Reliability and Statistics in Geotechnical Engineering Gregory B. Baecher, John T. Christian, 2005-08-19 Risk and reliability analysis is an area of growing importance in geotechnical engineering where many variables have to be considered. Statistics, reliability modeling and engineering judgement are employed together to develop risk and decision analyses for civil engineering systems. The resulting engineering models are used to make probabilistic predictions which are applied to geotechnical problems. Reliability Statistics in Geotechnical Engineering comprehensively covers the subject of risk and reliability in both practical and research terms. Includes extensive use of case studies. Presents topics not covered elsewhere: spatial variability and stochastic properties of geological materials. No comparable texts available. Practicing engineers will find this an essential resource as will graduates in geotechnical engineering programmes.

Family and Population Changes in Singapore Wei-Jun Jean Yeung, Shu Hu, 2018-04-17 This book depicts the evolution of Singapore's family and population landscape in the last half a century, the related public policies and future challenges. Since the country gained independence in 1965, family and population policies have been integral to her nation building strategies. The chapters discuss the changes in population compositions, family structures, relations and values among major ethnic groups. They also discuss policies for vulnerable populations such as female headed households, cross cultural families, same sex partnering, the elderly and low income families.

An Introduction to Statistical Modeling of Extreme Values Stuart Coles, 2013-11-27 Directly oriented towards real practical application, this book develops both the basic theoretical framework of extreme value models and the statistical inferential techniques for using these models in practice. Intended for statisticians and non-statisticians alike, the theoretical treatment is elementary, with heuristics often replacing detailed mathematical proof. Most aspects of extreme modeling techniques are covered, including historical techniques still widely used and contemporary techniques based on point process models. A wide range of worked examples using genuine datasets illustrate the various modeling procedures, and a concluding chapter provides a brief introduction to a number of more advanced topics including Bayesian inference and spatial extremes. All the computations are carried out using S-PLUS and the corresponding datasets and functions are available via the Internet for readers to recreate examples for themselves. An essential reference for students and researchers in statistics and disciplines such as engineering, finance and environmental science, this book will also appeal to practitioners looking for practical help in solving real problems. Stuart Coles is Reader in Statistics at the University of Bristol, UK, having previously lectured at the universities of Nottingham and Lancaster. In 1992 he was the first recipient of the Royal Statistical Society's research prize. He has published widely in the statistical literature, principally in the area of extreme value modeling.

Designing Experiments and Analyzing Data Scott E. Maxwell, Harold D. Delaney, Ken Kelley, 2017-09-11 *Designing Experiments and Analyzing Data A Model Comparison Perspective* 3rd edition offers an integrative conceptual framework for understanding experimental design and data analysis Maxwell Delaney and Kelley first apply fundamental principles to simple experimental designs followed by an application of the same principles to more complicated designs Their integrative conceptual framework better prepares readers to understand the logic behind a general strategy of data analysis that is

appropriate for a wide variety of designs which allows for the introduction of more complex topics that are generally omitted from other books Numerous pedagogical features further facilitate understanding examples of published research demonstrate the applicability of each chapter s content flowcharts assist in choosing the most appropriate procedure end of chapter lists of important formulas highlight key ideas and assist readers in locating the initial presentation of equations useful programming code and tips are provided throughout the book and in associated resources available online and extensive sets of exercises help develop a deeper understanding of the subject Detailed solutions for some of the exercises and realistic data sets are included on the website DesigningExperiments com The pedagogical approach used throughout the book enables readers to gain an overview of experimental design from conceptualization of the research question to analysis of the data The book and its companion website with web apps tutorials and detailed code are ideal for students and researchers seeking the optimal way to design their studies and analyze the resulting data

