Miocene Paleosols And Ape Habitats In Pakistan And Kenya:

Miocene Paleosols and Ape Habitats of Pakistan and Kenya Greg John Retallack, 1991 In this book the habitats of our apelike ancestors of the Miocene epoch some 7 to 20 million years ago are re examined from the perspective of knowledge yielded by the buried fossil soils in which they have been found Fossilized soils or paleosols are distinctive layers within a sedimentary or volcanic sequence and they also can be clues to former ecosystems and other aspects of paleoenvironments Here the author characterizes in detail some 20 kinds of paleosols from the Kenyan and Pakistani localities for the dryopithecine and ramapithecine apes made famous by L S B Leakey and D R Pilbeam The extensive evidence cited allows for the reassessment of vegetation and landscape features of ancient tropical sites that are the source of much of what is known about our remote Miocene ancestors The text also provides a basis for understanding paleosols formed in all tropical climates and alluvial settings and offers a model for future research on human evolution and major events in the geological history of soils It is a valuable resource for paleontologists anthropologists and soil scientists

Handbook of Paleoanthropology Winfried Henke, Ian Tattersall, 2007-05-10 This 3 volume handbook brings together contributions by the world's leading specialists that reflect the broad spectrum of modern palaeoanthropology thus presenting an indispensable resource for professionals and students alike Vol 1 reviews principles methods and approaches recounting recent advances and state of the art knowledge in phylogenetic analysis palaeoecology and evolutionary theory and philosophy Vol 2 examines primate origins evolution behaviour and adaptive variety emphasizing integration of fossil data with contemporary knowledge of the behaviour and ecology of living primates in natural environments Vol 3 deals with fossil and molecular evidence for the evolution of *Homo sapiens* and its fossil relatives

An Ape's view of Human Evolution Peter Andrews, 2015 This book brings together ecology evolution genetics anatomy and geology to provide a new perspective on human evolution from the apes viewpoint

Fossil Mammals of Asia Xiaoming Wang, Lawrence J. Flynn, Mikael Fortelius, 2013-05-14 Fossil Mammals of Asia edited by and with contributions from world renowned scholars is the first major work devoted to the late Cenozoic Neogene mammalian biostratigraphy and geochronology of Asia This volume employs cutting edge biostratigraphic and geochemical dating methods to map the emergence of mammals across the continent Written by specialists working in a variety of Asian regions it uses data from many basins with spectacular fossil records to establish a groundbreaking geochronological framework for the evolution of land mammals Asia's violent tectonic history has resulted in some of the world's most varied topography and its high mountain ranges and intense monsoon climates have spawned widely diverse environments over time These geologic conditions profoundly influenced the evolution of Asian mammals and their migration into Europe Africa and North America Focusing on amazing new fossil finds that have redefined Asia's role in mammalian evolution this volume synthesizes information from a range of field studies on Asian mammals and biostratigraphy helping to trace the histories and movements of extinct and extant mammals from various major groups and all northern continents and

providing geologists with a richer understanding of a variety of Asian terrains

Function, Phylogeny, and Fossils David R. Begun, Carol V. Ward, Michael D. Rose, 2013-11-21 An insightful new work Function Phylogeny and Fossils integrates two practices in paleobiology which are often separated functional and phylogenetic analysis The book summarizes the evidence on paleoenvironments at the most important Miocene hominoid sites and relates it to the pertinent fossil record The contributors present the most up to date statements on the functional anatomy and likely behavior of the best known hominoids of this crucial period of ape and human evolution A key feature is a comprehensive table listing 240 characteristics among 13 genera of living and extinct hominoids

Soils in Archaeological Research Vance T. Holliday, 2004-08-19 Soils invaluable indicators of the nature and history of the physical and human landscape have strongly influenced the cultural record left to archaeologists Not only are they primary reservoirs for artifacts they often encase entire sites And soil forming processes in themselves are an important component of site formation influencing which artifacts features and environmental indicators floral faunal and geological will be destroyed and to what extent and which will be preserved and how well In this book Holliday will address each of these issues in terms of fundamentals as well as in field case histories from all over the world The focus will be on principles of soil geomorphology soil stratigraphy and soil chemistry and their applications in archaeological research

Hominoid Evolution and Climatic Change in Europe: Volume 1, The Evolution of Neogene Terrestrial Ecosystems in Europe Jordi Agustí, Lorenzo Rook, Peter Andrews, 1999-10-07 Reconstructs European and Mediterranean climate over the last 20 million years in relation to human evolution

