Pentilla, Aki Toivonen, Wenyue Zheng, 2017-10-31 Materials and Water Chemistry for Supercritical Water cooled Reactors is unique in that it brings together materials and water chemistry their interrelationship the historical perspective and their application to SCWR conceptual design Written by world's leading experts all active in the area of materials and chemistry R D in support of GEN IV SCWR this book presents for the first time a comprehensive reference on these topics and in particular how these data relate to the SCWR design itself This book is an essential text for researchers in the areas of supercritical water cooled reactor materials and chemistry working in industry or academia It will also give newcomers to the field a survey of all of the available literature and a clear understanding of how these studies relate to the design of the SCWR concept The material presented is at a specialist's level in materials or corrosion science or in water chemistry of power plants Provides comprehensive coverage of the chemistry and materials of SCWR Presents the latest research and results condensed into one book Covers the differences in use of SCW in nuclear reactors and fossil plants and the resulting differences in materials Fundamentals of Radiation Materials Science GARY S. WAS, 2016-07-08 The revised second edition of requirements this established text offers readers a significantly expanded introduction to the effects of radiation on metals and alloys It describes the various processes that occur when energetic particles strike a solid inducing changes to the physical and mechanical properties of the material Specifically it covers particle interaction with the metals and alloys used in nuclear reactor cores and hence subject to intense radiation fields It describes the basics of particle atom interaction for a range of particle types the amount and spatial extent of the resulting radiation damage the physical effects of irradiation and the changes in mechanical behavior of irradiated metals and alloys Updated throughout some major enhancements for the new edition include improved treatment of low and intermediate energy elastic collisions and stopping power expanded sections on molecular dynamics and kinetic Monte Carlo methodologies describing collision cascade evolution new treatment of the multi frequency model of diffusion numerous examples of RIS in austenitic and ferritic martensitic alloys expanded treatment of in cascade defect clustering cluster evolution and cluster mobility new discussion of void behavior near grain boundaries a new section on ion beam assisted deposition and reorganization of hardening creep and fracture of irradiated materials Chaps 12 14 to provide a smoother and more integrated transition between the topics The book also contains two new chapters Chapter 15 focuses on the fundamentals of corrosion and stress corrosion cracking covering forms of corrosion corrosion thermodynamics corrosion kinetics polarization theory passivity crevice corrosion and stress corrosion cracking Chapter 16 extends this treatment and considers the effects of irradiation on corrosion and environmentally assisted

corrosion including the effects of irradiation on water chemistry and the mechanisms of irradiation induced stress corrosion cracking The book maintains the previous style concepts are developed systematically and quantitatively supported by worked examples references for further reading and end of chapter problem sets Aimed primarily at students of materials sciences and nuclear engineering the book will also provide a valuable resource for academic and industrial research professionals Reviews of the first edition nomenclature problems and separate bibliography at the end of each chapter allow to the reader to reach a straightforward understanding of the subject part by part this book is very pleasant to read well documented and can be seen as a very good introduction to the effects of irradiation on matter or as a good references compilation for experimented readers Pauly Nicolas Physicalia Magazine Vol 30 1 2008 The text provides enough fundamental material to explain the science and theory behind radiation effects in solids but is also written at a high enough level to be useful for professional scientists Its organization suits a graduate level materials or nuclear science course the text was written by a noted expert and active researcher in the field of radiation effects in metals the selection and organization of the material is excellent may well become a necessary reference for graduate students and researchers in radiation materials science L M Dougherty 07 11 2008 JOM the Member Journal of The Minerals Metals and Materials Symposium on Electron Metallography ,1960 Residual and Unspecified Elements in Steel Albert S.
