Mathematical Models Of Hysteresis And Their Applications:

Mathematical Models of Hysteresis and their Applications Isaak D. Mayergoyz, 2003-10-01 This new edition has been significantly revised and updated to reflect advances in the field since the publication of the first edition such as the systematic experimental testing of Preisach models of hysteresis The author has however retained the two most salient features of the original the emphasis on the universal nature of mathematical models of hysteresis and their applicability to the description of hysteresis phenomena in various areas of science technology and economics and its accessibility to a broad audience of researchers engineers and students Provides a unique emphasis on the development of universal mathematical models of hysteresis Accessibility to a broad audience using simple and complex mathematical tools application to various areas of science Presents new theoretical and experimental results *Mathematical Models of Hysteresis* I.D. Mayergoyz, 2012-12-06

The purpose of this book is to describe in sufficient detail the mathematical models of hysteresis nonlinearities with nonlocal memories The distinct feature of these nonlinearities is that their future states depend on past histories of input variations It turns out that memories of hysteresis nonlinearities are quite selective Indeed experiments show that only some past input extrema not the entire input variations leave their marks upon future states of hysteresis nonlinearities Thus special mathematical tools are needed to describe nonlocal selective memories of hysteresis nonlinearities The origin of such tools can be traced back to the landmark paper of Preisach The book is primarily concerned with Preisach type models of hysteresis All these models have a common generic feature they are constructed as superpositions of simplest hysteresis nonlinearities rectangular loops The discussion is by and large centered around the following topics various generalizations and extensions of the classical Preisach model with special emphasis on vector generalizations finding of necessary and sufficient conditions for the representation of actual hysteresis nonlinearities by various Preisach type models solution of identification problems for these models and numerical implementation and experimental testing of Preisach type models Although the study of Preisach type models constitutes the main subject of the book some effort is also made to establish some interesting connections between these models and such topics as the critical state model for superconducting hysteresis the classical Stoner Wohlfarth model for vector magnetic hysteresis thermal activation type models for viscosity magnetostrictive hysteresis and neural networks **Modeling and Precision Control of Systems**

Marinoschi, 2006-09-05 a pure mathematician does what he can do as well as he should whilst an applied mathematician does what he should do as well as he can Gr C Moisil Romanian mathematician 1906-1973 Flows in porous media were initially the starting point for the study which has evolved into this book because the acquirement and improving of knowledge about the analysis and control of water in filtration and solute spreading are challenging and demanding present issues in many domains like soil sciences hydrology

water management water quality management ecology The mathematical modelling required by these processes revealed from the beginning interesting and difficult mathematical problems so that the attention was redirected to the theoretical mathematical aspects involved Then the qualitative results found were used for the explanation of certain behaviours of the physical processes which had made the object of the initial study and for giving answers to the real problems that arise in the soil science practice In this way the work evidences a perfect topic for an applied mathematical research This book was written in the framework of my research activity within the Institute of Mathematical Statistics and Applied Mathematics of the Romanian Academy Some results were obtained within the project CNCIS33045 2004 2006 financed by the Romanian Ministry of Research and Education In a preliminary form part of the results included here were lecture notes for master and PhD students during the scientific stages November December 2003 and May June 2004 of the author at the Center for Optimal Control and Discrete Mathematics belonging to the Central China Normal University in Wuhan
