challenge business as usual thinking such as arguments about limits to growth and calls for degrowth the dilemmas of sustainability in the context of forests desertification food and farming biodiversity conservation and dam construction the challenge of policy choices about sustainability particularly between reformist and radical responses to the contemporary global dilemmas Green Development offers clear insights into the challenges of environmental sustainability and social and economic development It is unique in offering a synthesis of theoretical ideas on sustainability and in its coverage of the extensive literature on environment and development around the world The book has proved its value to generations of students as an authoritative thought provoking and readable guide to the field of sustainable development

Risk in the Modern Age NA NA, 2019-06-12 Environmental decision making in recent decades has become increasingly dependent on scientific expertise Grounded in universal principles of knowledge these expert evaluations often depart from the assessments of ordinary members of the public Whether the issue is nuclear power genetic testing food safety or biodiversity conservation lay people are increasingly charging experts with being ignorant of local contextual considerations Scientists as well as many policy makers in turn contend that the public is hopelessly irrational in gauging environmental risks A growing group of social theorists has begun to take a keen interest in these disputes because risk captures central themes of late modernity Increasing individualization emerging new social movements and declining public trust in key institutions are notions that loom large in these debates Highlighting both theoretical and empirical perspectives this volume brings together a distinguished group of environmental sociologists who critique and extend current thinking on what it means to live in a risk society

Thai Agriculture Lindsay Falvey, 2000 The history science and social aspects of today's Thai agriculture is traced from hunters and gatherers through agro cities through State religious Empires and immigrating Tai to produce a sustainable agriculture The wet glutinous rice culture determined administrative structures in a pragmatic society which regularly produced a saleable surplus Continuing today these systems consolidated the importance of rice agriculture to national security and economic well being as Chinese and European influence benefited agribusiness and initiated the demand which would expand agriculture through population increase until accessible land was expended As agriculture

declined in relative financial importance it continued to provide the benefits of employment crisis resilience self sufficiency rural social support and cultural custody Agricultural institutions evolved from a taxation and dispute resolution base to provide research education and technology transfer at levels below potential as they supported commercial agriculture funded by credit Agribusiness expanded from the 1960s and small holders were partly viewed as a past relic which agribusiness could modernise Unique elements of Thai agriculture include irrigation technologies administrative structures based on water control global leadership in many agricultural commodities multinational agribusiness negotiating approaches potential for further increases from known technologies and an open culture which has embraced new ideas One of the world s few major agricultural exporters Thailand leads the world in rice rubber canned pineapple and black tiger prawn production and export the region in chicken meat export and several other commodities and feeds more the four times its own population from less intensive agriculture than its neighbours Poised to benefit from expansion in livestock demand poverty reduction and improved education research and legal and social systems evident in the recent Asian financial crisis will be considered with popular concern for socially sensitive alternatives for small holder farmers to co exist with commercial agriculture Thailand will likely remain one of the world s major agricultural countries in social environmental and economic terms for the foreseeable future as it addresses the continuing rural issues of poverty and inequity

Post-Ecologist Politics Ingolfur Blühdorn,2012-10-12 Since the late 1980s ecological thought and the European eco movement have gone through a phase of fundamental transformation which has been widely acknowledged but not yet theorised in any satisfactory way This important text questions why radical ecological criticism has had so little impact on contemporary society despite the urgency of the issues it highlights The book offers a challenging theoretical critique of ecological thought itself *From the Cult of Waste to the Trash Heap of History* Zsuzsa Gille,2007-04-04 Zsuzsa Gille combines social history cultural analysis and environmental sociology to advance a long overdue social theory of waste in this study of waste management Hungarian state socialism and post Cold War capitalism From 1948 to the end of the Soviet period Hungary developed a cult of waste that valued reuse and recycling With privatization the old environmentally beneficial though not flawless waste regime was eliminated and dumping and waste incineration were again promoted Gille s analysis focuses on the struggle between a Budapest based chemical company and the small rural village that became its toxic dump site *Animal Spaces, Beastly Places* Chris Philo,Chris Wilbert,2004-08-02 *Animal Spaces Beastly Places* examines how animals interact and relate with people in different ways Using a comprehensive range of examples which include feral cats and wild wolves to domestic animals and intensively farmed cattle the contributors explore the complex relations in which humans and non human animals are mixed together Our emotions involving animals range from those of love and compassion to untold cruelty force violence and power As humans we have placed different animals into different categories according to some notion of species usefulness domesticity or wildness As a result of these varying and often

contested orderings animals are assigned to particular places and spaces *Animal Spaces Beastly Places* shows us that there are many exceptions and variations on the spatiality of human animal spatial orderings within and across cultures and over time It develops new ways of thinking about human animal interactions and encourages us to find better ways for humans and animals to live together

Space and Transport in the World-System Stephen G. Bunker, Paul S. Ethics and Urban Design Gideon S. Golany,1995-08-01 The city according to urban design scholar Gideon Golany is the largest and most complicated project ever produced by humankind In Ethics and Urban Design he challenges design professionals to reexamine their basic assumptions about the urban environment and offers design strategies based on enduring human values In search of answers to the paradoxical problems of the modern city Golany takes the reader through the sweep of human settlements from the dawn of civilization to the present His authoritative

examination of the genesis of the city is illuminated by instructive examples of early urban centers. Mesopotamia, the Indus River Valley, the Egyptian cities of the Nile, and the capital cities of ancient China all are examined in the light of what made them work as major centers of human activity. What Golany finds in the success stories of the past are cohesive sociocultural values that shaped the design of homes, neighborhoods, and cities. These ethical values helped to maintain an equilibrium within the society that permeated its natural, social, and human-made environments. In the present era, conversely, he finds a major disconnection between human values and the ethics of technology, which has resulted in confusion, imbalance, and dehumanization. To help designers gain a perspective on possible solutions, Golany explains leading comprehensive design strategies, including the valley theory, the urban border zone concept, and the regional concept of Patrick Geddes. In the case study of contemporary Holland, he details what a small, densely populated country has been able to achieve through design planning rooted in environmental ethics. *Future Frontiers for Urban Design*, the culminating section of this groundbreaking book, opens with Golany's vision of the future city. He examines the issues of thermal performance and climate as they relate to urban design and offers the concept of geospace, the earth-enveloped habitat. Buttressing his presentation with detailed information on the mechanics of geospace, Golany describes case studies of the successful use of earth-enveloped habitats in China and Tunisia. He makes a powerful argument for the geospace city as a renewal of ancient traditions that can restore the vital equilibrium between nature and human settlements that we seem to have lost. *Ethics and Urban Design* is a distinguished scholar's analysis and prescription for the city; it offers an abundance of stimulating ideas for the architects, designers, and planners who have assumed responsibility for its future. *Ethics and Urban Design* draws on historical examples and contemporary case studies from around the world to illustrate urban design strategies that can help restore equilibrium to the natural, social, and built environments of the city. In this stimulating book, urban design scholar Gideon Golany offers architects, designers, and planners both an in-depth analysis of the fundamental issues of urban design and practical options for the design of the future city. Examines the genesis and development of the city from the earliest pre-settlements to the rise of urban society. Presents urban design strategies based on historical examples of early urban centers, including Mesopotamia, the Indus River Valley, Egypt, and China. Offers case studies of environmental success stories from Europe, Asia, and Africa. Details geospace design options, the use of underground space for diversified land use, housing, and transportation. Fully illustrated with over 80 photographs, drawings, and diagrams.
