Macromolecular Syntheses Volume :

Macromolecular Syntheses - Volume 1 A Periodic Publication of Methods for the Preparation of Macromolecules C. G. Overberger, 1963 **Macromolecular Syntheses** J. R. Elliott, 1966 **Macromolecular Syntheses**, 1977 A periodic publication of methods for the preparation of macromolecules *Macromolecular Syntheses* William J. Bailey, William J.. Bailey, 1972 **Macromolecular Syntheses** Emerson L. Wittbecker, 1963 **Macromolecular Crystallography Protocols, Volume 1** Sylvie Doublié, 2008-02-04 Macromolecular Crystallography Protocols now in two volumes examines major developments that have occurred since publication of the acclaimed first edition nearly a decade ago Volume 1 Preparation and Crystallization of Macromolecules and Volume 2 Structure Determination explore recent advances that have accelerated the pace of structural determination and made crystallography accessible to a broader range of investigators Volume 1 is composed of detailed protocols for the preparation and optimization of crystals including tips from the experts on the best methods for inducing proteins to adopt their crystalline form Volume 2 complements the first volume by addressing laboratory techniques for crystal handling and structural characterization as well as computational techniques for data collection phasing and refinement The volume concludes with a detailed and insightful survey of available crystallographic software These volumes will be an indispensable reference for obtaining macromolecular crystals and determining their three dimensional structure Macromolecular Syntheses; Collective Volume Charles Gilbert Overberger (Chemist, United States), 1978 **Handbook of Polymer Synthesis** Hans R. Kricheldorf, Oskar Nuyken, Graham Swift, 2004-11-27 An in depth review of important preparative methods for the synthesis and chemical modification of polymers this authoritative second edition examines the advantages and limitations of various polymerization applications and procedures It features new approaches and innovative strategies from the most prominent industry and academic laboratories **Macromolecules** Hans-Georg Elias, 2013-06-29 Like so many of its kind this textbook originated from the requirements of teaching While lecturing on macromolecular science as a required subject for chemists and materials scientists on the undergraduate graduate and postgraduate levels at Swiss Federal Institute of Technology at Zurich 1960 1971 I needed a one volume textbook which treated the whole field of macromolecular science from its chemistry and physics to its applications in a not too elementary manner This textbook thus intends to bridge the gap between the often oversimplified introductory books and the highly specialized texts and monographs that cover only parts of macromolecular science This first English edition is based on the third German edition 1975 which is about 40% different from the first German edition 1971 a result of rapid progress in macromolecular science and the less rapid education of the writer This text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of macro molecules Properties depend on structure

Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before syntheses For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics of the glass temperature etc *Macromolecules* H.G. Elias, 2013-10-20 The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions
