**Manufacturing Process** Rajesh Kumar R,Vivek Gopi,2025-06-23 The fundamental idea of manufacturing or production is to create or produce something that has a useful form There are four basic production processes for producing desired shape of a product These are casting machining joining welding mechanical fasteners etc and forming processes Casting process exploit the fluidity of a metal in liquid state as it takes shape and solidifies in a mould Machining processes provide desired shape with good accuracy and precision but tend to waste material in the generation of removed portions Joining

processes permit complex shapes to be constructed from simpler components and have a wide domain of applications Forming processes exploit a remarkable property of metals which is their ability to flow plastically in the solid state without deterioration of their properties With the application of suitable pressures the material is moved to obtain the desired shape with almost no wastage This book on Manufacturing Process will give you a detailed understanding of manufacturing processes such as casting joining and forming
