Complex Engineering Problem

A part of grim economic outlook of Pakistan comes from huge trade deficit i.e. spending high on imports as compared to the earnings from exports. Our annual exports during July – March, 2020 - 2021 totalled \$ 18,688 million while import of different commodities worth \$ 39,519 million was recorded from July – March, 2020 – 2021. These imports include several chemicals which can be produced locally to lessen the burden on our national exchequer. Young and talented chemical engineers should come up with design solutions to start their own business of producing chemicals.

A complete list of imported commodities is available at the website of Pakistan Bureau of Statistics (Link below). Choose one of the chemicals, consider different routes of its production and select one route while keeping in mind the 'twelve principles of green chemistry'. Choose a reasonable production capacity, find kinetics of the reactions from literature and design all the reactors involved. Look at the conversions in each reactor, find out if the conversions are limited by Thermodynamics or Kinetics. Think about different ways to enhance the conversion and productivity. Prepare a report and submit for evaluation.

Reaction Kinetics and the Development and Operation of Catalytic Processes G.F. Froment, K.C. Waugh, 2001-04-03 Reaction Kinetics and the Development and Operation of Catalytic Processes is a trendsetter The Keynote Lectures have been authored by top scientists and cover a broad range of topics like fundamental aspects of surface chemistry in particular dynamics and spillover the modeling of reaction mechanisms with special focus on the importance of transient experimentation and the application of kinetics in reactor design Fundamental and applied kinetic studies are well represented More than half of these deal with transient kinetics a new trend made possible by recent sophisticated experimental equipment and the awareness that transient experimentation provides more information and insight into the microphenomena occurring on the catalyst surface than steady state techniques The trend is not limited to purely kinetic studies since the great majority of the papers dealing with reactors also focus on transients and even deliberate transient operation It is to be expected that this trend will continue and amplify as the community becomes more aware of the predictive potential of fundamental kinetics when combined with detailed realistic modeling of the reactor operation

Kinetics of Multistep Reactions Friedrich G. Helfferich, 2004-09-15 This book addresses primarily the engineer in industrial process development the research chemist in academia and industry and the graduate student intending to become a reaction engineer In industry competitive pressures put a premium on scale up by large factors to cut development time To be safe such development should be based on fundamental kinetics that reflect the elementary steps of which the reaction consists The book forges fundamental kinetics into a practical tool by presenting new effective methods for elucidation of mechanisms and reduction of complexity without unacceptable sacrifice in accuracy fewer equations lesser computational load fewer coefficients fewer experiment to determine them For network elucidation new rules relating network configurations to observable kinetic behaviour allow incorrect networks to be ruled out by whole classes instead of one by one For modelling general equations and algorithms are given from which equations for specific networks can be recovered by simple substitutions The procedures are illustrated with examples of industrial reactions including among others paraffin oxidation ethoxylation hydroformylation hydrocyanation shape selective catalysis ethane pyrolysis styrene polymerization and ethene oligomerization Many of the rate equations have not been published before The expanded edition of the 2001 title Kinetics of Homogeneous Multistep Reactions includes new chapters on heterogeneous catalysis and periodic and chaotic reactions new sections on adsorption statistical methods and lumping and other new detail Contains new chapters on heterogeneous catalysis oscillations and chaos Includes new sections on statistical methods lumping adsorption and software and databases Provides a better understanding of complex reaction mechanisms