Long-Term Care around the World Jonathan Gruber,Kathleen McGarry,2025-05-14 A comparative analysis of both formal and informal long term care in ten of the world s wealthiest countries Nations throughout the world are in the midst of an enormous demographic transition with life expectancy increasing and fertility falling leading to a rapidly aging population and critical implications for long term care around the world This volume documents and compares long term care programs in ten wealthy countries Analyses of survey data and government statistics show that the costs of long term care are beyond the financial means of a large fraction of the elderly population in most countries particularly the oldest and most disabled As a result public systems bear most of the cost of formal long term care such as care in an institution or paid home care Most countries spend more on nursing homes than on home care but this relationship varies widely as does the mix of care needs and resources used to define eligibility for public funding At the same time most care is provided informally through family or unpaid caregivers The costs of informal care including the foregone earnings of caregivers are estimated to account for at least one third of all long term care spending in every country Thus any estimate of the social costs of long term care must

account for the implicit costs of informal care *Sample Size Determination and Power* Thomas P. Ryan, 2013-05-28 A comprehensive approach to sample size determination and power with applications for a variety of fields *Sample Size Determination and Power* features a modern introduction to the applicability of sample size determination and provides a variety of discussions on broad topics including epidemiology microarrays survival analysis and reliability design of experiments regression and confidence intervals The book distinctively merges applications from numerous fields such as statistics biostatistics the health sciences and engineering in order to provide a complete introduction to the general statistical use of sample size determination Advanced topics including multivariate analysis clinical trials and quality improvement are addressed and in addition the book provides considerable guidance on available software for sample size determination Written by a well known author who has extensively class tested the material *Sample Size Determination and Power* Highlights the applicability of sample size determination and provides extensive literature coverage Presents a modern general approach to relevant software to guide sample size determination including CATD computer aided trial design Addresses the use of sample size determination in grant proposals and provides up to date references for grant investigators An appealing reference book for scientific researchers in a variety of fields such as statistics biostatistics the health sciences mathematics ecology and geology who use sampling and estimation methods in their work *Sample Size Determination and Power* is also an ideal supplementary text for upper level undergraduate and graduate level courses in statistical sampling *Low and Lower Fertility* Ronald R. Rindfuss, Minja Kim Choe, 2015-10-12 This volume examines two distinct low fertility scenarios that have emerged in economically advanced countries since the turn of the 20th century one in which fertility is at or near replacement level and the other where fertility is well below replacement It explores the way various institutions histories and cultures influence fertility in a diverse range of countries in Asia Europe North America and Australia The book features invited papers from the Conference on Low Fertility Population Aging and Population Policy held December 2013 and co sponsored by the East West Center and the Korea Institute for Health and Social Affairs KIHASA It first presents an overview of the demographic and policy implications of the two low fertility scenarios Next the book explores five countries currently experiencing low fertility rates China Hong Kong Japan Singapore and South Korea It then examines three countries that have close to replacement level fertility Australia the Netherlands and the United States Each country is featured in a separate chapter written by a demographer with expert knowledge in the area Very low fertility is linked to a number of conditions countries face including a declining population size At the same time low fertility and its effect on the age structure threatens social welfare policies This book goes beyond the technical to examine the core institutional policy and cultural factors behind this increasingly important issue It helps readers to make cross country comparisons and gain insight into how diverse institutions policies and culture shape fertility levels and patterns *Small Country Innovation Systems* Charles Edquist, Leif Hommen, 2009-01-01 What are the challenges that small countries face

concerning innovation and what are the effects of globalization on their innovation systems In this very interesting rich and timely book Edquist and Hommen compare ten different small national innovation systems from the Asia Pacific and Northern Europe that are rather advanced in their development The answers that the authors give are convincing and relate not only to the unique characteristics of each national system that shapes innovative activity but also to some commonalities that exist across these countries Franco Malerba Bocconi University Italy This major book presents case studies of ten small country national systems of innovation NSIs in Europe and Asia namely Denmark Finland Hong Kong Ireland the Netherlands Norway Singapore South Korea Sweden and Taiwan These cases have been carefully selected as examples of success within the context of globalization and as new economies where competition is increasingly based on innovation To facilitate comparative analysis the ten studies follow a common structure informed by an activities based approach to describing and analysing NSIs which addresses the critical issues of globalization and the consequences of innovation for economic performance The final chapter compares fast growth and slow growth countries concentrating on issues of innovation policy The results illustrate the usefulness of an activities based approach to studying NSIs point to distinctive national roles within an increasingly differentiated international division of labour and address the key themes of selectivity and coordination in innovation policy This valuable book presents one of the most significant comprehensive and comparative country studies of NSIs in the last decade It will have great import and should be widely read by every serious student and scholar of innovation studies