Pleistocene Amphibians and Reptiles in Britain and Europe J. Alan Holman, 1998 The Pleistocene epoch or Ice Age an extended period of advancing and retreating ice sheets is characterized by striking climatic oscillations and sea level fluctuations This age saw the rise and spread of humans and a great extinction of large mammals by the end of the epoch in fact the world today is essentially the product of dramatic changes that took place in the Pleistocene This book a companion to the author's Pleistocene Amphibians and Reptiles in North America discusses the Pleistocene amphibians and reptiles in Britain and the European continent eastward through present day Poland the Czech Republic Hungary the Yugoslavian republics and Greece The book begins with a general discussion of the Pleistocene in Britain and Europe with an emphasis on regional terms used to define Pleistocene chronological events Next a look at the pre Pleistocene herpetofauna of the study area sets the stage for a discussion of Pleistocene herpetofauna A significant section of the book consists of a bestiary a series of annotated taxonomic accounts of Pleistocene herpetological taxa from the region Following this is the interpretive section beginning with a discussion of herpetological species as paleoenvironmental indicators and continuing with an analysis of herpetological population adjustments to Pleistocene events in Britain and Europe and then with a discussion of extinction patterns in the region Finally the author compares Pleistocene herpetological events in Europe with those in North America This volume and its companion together provide an up to date and comprehensive review of Pleistocene herpetofaunas across a significant

portion of the Northern Hemisphere *At the Foot of the Himalayas* Catherine Badgley, Michèle E. Morgan, David Pilbeam, 2025-01-28 This authoritative volume brings together decades of insights from one of the longest terrestrial fossil records on the planet The fabled Himalayas have isolated and sheltered the Indian subcontinent for millions of years The Siwalik sequence of sediments at their feet has been a treasure trove of visions into the past for generations of paleontologists preserving an immense 20 million years of terrestrial ecosystems fossil record The Siwalik sequence reveals a unique forest wonderland of diverse animal species from huge elephant relatives great rhinos and sabertooth cats to mongooses swamp rats crocodiles and catfish Regional climate change eventually caused this forest ecosystem to unravel as grasslands replaced the forests and established the habitats and animals of the modern ecosystems of the Indus and Ganges rivers In *At the Foot of the Himalayas* celebrated paleontologists Catherine Badgley Mich le Morgan and David Pilbeam bring together a collection of world renowned scholars to present an interdisciplinary approach to documenting and interpreting this fossil record By investigating changes in landscape climate and vertebrate species diversity their analysis reveals insights into a central question about biodiversity which evolutionary developments were influenced by changes in climate and which were caused by interactions among the species themselves This groundbreaking book illuminates for the first time a mysterious and vibrant paleontological past bringing together more than 40 years of exciting international collaborative studies that forge invaluable knowledge pathways for the ecologists evolutionary scientists and paleontologists of the future and pose important questions about our fragile ecosystems in the present day Hominid Adaptations and Extinctions David W. Cameron, 2004 Looking at a period of history 22 to 2.5 million years ago this title examines the record of the Neogene fossil apes their adaptive trends their morphologies and their relationships to the environment their evolution and their extinctions to provide insights into the evolution of our most distant and our most immediate fossil ancestors Eocene and Oligocene Paleosols of Central Oregon Greg John Retallack, Erick A. Bestland, Theodore J. Fremd, 1999-01-01 Treatise on Geophysics , 2015-04-17 *Treatise on Geophysics* Second Edition is a comprehensive and in depth study of the physics of the Earth beyond what any geophysics text has provided previously Thoroughly revised and updated it provides fundamental and state of the art discussion of all aspects of geophysics A highlight of the second edition is a new volume on Near Surface Geophysics that discusses the role of geophysics in the exploitation and conservation of natural resources and the assessment of degradation of natural systems by pollution Additional features include new material in the Planets and Moon Mantle Dynamics Core Dynamics Crustal and Lithosphere Dynamics Evolution of the Earth and Geodesy volumes New material is also presented on the uses of Earth gravity measurements This title is essential for professionals researchers professors and advanced undergraduate and graduate students in the fields of Geophysics and Earth system science Comprehensive and detailed coverage of all aspects of geophysics Fundamental and state of the art discussions of all research topics Integration of topics into a coherent whole **Soils of the Past** Gregory J. Retallack, 2008-04-30 It has been 10 years since publication

