Barnstable,M. Bruce Shields,2008-06-06 The mechanisms of the various forms of glaucoma were unknown at the outset of the twentieth century Late in the twentieth century two nascent areas of research were beginning to provide glimpses of what the twenty first century held in store for the future of glaucoma the mechanisms of glaucomatous optic neuropathy and the molecular basis of the glaucomas In *Mechanisms of the Glaucomas Disease Processes and Therapeutic Modalities* the authors review the most current knowledge available in the field and provide a basis in which

researchers can effectively study the glaucomas The intent of the book is not primarily to describe the clinical appearances of the glaucomas nor how to manage them Rather it is to provide basic scientists who are working in the field of glaucoma with a current understanding of the clinical aspects of glaucoma and to provide clinician scientists with the basic knowledge as they attempt to translate it into rational treatments for glaucoma In this important new book leaders in the various fields of glaucoma review our current understanding of glaucoma from epidemiology and genetics through molecular cellular and tissue responses to the mechanisms of the glaucomas and the mechanisms by which we manage them Mechanisms of the Glaucomas Disease Processes and Therapeutic Modalities will be of great value as its contents will aid the reader in prevention of blindness from glaucoma

Glaucoma Massimo Bucci,1996-12 The volume reports lectures and discussions presented at the International Congress on Glaucoma held in Rome on 2 4 February 1996 The Congress has been designed to clarify and possibly to define the fundamental steps for managing glaucoma patients Decision making in therapy does not mean that the conference sessions have been devoted to therapeutic problems only even if semeiologic and diagnostic problems are pertinent when aimed at successful therapy Actually it is necessary to distinguish the onset of glaucoma from ocular hypertension to decide if and how to start treatment and the methods to assess its effectiveness to understand if the failure of medical therapy justifies surgery and above all if intraocular pressure is in any case the most important risk factor to treat Particular relevance has been given to normal pressure glaucoma whose physiopatho logical and clinical characteristics are still highly controversial Two round tables were devoted to the recent advances in the treatment of glaucoma which aims at lowering intraocular pressure directly improving the eye trophism and regenerating the areas damaged by the disease All ophthalmologists particularly the younger ones have had the opportunity to capi talize on the experience and knowledge of distinguished experts from different parts of the world This has been an invaluable and perhaps unique opportunity for all of us to express our doubts and to enhance our scientific background
