Prognosis Of Epilepsies:

Prognosis of Epilepsies Pierre Jallon, 2003 The last book on the prognosis of epilepsies was written by Rodin in 1968 For the next 35 years many original papers or chapters in textbooks were published on this complex topic Most of these endeavours reflecting the clinician s highly detailed point of view were based on selected cases with little concern for the epidemiological context or upon the epidemiologist s population based approach which tends to ignore important clinical details Until quite recently fundamental epidemiological aspects of epilepsy as it is understood by clinicians have not been explored and clinicians viewed populationbased epidemiology as relatively irrelevant to their daily practice This book is divided into two major parts Presentations in the first part address methodological issues regarding prognostic studies including remission and mortality as well as results from long term cohort studies The second part contains presentations on the clinical aspects and prognosis of several individual epilepsy syndromes as well as presentations about the prognosis of status epilepticus and outcome of frontal and temporal lobe surgery [Indexes to the Epilepsy Accessions of the Epilepsy Information System](#) J.
