

"No work in this genre has come closer to better
than David Christian's *Maps of Time*.
It is a brilliantly executed act of provocation."

Maps Of Time An Introduction To Big History:

Maps of Time David Christian, 2004-02-23 An introduction to a new way of looking at history from a perspective that stretches from the beginning of time to the present day *Maps of Time* is world history on an unprecedented scale Beginning with the Big Bang David Christian views the interaction of the natural world with the more recent arrivals in flora and fauna including human beings Cosmology geology archeology and population and environmental studies all figure in David Christian's account which is an ambitious overview of the emerging field of Big History *Maps of Time* opens with the origins of the universe the stars and the galaxies the sun and the solar system including the earth and conducts readers through the evolution of the planet before human habitation It surveys the development of human society from the Paleolithic era through the transition to agriculture the emergence of cities and states and the birth of the modern industrial period right up to intimations of possible futures Sweeping in scope finely focused in its minute detail this riveting account of the known world from the inception of space time to the prospects of global warming lays the groundwork for world history and Big History true as never before to its name *Maps of Time* David Christian, 2004 An introduction to a new way of looking at history

from a perspective that stretches from the beginning of time to the present day *Maps of Time* is world history on an unprecedented scale Beginning with the Big Bang David Christian views the interaction of the natural world with the more recent arrivals in flora and fauna including human beings **Maps of Time** David Christian, **Big History** Cynthia Stokes Brown, 2012-11-06 This exciting saga crosses space and time to illustrate how humans born of stardust were shaped and how they in turn shaped the world we know today Publishers Weekly This book offers world history on a grand scale pulling back for a wider view and putting the relatively brief time span of human history in context After all our five thousand years of recorded civilization account for only about one millionth of the lifetime of our planet Kirkus Reviews Big History interweaves different disciplines of knowledge drawing on both the natural sciences and the human sciences to offer an all encompassing account of history on Earth This new edition is more relevant than ever before as we increasingly grapple with accelerating rates of change and ultimately the legacy we will bequeath to future generations Here is a path breaking portrait of our world from the birth of the universe from a single point the size of an atom to life on a twenty first century planet inhabited by seven billion people **The Routledge Companion to Big History** Craig Benjamin, Esther Quaedackers, David Baker, 2019-08-01 The Routledge Companion to Big History guides readers through the variety of themes and concepts that structure contemporary scholarship in the field of big history The volume is divided into five parts each representing current and evolving areas of interest to the community including big history's relationship to science social science the humanities and the future as well as teaching big history and little big histories Considering an ever expanding range of theoretical pedagogical and research topics the book addresses such questions as what is the relationship between big history and scientific research how are big historians working with philosophers and religious thinkers to help construct

meaning how are leading theoreticians making sense of big history and its relationship to other creation narratives and paradigms what is little big history and how does big history impact on thinking about the future The book highlights the place of big history in historiographical traditions and the ways in which it can be used in education and public discourse across disciplines and at all levels A timely collection with contributions from leading proponents in the field it is the ideal guide for those wanting to engage with the theories and concepts behind big history Talking Back to the Bible Edward G. Simmons, 2016-02-25 Talking Back to the Bible by Dr Edward G Simmons In a fascinating rumination Edward G Simmons combines a lifetime's experiences and biblical research in a voice that is as comfortable and welcoming as if one was seated in an easy chair in his study With his fierce intellect and honesty Simmons layers his philosophical lessons with personal insights and the latest discoveries of science The audience I hope will be anyone who enjoys studying the Bible and prefers seeking new and challenging insights rather than devotional rehashing of traditional messages Pastors scholars students and anyone in quest of spiritual insight through Bible study should find these conversations entertaining challenging and inspirational My hopes would be met if such readers found the insights presented here did indeed promote a stronger sense of relationship with God Edward G Simmons **Making Sense in History** Andrew Szanajda, 2007 Making Sense in History provides a guide for history students and teachers This work provides descriptions and analysis of several approaches for writing history While the focus is on how history has been written the methods that are researched in the book are suitable as a reference work for college level history students and teachers It provides an overview of how research has been undertaken and how authors throughout history have written history Most works of this type deal with either the philosophy of history methodology for writing history or historiography This work combines **Teaching Big History** Richard B. Simon, Mojgan Behmand, Thomas Burke, 2015 Big History is a new field on a grand scale it tells the story of the universe over time through a diverse range of disciplines that spans cosmology physics chemistry astronomy geology evolutionary biology anthropology and archaeology thereby reconciling traditional human history with environmental geography and natural history Weaving the myriad threads of evidence based human knowledge into a master narrative that stretches from the beginning of the universe to the present the Big History framework helps students make sense of their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them Teaching Big History is a powerful analytic and pedagogical resource and serves as a comprehensive guide for teaching Big History as well for sharing ideas about the subject and planning a curriculum around it Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around Big History The book includes teaching materials examples and detailed sample exercises This book is also an engaging first hand account of how a group of professors built an entire Big History general education curriculum for first year students demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning

this incredible story can be transformative for professors and students alike *World Statehood* Heikki Patomäki, 2023-07-07 Developing a processual understanding of world statehood this book combines history political philosophy explanatory social science and critical reflexive futures studies While doing so it poses essential questions about world political integration especially i whether and to what degree elements of world statehood exist today ii whether the development of further elements of world statehood in some stronger sense can be seen as a tendential direction of history and iii whether and under what conditions a world state could be viable The book is organised into three parts The first part Cosmopolitical processes explores whether world history as a whole is directed towards planetary integration focusing on the emergence of cosmopolitanism the world economy and the peace problematic The second part of the book Reflexive futures and agency focuses on the contemporary 21st century processes of world history in terms of how non fixed pasts changing contexts and anticipations of the future interact The author explains how certain rational directionality is compatible with the possibility of deglobalisation disintegrative tendencies and gridlock in global governance in the key areas of the economy security and environment In the final part of the book World statehood and beyond the author develops further the processual and open ended account of the formation of interconnected elements of world statehood by discussing the cases of a global greenhouse gas tax and world parliament He also analyses the feasibility of different paths towards global scale integration and the potential for conflicts divisions and disintegration This book is a must read for students and scholars of political science international relations history sociology political philosophy and futures studies interested in a better understanding of world statehood world political integration as well as the future of world politics *Cosmos & Culture: Cultural Evolution in a Cosmic Context* Steven J.
