Shulz, Nicholas J. Lombardo, 2013-11-11 Radioactive wastes resulting from over 40 years of production of nuclear weapons in the U S are currently stored in 273 underground tanks at the U S Department of Energy Hanford site Idaho National Engineering and Environmental Laboratory Oak Ridge Reservation and Savannah River site Combined tanks at these sites contain approximately 94 000 000 gallons of waste in a variety of forms including liquid concrete like salt cake and various

sludges More than 730 000 000 curies of several radioactive isotopes are present in the underground tanks Certainly one of the greatest challenges facing the U S Department of Energy is how to characterize retrieve treat and immobilize the great variety of tank wastes in a safe timely and cost effective manner For several years now the U S Department of Energy has initiated and sponsored scientific and engineering studies tests and demonstrations to develop the myriad of technologies required to dispose of the radioactive tank wastes In recent times much of the Department of Energy R responsibility for technical operations of the TF A has been assigned to the Pacific Northwest National Laboratory
