Networks Daniel Hardy,Guy Malleus,Jean-Noel Mereur,2013-12-18 Revolution transformation upheaval and promise Yesterday the technologies of communication were accessible only to experts today they are a subject of constant discussion in the media New services are advertised on a daily basis and the potential realized or not of these technologies is a constant source of comment and discussion But beyond the media frenzy things really are developing with increasing speed driven by the power of the Internet The network has built up an ongoing relationship between research centres development teams and marketing teams allowing a constructive collaboration between technologies The network has become the catalyst for its own evolution The arrival of IP and GSM has given rise to new corporate giants like Cisco Systems and Nokia Operators witnessing the diversification of their main sources of revenue have been forced to merge or split Entirely new actors from various horizons are counting on their ability to act as operators without a network to their name Traditional equipment manufacturers have had to rethink their product lines in view of these new foundations Likewise governments have understood the need to create a body of laws that promote the harmonious and rapid development of networks to offer alternatives for operators and service providers These often complex regulations act both as constraint and opportunity for operators and give direction to the actions of actors across the board **Dimensions** ,1980-02 Semantics in Databases Bernhard Thalheim,Leonid Libkin,1998-02-25 This book presents a coherent survey on exciting developments in database

semantics The origins of the volume date back to a workshop held in Prague Czech Republic in 1995 The nine revised full papers and surveys presented were carefully reviewed for inclusion in the book They address more traditional aspects like dealing with integrity constraints and conceptual modeling as well as new areas of databases object orientation incomplete information database transformations and other issues are investigated by applying formal semantics e g the evolving algebra semantics

Working with Coders Patrick Gleeson, 2017-07-04 Get introduced to the fascinating world inhabited by the professional software developer Aimed at a non technical audience this book aims to de obfuscate the jargon explain the various activities that coders undertake and analyze the specific pressures priorities and preoccupations that developers are prone to In each case it offers pragmatic advice on how to use this knowledge to make effective business decisions and work productively with software teams Software projects are all too often utter nightmares for everyone involved Depending on which study you read between 60 and 90 percent of all software projects are completed late run over budget or deliver an inferior quality end product This blight affects everyone from large organizations trying to roll out business change to tiny startups desperately trying to launch their MVP before the money runs out While there has been much attention devoted to understanding these failings leading to the development of entire management methodologies aimed at reducing the failure rate such new processes have had at best limited success in delivering better results Based on a decade spent exploring the world of software Patrick Gleeson argues that the underlying reason for the high failure rate of software projects is that software development being a deeply arcane and idiosyncratic process tends to be thoroughly and disastrously misunderstood by managers and leaders So long as the people tasked with making decisions about software projects are unaware of these idiosyncrasies and their ramifications software projects will be delivered late software products will be unfit for purpose and relations between software developers and their non technical colleagues will be strained Even the most potent modern management tools are ineffective when wielded blindly To anyone who employs contracts manages or works with software developers *Working with Coders A Guide to Software Development for the Perplexed Non Techie* delivers the understanding necessary to reduce friction and inefficiencies at the intersection between software development teams and their non technical colleagues What You ll Learn Discover why software projects are so commonly delivered late and with an abysmal end product Examine why the relationship between coders and their non technical colleagues is often strained Understand how the software development process works and how to support it effectively Decipher and use the jargon of software development Keep a team of coders happy and improve the odds of successful software project delivery Who This Book Is For Anyone who employs contracts or manages software developers such as tech startup CEOs project managers and clients of digital agencies and wishes the relationship were easier and more productive The secondary readership is software developers who want to find ways of working more effectively as part of a team

Database Reengineering and Interoperability T.Y. Cheung, J. Fong, B. Siu, 2012-12-06 Modern computing management systems and application programs are often designed as open systems In an open environment the users

application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable In case of databases because of the variety in data models and theory the interoperability and reengineering issues become even more complex and crucial especially for companies heavily involved in data management With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly It is our hope that this year's workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors
