D. Jenkins, John F. Kennedy, 1980 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume Ziegler Catalysts Gerhard Fink, Rolf Mülhaupt, Hans H. Brintzinger, 2012-12-06 Forty years after Ziegler's discovery of the Aufbaureaktion and low pressure ethene polymerization transition metal catalyzed olefin and diolefin polymerization continues to represent one of the most active and exciting areas Since the 1980s outstanding scientific innovations and process improvements have revolutionized polyolefin technology and greatly simplified polymerization processes Well defined catalyst systems are now at hand and facilitate the understanding of basic reaction mechanisms and correlations between catalyst structures polymer microstructures and polymer properties This book reviews some of the modern approaches in organometallic chemistry Ziegler Natta catalysis polymerization processes design of novel

materials and the modelling in catalyst and process development Practical Macromolecular Organic Chemistry Dietrich Braun, Harald Cherdron, Werner Kern, 1984 *The Chemistry and Technology of Cellulosic Copolymers* A. Hebeish, T. J. Guthrie, 2012-12-06 Many excellent volumes have been written on the chemistry of cellulose and its derivatives Judging by the number of conferences which have been assembled to deal with the topic cellulose and its derivatives continue to arouse great scientific interest Matching this interest has been the development in copolymer science and technology In both instances the driving force has been the search for products having useful new or interesting properties It appeared inevitable that these two concepts would be brought together at some time in the research and development of cellulosic copolymers That time has arrived In assembling this text our aim was to present an informative account of the chemistry and technology of cellulosic copolymers As such we intended that the contents be of interest to all those concerned with the production and use of cellulosic products whether in academic or industrial circles Sections of the text should be of value in undergraduate and post graduate teaching provided the student is given guidance in following the text The volume is divided into eight chapters each dealing with factors which are relevant to an understanding of cellulosic copolymers Each chapter carries its own bibliography and is reasonably self contained *New Methods for Polymer Synthesis* W.J. Mijs, 2013-06-29 The art and science of macromolecular architecture is based on synthesis analysis processing and evaluation of physical properties of polymers The growing specificity of available synthetic methods and the increasing refinement of analytical and physical analysis are gradually providing a deeper insight into structure property relationships of polymers upon which many applications can be based This book deals with recent methods for polymer synthesis Those that lead to specific structures have been selected especially Background mechanism scope and limitations and illustrative procedures are given for each method With this layout the editor hopes that the book will provide a practical guideline for the synthetic polymer chemist in industry or at a university graduate school on how to apply the methods in the design of new polymer structures The editor is grateful to the authors not only for their contributions containing interesting new developments in polymer synthesis but also for the way they have fitted their text into the general framework of the book The elegant chemistry described in the following chapters will it is hoped inspire more organic chemists to apply their skills to polymer synthesis where the beauty of organic chemistry in terms of structural control and reactivity may be even more apparent than in the low molecular field
