Badescu, R.B. Cathcart, R.D. Schuiling, 2007-05-27 Macro engineering involves the large scale modification and manipulation of natural systems for the benefit of mankind The primary goals of some Earth based macroprojects described in this book are power production land reclamation food production climate change environment water transport and coastal protection Other Earth or space projects considered here have a more futuristic ring but our present day technical skill makes their realization possible Earth based macroprojects usually combine different aspects and aims They have a major impact on the ecology of a region and the inhabitant s means of living like tourism fishing shipping Its effects may be felt worldwide like the rise in global sea level after the damming and evaporation of large ocean gulfs for power production or the change in climate following the regional reduction of solar insolation

Macro-Engineering and the Earth U W Kitzinger, E G Frankel, 1998-11 This work delivers ideas comments and projects on energy communications transport management human resources and financial and legal issues which macroengineering can contribute towards the solution of the Earth s environmental problems Some 20 engineers and scholars identify problems in the next century whose solutions call for international policy planning and a more collaborative peaceful and prosperous world order Imaginative concepts employ forward thinking for applying technology in revolutionary projects The book presents results of research on a triple helical turbine capable of extracting vast amounts of energy from slow moving water an invention which could harness rivers and ocean currents rendering high dams with their political social and ecological implications redundant These turbines are already in mass production in the USA for use in the Gulf Stream to produce energy and hydrogen fuel and can also be used to harness power from the wind Another project for which the technology is already available will harvest solar energy by satellites stationed beyond our atmosphere and beam it to the Earth and yet another calls for planetary defence of Earth against asteroid collisions The environmental section discusses large projects for changing our climate planning and costing for a sub Mediterranean aqueduct connecting the River Rhone in France with

Algeria and plans for intensive fish farming of the oceans The role of satellites includes telemedicine and there are Swiss plans for further tunnelling through the Alps Project management sections include the formation of a military civilian conservation corps financial and legal issues macro projects in China and a forecast of 21st century macro problems Delivers ideas comments and projects on energy communications transport management human resources and financial and legal issues which macroengineering can contribute to the solution of the Earth s environmental problems Identifies problems in the next century whose solutions call for international policy planning and a more collaborative peaceful and prosperous world order Presents research on a triple helical turbine capable of extracting vast amounts of energy from slow moving water
