engineering disciplines to the creation of products and processes for which society has an expressed need Without this need work in the field would be sterile but with it image processing can readily provide the interested scientist or engineer with a professional lifetime of challenging problems and corresponding rewards This point of view motivates this book and has influenced the selection and treatment of topics I have not attempted to be encyclopedic this service has already been performed by others It will be noted that the word digital is not in the title of this book While much of present day image processing is implemented digitally this work is not intended for those who think of image processing as a branch of digital signal processing except perhaps to try to change their minds Image gathering and image display vital parts of the field with strong effects on image quality are inherently analog as are all of the channels and media now used or likely to be used in the future to record TV signals and to transmit them to the home
