Mathematical Theory of Entropy Nathaniel F. G. Martin, James W. England, 2011-06-02 This excellent 1981 treatment of the mathematical theory of entropy gives an accessible exposition its application to other fields Mathematical and Conceptual Foundations of 20th-Century Physics G.G. Emch, 2000-04-01 This book is primarily intended for Mathematicians but students in the physical sciences will find here information not usually available in physics texts The main aim of this book is to provide a unified mathematical account of the conceptual foundations of 20th Century Physics in a form suitable for a one year survey course in Mathematics or Mathematical Physics Emphasis is laid on the interlocked historical development of mathematical and physical ideas Operator Theoretic Aspects of Ergodic Theory Tanja Eisner, Bálint Farkas, Markus Haase, Rainer Nagel, 2015-11-18 Stunning recent results by Host Kra Green Tao and others highlight the timeliness of this systematic introduction to classical ergodic theory using the tools of operator theory Assuming no prior exposure to ergodic theory this book provides a modern foundation for introductory courses on ergodic theory especially for students or researchers with an interest in functional analysis While basic analytic notions and results are reviewed in several appendices more advanced operator theoretic topics are developed in detail even beyond their immediate connection with ergodic theory As a consequence the book is also suitable for advanced or special topic courses on functional analysis with applications to ergodic theory Topics include an intuitive introduction to ergodic theory an introduction to the basic notions constructions and standard examples of topological dynamical systems Koopman operators Banach lattices lattice and algebra homomorphisms and the Gelfand Naimark theorem measure preserving dynamical systems von Neumann s Mean Ergodic Theorem and Birkhoff's Pointwise Ergodic Theorem strongly and weakly mixing systems an examination of notions of isomorphism for measure preserving systems Markov operators and the related concept of a factor of a measure preserving system compact groups and semigroups and a powerful tool in their study the Jacobs de Leeuw Glicksberg decomposition an introduction to the spectral theory of dynamical systems the theorems of Furstenberg and Weiss on multiple recurrence and applications of dynamical systems to combinatorics theorems of van der Waerden Gallai and Hindman Furstenberg's Correspondence Principle theorems of Roth and Furstenberg S rk zy Beyond its use in the classroom Operator Theoretic Aspects of Ergodic Theory can serve as a valuable foundation for doing research at the intersection of ergodic theory and operator theory **Ergodic Dynamics** Jane Hawkins, 2021-01-28 This textbook provides a broad introduction to the fields of dynamical systems and ergodic theory Motivated by examples throughout the author offers readers an approachable entry point to the dynamics of ergodic systems Modern and classical applications complement the theory on topics ranging from financial fraud to virus dynamics offering numerous avenues for further inquiry Starting with several simple examples of dynamical systems the book begins by establishing the basics of measurable dynamical systems attractors and the ergodic theorems From here chapters are modular and can be selected according to interest Highlights

include the Perron Frobenius theorem which is presented with proof and applications that include Google PageRank An in depth exploration of invariant measures includes ratio sets and type III measurable dynamical systems using the von Neumann factor classification Topological and measure theoretic entropy are illustrated and compared in detail with an algorithmic application of entropy used to study the papillomavirus genome A chapter on complex dynamics introduces Julia sets and proves their ergodicity for certain maps Cellular automata are explored as a series of case studies in one and two dimensions including Conway's Game of Life and latent infections of HIV Other chapters discuss mixing properties shift spaces and toral automorphisms Ergodic Dynamics unifies topics across ergodic theory topological dynamics complex dynamics and dynamical systems offering an accessible introduction to the area Readers across pure and applied mathematics will appreciate the rich illustration of the theory through examples real world connections and vivid color graphics A solid grounding in measure theory topology and complex analysis is assumed appendices provide a brief review of the essentials from measure theory functional analysis and probability Model Theory Wilfrid Hodges, 1993-03-11 Model theory is concerned with the notions of definition interpretation and structure in a very general setting and is applied to a wide range of other areas such as set theory geometry algebra and computer science This book provides an integrated introduction to model theory for graduate students Handbook of Categorical Algebra: Volume 3, Sheaf Theory Francis Borceux, 1994-12-08 The Handbook of Categorical Algebra is intended to give in three volumes a rather detailed account of what ideally everybody working in category theory should know whatever the specific topic of research they have chosen The book is planned also to serve as a reference book for both specialists in the field and all those using category theory as a tool Volume 3 begins with the essential aspects of the theory of locales proceeding to a study in chapter 2 of the sheaves on a locale and on a topological space in their various equivalent presentations functors etale maps or W sets Next this situation is generalized to the case of sheaves on a site and the corresponding notion of Grothendieck topos is introduced Chapter 4 relates the theory of Grothendieck toposes with that of accessible categories and sketches by proving the existence of a classifying topos for all coherent theories Handbook of Categorical Algebra: Basic category theory Francis Borceux, 1994 The first of a 3 volume work this text gives a detailed account of what should be known by all working in or using category theory This volume covers basic the concepts Handbook of Categorical Algebra: Categories and structures Francis Borceux, 1994 The second volume which assumes familiarity with the material in the first introduces important classes of categories that have played a fundamental role in the subject s development and applications In addition after several chapters discussing specific categories the book develops all the major concepts concerning Benabou s ideas of fibered categories **Equilibrium States in Ergodic Theory** Gerhard Keller, 1998-01-22 This book provides a detailed introduction to the ergodic theory of equilibrium states giving equal weight to two of its most important applications namely to equilibrium statistical mechanics on lattices and to time discrete dynamical systems It starts with a chapter on equilibrium

states on finite probability spaces which introduces the main examples for the theory on an elementary level After two chapters on abstract ergodic theory and entropy equilibrium states and variational principles on compact metric spaces are introduced emphasizing their convex geometric interpretation Stationary Gibbs measures large deviations the Ising model with external field Markov measures Sinai Bowen Ruelle measures for interval maps and dimension maximal measures for iterated function systems are the topics to which the general theory is applied in the last part of the book The text is self contained except for some measure theoretic prerequisites which are listed with references to the literature in an appendix

Birkhoff Interpolation G. G. Lorentz, K. Jetter, S. D. Riemenschneider, 1984-12-28 This reference book provides the main definitions theorems and techniques in the theory of Birkhoff interpolation by polynomials The book begins with an article by G G Lorentz that discusses some of the important developments in approximation and interpolation in the last twenty years It presents all the basic material known at the present time in a unified manner Topics discussed include applications of Birkhoff interpolation to approximation theory quadrature formulas and Chebyshev systems lacunary interpolation at special knots and an introduction to the theory of Birkhoff interpolation by splines *Geometric Tomography* Richard J.
