Andrew K. Chan, Cheng Peng, 2003 Although there have been numerous books on wavelet applications to various scientific disciplines this cutting edge practical book is the first to concentrate on wavelet applications to remote sensing and subsurface sensing from an engineer s point of view The book introduces you to wavelet transform uses in a wide range of

sensing technologies demonstrates the usefulness of combining the wavelet transform with other signal processing tools to solve complicated sensing technology problems and features several time saving algorithms and Matlab codes that help you with your specific projects in the field *Backscattering from Multiscale Rough Surfaces with Application to Wind Scatterometry* Adrian K. Fung,2015-06-01 This resource explains and demonstrates the backscattering properties of multiscale rough surfaces and illustrates their application to establish the geophysical model function GMF needed in wind scatterometry This book also explains how the mechanisms of backscattering change with frequency and the incident angle on a multiscale surface and how to recognize single scale versus multiscale surfaces very useful information for those wanting to use backscattering models more efficiently **Special Report** ,1996 **Introduction to Electromagnetic Wave Propagation** Paul Rohan,1991 This book constitutes the first single volume English language treatise on electromagnetic wave propagation across the frequency spectrum **Handbook of Radar Scattering Statistics for Terrain** Fawwaz Ulaby,2019-06-30 The classic reference for radar and remote sensing engineers Handbook of Radar for Scattering Statistics for Terrain has been reissued with updated practical software for modern data analysis applications First published in 1989 this update features a new preface along with three new appendices that explain how to use the new software and graphical user interface Python and MATLAB based software has been utilized so remote sensing and radar engineers can utilize the wealth of statistical data that came with the original book and software This update combines the book and software previously sold separately into a single new product The text first presents detailed examinations of the statistical behavior of speckle when superimposed on nonuniform terrain The Handbook of Radar Scattering Statistics for Terrain then supports system design and signal processing applications with a complete database of calibrated backscattering coefficients Compiled over 30 years the statistical summaries of radar backscatter from terrain offers you over 400 000 data points compiled in tabular format With this text you ll own the most comprehensive database of radar terrain scattering statistics ever compiled Derived from measurements made by both airborne and ground based scatterometer systems the database includes information from 114 references The text provides over 60 tables of backscatter data for 9 different surface categories all derived under strict quality criteria Rigorous standards for calibration accuracy measurement precision and category identification make the database the most reliable source for scattering statistics ever available **Understanding Synthetic Aperture Radar Images** Chris Oliver,Shaun Quegan,1998 This practical reference shows SAR system designers and remote sensing specialists how to produce higher quality SAR images using data driven algorithms and apply powerful new techniques to measure and analyze SAR image content It describes how SAR imagery is formed how SAR processing affects image properties and gives you specific guidance in selecting and applying today s most sophisticated analytical techniques Filled with real world examples from various SAR systems the book reveals sophisticated proven techniques for SAR filtering parameter estimation image reconstruction segmentation and classification

Microwave Radiometer Systems Niels Skou, D. M. Le Vine, 2006 Thoroughly revising and updating an Artech House classic from 1989 this authoritative resource offers you a comprehensive and current understanding of radiometer systems and shows you how to design a system based on given specifications taking into account both technical aspects and geophysical realities The second edition contains a wealth of new material including coverage of two of today's hottest microwave radiometry topics polarimetric measurements and aperture synthesis The book provides you with a complete explanation of radiometer sensitivity and describes the concept of absolute accuracy and its associated problems The four major radiometer principles total power Dicke noise injection and correlation are presented in detail and their sensitivities are derived from the basic sensitivity formula provided in the book Additionally you find detailed review of the DTU noise injection radiometer system
