Maple V, 1992 *Mathematical Computation with Maple V: Ideas and Applications* Thomas Lee, 1993 This volume contains the proceedings for the Second Annual Maple Summer Workshop and Symposium held at the University of Michigan Ann Arbor on June 28 30 1993 The goal of this conference was to encourage innovative applications of the Maple V mathematical computation system Maple V: Mathematics and its Applications Robert J. Lopez, 2012-12-06 The Maple Summer Workshop and Symposium MSWS 94 reflects the growing community of Maple users around the world This volume contains the contributed papers A careful inspection of author affiliations will reveal that they come from North America Europe and Australia In fact fifteen come from the United States two from Canada one from Australia and nine come from Europe Of European papers two are from Germany two are from the Netherlands two are from Spain and one each is from Switzerland Denmark and the United Kingdom More important than the geographical diversity is the intellectual range of the contributions We begin to see in this collection of works papers in which Maple is used in an increasingly flexible way For example there is an application in computer science that uses Maple as a tool to create a new utility There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field There are applications to geometrical optics digital signal processing and experimental design **First Leaves: A Tutorial Introduction to Maple V** Bruce W. Char, Keith O. Geddes, Gaston H. Gonnet, Benton L. Leong, Michael B. Monagan, Stephen M. Watt, 2012-12-06 This tutorial shows how to use Maple both as a calculator with instant access to hundreds of high level math routines and as a programming language for more demanding tasks It covers topics such as the basic data types and statements in the Maple language It explains the differences between numeric computation and symbolic computation and illustrates how both are used in Maple Extensive how to examples are used throughout the tutorial to show how common types of calculations can be expressed easily in Maple The manual also uses many graphics examples to illustrate the way in which 2D and 3D graphics can aid in understanding the behavior of functions **Introduction to Maple** Andre HECK, 2012-12-06 In symbolic computation on computers also known as computer algebra keyboard and display replace the traditional pencil and paper in doing mathematical computations Interactive computer programs which are called computer algebra systems allow their users to compute not only with numbers but also with symbols formulae equations and so on Many mathematical computations such as differentiation integration and series expansion of functions and inversion of matrices with symbolic entries can be carried out quickly with emphasis on exactness of results and without much human effort Computer algebra systems are powerful tools for mathematicians physicists chemists engineers technicians psychologists sociologists in short for anybody who needs to do mathematical computations Computer algebra systems are indispensable in modern pure and applied scientific research and education This book is a gentle introduction to one of the modern computer algebra systems viz Maple Primary emphasis is on learning what can be done with Maple and how it can be used to solve applied mathematical problems To this end the book contains many examples and exercises both elementary

and more sophisticated. They stimulate you to use Maple and encourage you to find your way through the system. An advice: read this book in conjunction with the Maple system, try the examples, make variations of them and try to solve the exercises.

Discovering Mathematics with Maple R.J. Stroeker, J.F. Kaashoek, 2012-12-06. This book grew out of the wish to let students of econometrics get acquainted with the powerful techniques of computer algebra at an early stage in their curriculum. As no textbook available at the time met our requirements as to content and presentation, we had no other choice than to write our own course material. The try-out on a group of 80 first-year students was not without success and after adding some necessary modifications, the same material was presented to a new group of students of similar size the year after. Some more adjustments were made and the final result now lies before you. Working with computer algebra packages like Derive, Mathematica and Maple over many years convinced us of the favourable prospects of computer algebra as a means of improving the student's understanding of the difficult concepts on which mathematical techniques are often based. Moreover, advanced mathematical education, be it for mathematics itself or for mathematical statistics, operations research and other branches of applied mathematics, can greatly profit from the large amount of non-trivial mathematical knowledge that is stored in a computer algebra system. Admittedly, the fact remains that many a tough mathematical problem, such as solving a complicated non-linear system or obtaining a finite expression for a multiple parameter integral, can not easily be handled by computer algebra, either if at all.
