

RAPID SOLIDIFICATION TECHNOLOGY

VAC is one of the pioneers in Rapid Solidification Technology to cast thin metallic ribbons of thickness 15 -50 μm in a single process step directly from the molten metal.

Special features of this process are:

- extremely high cooling rates of 10^6 K/s (i.e. from about 1400°C to less than 400 °C in one millisecond)
- high casting speeds of 100 km/h
- in-line winding of the thin ribbon
- automatic reel change during winding without process interruption

Rapid Solidification Technology allows the production of metallic ribbons in the amorphous (glassy) state. The lack of long range atomic order results in superior soft magnetic properties.

Via a special annealing treatment some amorphous compositions may be transformed into nanocrystalline materials

Amorphous and nanocrystalline soft magnetic alloys are the basis for many innovative applications as magnetic cores, inductive components or in labels for electronic article surveillance (EAS).

Rapid Solidification Technology:

Rapid Solidification Technology R. L. Ashbrook, 1983 *Rapid Solidification Technology* T.S. Sudarshan, T.S. Srivatsan, 1993-12-20 Rapid solidification processing results in increased strength and fracture and fatigue resistance of alloys with concurrent improvements in mechanical physical and chemical properties This volume provides a systematic examination of this technology including metallurgical aspects processing methods alloy design and applications Each chapter was prepared by a specialist for this volume The text is well illustrated with more than 400 micrographs and schematics More than 75 tables provide important reference data *Rapid solidification technology* Robert Mehrabian, Jerome Persh, 1981 **Science and Technology of Rapid Solidification and Processing** M.A. Otooni, 2012-12-06 This book represents a collection of papers presented at the NATO Advanced Research Workshop NATO ARW on Science and Technology of Rapid Solidification and Processing held at Hotel Thayer West Point Military Academy New York N Y during June 21 24 1994 The workshop was attended by over forty scientists representing several NATO member countries as well as representatives from Japan China PRC Taiwan and India The purpose of this NATO ARW conference was to review the major advances made in most recent years in both the theoretical and experimental areas of rapid solidification technology and processing In accordance with the NATO ARW format the agenda for the conference was so arranged to offer in depth presentation of the latest developments in the subject area as well as to encourage follow up discussions by the participants There were seven sessions each opened with a lecture by an invited guest speaker Sessions 1 4 covered two days of the conference and focused mainly on Processing Technologies of Rapid Solidification and Thermodynamic Properties Practical Applications Sessions 4 6 concentrated on Thermodynamics of Metastable Alloys Relaxation Diffusion Magnetic and Electric Properties Fundamentals Session 6 was devoted to the Structural Characterization of Supercooled Melts Ultra Fine Polycrystalline Materials New Innovations and Techniques There were two equally important aspects of this NATO ARW conference which must be mentioned Firstly this is the first NATO ARW conference on Science and Technology of Rapid Solidification and Processing held in the United States *Science and Technology of the Undercooled Melt* P.R. Sahm, H. Jones, C.M. Adam, 2012-12-06 SCIENCE AND TECHNOLOGY OF THE UNDERCOOLED MELT This title was chosen as the topical headline of the Advanced Research Workshop ARW from March 17 to 22 1985 held at the Castle of Theuern The usual term Rapid Solidification is an overlapping description Due to the fact that nucleation is so eminently important for the undercooling of a melt and this in turn is an important characteristic of rapid solidification undercooling plays an essential role in rapid solidification The undercooled melt has caused an accelerated evolution if not a revolution in materials science during the last decade Several rather exciting concepts with interesting potential for novel applications are being pursued presently in various laboratories and companies They concern not only new processes and hardware developments but also present challenging perspectives for ventures including the

founding of new companies or they promise growth possibilities with established larger and smaller industrial establishments
