Wolfe,2001-04-26 This book is about using the Internet as a teaching tool It starts with the psychology of the learner and looks at how best to fit technology to the student rather than the other way around The authors include leading authorities in

many areas of psychology and the book takes a broad look at learners as people. Thus it includes a wide range of materials from how the eye reads moving graphs on a Web page to how people who have never met face to face can interact on the Internet and create communities of learners. The book considers many Internet technologies but focuses on the World Wide Web and new hybrid technologies that integrate the Web with other communications technologies. This book is essential to researchers in psychology and education who are interested in learning. It is also used in college and graduate courses in departments of psychology and educational psychology. Teachers and trainers at any level who are using technology in their teaching or thinking about it find this book very useful.

Effective Information Retrieval from the Internet Alison Stacey, Adrian Stacey, 2004-07-31

Effective Information Retrieval from the Internet discusses practical strategies which enable the advanced web user to locate information effectively and to form a precise evaluation of the accuracy of that information. Although the book provides a brief but thorough review of the technologies which are available for these purposes, most of the book concerns practical future proof techniques which are independent of changes in the tools available. For example, the book covers how to retrieve salient information quickly, how to remove or compensate for bias and tuition of novice Internet users. Importantly, the book enables readers to develop strategies which will continue to be useful despite the rapidly evolving state of the Internet and Internet technologies; it is not about technological tricks. Enables readers to be aware of and compensate for bias and errors which are ubiquitous on the Internet. Provides contemporary information on the deficiencies in web skills of novice users as well as practical techniques for teaching such users.
