Macromolecular Crystallography With Synchrotron Radiation:

Macromolecular Crystallography with Synchrotron Radiation John R. Helliwell, 1992 This highly illustrated monograph provides a comprehensive treatment of the study of the structure and function of the molecules of life proteins nucleic acids and viruses using synchrotron radiation and crystallography Beginning with chapters on the fundamentals of macromolecular crystallography and macromolecular structure the book goes on to review the sources and properties of synchrotron radiation instrumentation and monochromatic data collection There are also chapters on the Laue method on diffuse X ray scattering and on variable wavelength anomalous dispersion methods The book concludes with a description and survey of applications including studies at high resolution the use of small crystals the study of large unit cells and time resolved crystallography particularly of enzymes Appendices are provided that present essential information for the synchrotron user as well as information about synchrotron facilities currently available **Macromolecular**

Susanne Weisgerber, University of Manchester. Department of Chemistry, 1993 Structural Biology in Drug Discovery

Jean-Paul Renaud, 2020-01-27 With the most comprehensive and up to date overview of structure based drug discovery covering both experimental and computational approaches Structural Biology in Drug Discovery Methods Techniques and Practices describes principles methods applications and emerging paradigms of structural biology as a tool for more efficient drug development Coverage includes successful examples academic and industry insights novel concepts and advances in a rapidly evolving field The combined chapters by authors writing from the frontlines of structural biology and drug discovery give readers a valuable reference and resource that Presents the benefits limitations and potentiality of major techniques in the field such as X ray crystallography NMR neutron crystallography cryo EM mass spectrometry and other biophysical techniques and computational structural biology Includes detailed chapters on druggability allostery complementary use of thermodynamic and kinetic information and powerful approaches such as structural chemogenomics and fragment based drug design Emphasizes the need for the in depth biophysical characterization of protein targets as well as of therapeutic proteins and for a thorough quality assessment of experimental structures Illustrates advances in the field of established therapeutic targets like kinases serine proteinases GPCRs and epigenetic proteins and of more challenging ones like protein protein interactions and intrinsically disordered proteins **International Tables for Crystallography, Volume F** Eddy

Arnold, Daniel M. Himmel, Michael G. Rossmann, 2012-03-05 International Tables for Crystallography Volume F is an expert guide to macromolecular crystallography for the structural biologist It was commissioned by the International Union of Crystallography in recognition of the extraordinary contributions that knowledge of macromolecular structure has made and will make to the analysis of biological systems from enzyme catalysis to the workings of a whole cell The volume covers all

stages of a crystallographic analysis from the preparation of recombinant proteins through crystallization diffraction data collection phase determination structure validation and structure analysis Although the volume is written for experienced scientists it is recognized that the reader is more likely to be a biologist interested in structure than a classical crystallographer interested in biology Thus there are chapters on the fundamentals history and current perspectives of macromolecular crystallography as well as on useful programs and databases such as the Protein Data Bank Each chapter is written by one or more internationally recognized experts This second edition features 19 new articles and many articles from the first edition have been revised The new articles cover topics such as standard definitions for quality indicators expression of membrane proteins protein engineering high throughput crystallography radiation damage merohedral twinning low resolution ab initio phasing robotic crystal loading whole cell X ray diffraction imaging and halogen interactions in biological crystal structures There are also new articles on relevant software including software for electron microscopy These enhancements will ensure that Volume F continues to be a key reference for macromolecular crystallographers and structural biologists More information on the series can be found at <http://it.iucr.org>

Perspectives in Crystallography John R. Helliwell, 2015-11-16 Crystallography is one of the most multidisciplinary sciences with roots in fields as varied as mathematics physics chemistry biology materials science computation and earth and planetary science The structural knowledge gained from crystallography has been instrumental in acquiring new levels of understanding in numerous scientific areas

Biomolecular Crystallography Bernhard Rupp, 2009-10-20 Synthesizing over thirty years of advances into a comprehensive textbook Biomolecular Crystallography describes the fundamentals practices and applications of protein crystallography Illustrated in full color by the author the text describes mathematical and physical concepts in accessible and accurate language Biomolecular Crystallography will be a valuable resource for advanced undergraduate and graduate students and practitioners in structural biology crystallography and structural bioinformatics

Polysaccharide Degrading Biocatalysts Rosana Goldbeck, Patricia Poletto, 2023-02-15 The transformation of polysaccharides into valuable compounds for health and industry requires the careful application of enzyme protocols and controlled biocatalysis Polysaccharide Degrading Biocatalysts provides a thorough grounding in these biocatalytic processes and their growing role in the depolymerization of polysaccharides empowering researchers to discover and develop new enzyme based approaches across pharmaceuticals fuels and food engineering Here over a dozen leading experts offer a close examination of structural polysaccharides genetic modification of polysaccharides polysaccharide degradation routes pretreatments for enzymatic hydrolysis hemicellulose degrading enzymes biomass valorization processes oligosaccharide production and enzyme immobilization for the hydrolysis of polysaccharides among other topics and related research protocols A final chapter considers perspectives and challenges in an evolving carbohydrate based economy Describes the role of enzymes in the degradation of polysaccharides to obtain building blocks for biochemical processes Covers new tools for enzymatic evolution
