*Monitoring and Surveillance of Residues from the Mining and Milling of Uranium and Thorium* International Atomic Energy Agency, 2002 The conventional mining and processing of uranium and thorium ore generates large amounts of waste This report contains technical information on the development of an effective monitoring and surveillance programme for residues of radioactive ores Issued considered include modes of potential release of contaminants from mill tailings and mine waste initial environmental surveys monitoring and surveillance programmes reporting and quality assurance

*Management of Radioactive Waste from the Mining and Milling of Ores*, 2002 Provides recommendations and guidance on the safe management of radioactive waste resulting from the mining and milling of ores with the purpose of protecting workers the public and the environment from the consequences of these activities *Chemical Separation Technologies and Related Methods of Nuclear Waste Management* Gregory R. Choppin, Mikhail Kh. Khankhasayev, 1999-02-28 Separation technologies are of crucial importance to the goal of significantly reducing the volume of high level nuclear waste thereby reducing the long term health risks to mankind International co operation including the sharing of concepts and methods as well as technology transfer is essential in accelerating research and development in the field The writers of this book are all internationally recognised experts in the field of separation technology well qualified to assess and criticize the current state of separation research as well as to identify future opportunities for the application of separation technologies to the solution of nuclear waste management problems The major emphases in the book are research opportunities in the utilization of innovative and potentially more efficient and cost effective processes for waste processing treatment actinide speciation separation methods technological processing and environmental restoration National Library of Medicine Current Catalog

National Library of Medicine (U.S.), **Environmental Activities in Uranium Mining and Milling** International Atomic Energy Agency, 1999 This book provides an overview of environmental activities related to uranium production based on survey responses from 29 countries **Nuclear Safety**, 1990 *Current Catalog* National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 **Environmental and Source Monitoring for**

**Purposes of Radiation Protection** International Atomic Energy Agency, 2005 The purpose of this Safety Guide is to provide international guidance coherent with contemporary radiation protection principles and IAEA safety requirements on the strategy of monitoring in relation to a control of radionuclide discharges under practice conditions and b intervention such as in cases of nuclear or radiological emergencies or past contamination of areas with long lived radionuclides Three categories of monitoring are discussed monitoring at the source of the discharge source monitoring monitoring in the environment environmental monitoring and monitoring of individual exposure in emergencies individual monitoring The Safety Guide also provides general guidance on assessment of the doses to critical groups of the population due to the presence of radioactive materials or radiation fields in the environment both from routine operation of nuclear and other related facilities practice

and from nuclear or radiological emergencies and past contamination of areas with long lived radionuclides intervention The dose assessments are based on the results of source monitoring environmental monitoring individual monitoring or their combinations This Safety Guide is primarily intended for use by national regulatory bodies and other agencies involved in national systems of radiation monitoring as well as by operators of nuclear installations and other facilities where natural or human made radionuclides are treated and monitored