of the first edition of *Soils of the Past* In that time the subject of paleopedology has grown rapidly and established itself within the mainstream of geological research Ancient soils contain vital mineralogical geochemical textural and paleontological information about the continental environments in which they formed Advances in isotope geochemistry and sequence stratigraphic models allow more detailed reconstructions of environmental change from paleosols and new insights into diverse topics like atmospheric chemistry global change palaeoecology geobiology and mass extinction This fully updated second edition of *Soils of the Past* gives describes the main types of ancient soil procedures for their recognition and study their classification and most significantly a wide array of examples of how paleosols have been used for paleoenvironmental reconstruction *Soils of the Past* is written for advanced undergraduates studying paleopedology as part of a degree in geology environmental science or physical geography and for interested professional earth scientists In the last few years however palaeopedology has become an established discipline in its own right so the time is ripe for a new edition This new book will be a good reflection of the current state of knowledge and be widely adopted First edition was very well received and sold over 1500 copies when the subject was relatively new The field has now grown enormously and the second edition should do considerably better The new edition covers new developments in the field such as Soils and Climate stable isotope analysis of soils soils and sequence stratigraphy This edition represents the only available overview of the subject at this level

Human Origins and Environmental Backgrounds Hidemi Ishida, Russell Tuttle, Martin Pickford, Naomichi Ogiwara, Masato Nakatsukasa, 2006-10-12 Advances in fossil studies relating to the origin of *Homo sapiens* have strengthened the hypothesis that our direct ancestors originated on the African continent Most researchers also agree that the time when prehumans diverged from the last common ancestor was in the early part of the Late Miocene epoch Focus must now shift from determining the times and places of hominid origins to clarifying hominid evolutionary problems such as the selective factors and acquisition processes of hominid bipedalism In March of 2003 researchers from Africa Europe Japan and the United States convened in Kyoto for a symposium on Human Origins and Environmental Backgrounds an interdisciplinary effort to consider these evolutionary puzzles to report current research and to exchange thoughts towards better understanding the relationship among environmental changes adaptive mechanisms and human origins This book is the result of that symposium and includes a diverse and unique set of papers on topics such as hominid evolution dispersal and morphology and the origins of bipedalism

Eocene-Oligocene Climatic and Biotic Evolution Donald R. Prothero, William A. Berggren, 2014-07-14 The transition from the Eocene to the Oligocene epochs was the most significant event in earth history since the extinction of dinosaurs As the first Antarctic ice sheets appeared major extinctions and faunal turnovers took place on the land and in the sea eliminating forms adapted to a tropical world and replacing them with the ancestors of most of our modern animal and plant life Through a detailed study of climatic conditions and of organisms buried in Eocene Oligocene sediments this volume

shows that the separation of Antarctica from Australia was a critical factor in changing oceanic circulation and ultimately world climate In this book forty eight leading scientists examine the full range of Eocene and Oligocene phenomena Their articles cover nearly every major group of organisms in the ocean and on land and include evidence from paleontology stable isotopes sedimentology seismology and computer climatic modeling The volume concludes with an update of the geochronologic framework of the late Paleogene Originally published in 1992 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Tectonics of the Nanga Parbat Syntaxis and the Western Himalaya Geological Society of London,2000 **Elwyn Simons: A Search for Origins** John G Fleagle,Christopher C. Gilbert,2007-12-03 For nearly a half century Dr Simons has dominated the study of primate evolution This volume summarizes the current state of knowledge in many aspects of primate and human evolution that have been studied by Simons and his colleagues and place it in a broader paleontological and historical perspective The book contains the results of new research as well as reviews of many of the critical issues in primate and human evolution during the last half of the twentieth century [Antarctic Journal of the United States](#) ,1995

Equations of State for Solids in Geophysics and Ceramic Science Orson Anderson,1995-01-12 Written by a renowned expert in the field this book is the most comprehensive treatment available on the applications of equations of state EoS in geophysics and materials science a topic of fundamental importance to those studying the physics and chemistry of the Earth Part one offers comprehensive treatments of thermal properties associated with EoS thermodynamic and statistical mechanical backgrounds and thermoelastic properties Definitions of the physical properties needed for the EoS are provided as well Part two discusses the isothermal pressure volume relationship The ab initio approach EoS based upon quantum mechanics fundamentals using numerical methods is utilized to clearly represent and analyze the measured data Part three offers an advanced treatment of thermal properties at high temperature and includes discussions of thermal pressure shocked solids and EoS applications to materials science topics such as melting and thermodynamic function Advanced students researchers and professionals in geophysics ceramics science solid state physics and geochemistry will want to read this book
