Approaches to Syntax Jean-Pierre Paillet, André Dugas, 1982-01-01 This volume is an enhanced version of the English translation from the French original edition *Principes d'analyse syntaxique* Qu bec 1973 It provides a survey of theoretical approaches to syntax including traditional grammars structuralism functionalism and formal approaches

Recursion and Human Language Harry van der Hulst, 2010-03-26 The present volume is an edited collection of original contributions which all deal with the issue of recursion in human language s All contributions originate as papers that were presented at a conference on the topic of recursion in human language organized by Dan Everett in March 22 2007 For the purpose of this collection all articles underwent a double blind peer review process The present chapters were written in the course of 2008 Although the recursive nature of linguistic expressions i e the apparent possibility of producing an infinite number of expressions with finite means has been noted for a long time no general agreement seems to exist concerning the empirical status as well as mathematical formalization of this characteristic of human languages or of the grammars that lie behind these utterances that make up these languages Renewed interest in this subject was sparked by recent claims that recursion is perhaps the sole uniquely human and as such universal trait of human language cf Chomsky Hauser and Fitch 2000 In this volume the issue of recursion is tackled from a variety of angles Some articles cover formal issues regarding the proper characterization or definition of recursion while others focus on empirical issues by examining the kinds of structure in languages that suggest recursive mechanism in the grammar Most articles discuss syntactic phenomena but several involve morphology the lexicon and phonology In addition we find discussions that involve evolutionary notions and language disorders and the broader cognitive context of recursion

Theoretical Aspects of Passivization in the Framework of Applicative Grammar Jean-Pierre Desclés,Zlatka Guentchéva,Sebastian Shaumyan,1985-01-01 Passivization is explained by using the formalism of combinatory logic The agented passive is derived from the agentless as follows a term denoting an agent is transposed into a predicate modifier and applied to the passive predicate of the agentless construction The passive predicate consists of two parts 1 the two place converse of the active predicate and 2 a zero unspecified term to which the converse predicate is applied The passive is not derived from but is related to the active The modifier of the passive predicate is the functional counterpart of the subject in the active The proposed hypothesis gives an adequate solution to problems arising from various types of passive constructions Passivization and antipassivization are defined as instances of a general cross linguistic process involving conversion *Essays in the History of Linguistics* E. F. K. Koerner,2004-01-01 The present volume follows the author s tradition of bringing together at certain intervals selections of articles which more often than not had previously been published in not easily accessible places or which had not been published before These papers do not typically represent mere reprints but in most instances thoroughly revised versions This volume contains twelve articles organized under three headings Programmatic Papers in the History of Linguistics Studies in Linguistic Historiography and Sketches historiographical and auto biographical plus as an appendix a complete list of Zellig Harris writings as an illustration of Koerner s penchant for and belief in the importance of good bibliographies as a basis for historical research While the first two sections which take up the bulk of the volume either show the author as an historian engage or demonstrate his work as a historiographer of 19th and 20th century linguistics the third section is much shorter and less heavy going Indexes of

Moravcsik, 2012-12-06 The papers and comments published in the present volume represent the proceedings of a research workshop on the grammar and semantics of natural languages held at Stanford University in the fall of 1970. The workshop met first for three days in September and then for a period of two days in November for extended discussion and analysis. The workshop was sponsored by the Committee on Basic Research in Education which has been funded by the United States Office of Education through a grant to the National Academy of Education and the National Academy of Sciences National Research Council. We acknowledge with pleasure the sponsorship which made possible a series of lively and stimulating meetings that were both enjoyable and instructive for the three of us and we hope for most of the participants including a number of local linguists and philosophers who did not contribute papers but actively joined in the discussion. One of the central participants in the workshop was Richard Montague. We record our sense of loss at his tragic death early in 1971 and we dedicate this volume to his memory. None of the papers in the present volume discusses explicitly problems of education. In our view such a discussion is neither necessary nor sufficient for a contribution to basic research in education. There are in fact good reasons why the kind of work reported in the present volume constitutes an important aspect of basic research in education *Generative Grammar's Grave Foundational Errors* Paul M. Postal, 2025-08-04 This work examines Noam

Chomsky's widely accepted ontological assumptions now referred to as biolinguistics and demonstrates that they are internally inconsistent. Notably it is shown that Chomsky himself has at least once admitted this flaw. Additionally the volume challenges a fundamental assumption from Chomsky's 1950s linguistic writings. This is the claim that the grammars of natural languages particularly of English must be constructive proof theoretic devices usually called generative grammars. It is shown that this persistent view cannot in principle account for a multitude of linguistic structures realized as perfectly natural sentences. Finally the work scrutinizes Chomsky's frequent assertion that there is essentially only one language spoken on Earth revealing it to have no actual substance. The exposition of these flaws calls for a reassessment of fundamental aspects of generative linguistics *The Semantics of English Aspectual Complementation* A.F.

Freed, 2012-12-06 Complementation has received a great deal of attention in the past fifteen to twenty years. Various approaches have been used to study it and different groups of complement taking verbs have been examined. The approach taken here employs analytic techniques which have not been systematically applied before to this group of temporal aspectual verbs. In other works which have concentrated on these same verbs perlmutter 1968 1970 and Newmeyer 1969a 1969b few insights about the semantic properties of the verbs are formalized. In the present study the various verbs and their complement structures as they appear in surface forms are considered for their associated presuppositions and consequences entailments. The notions of presupposition and consequence are defined and used so as to take conversational

interaction into consideration This adds considerably to the information that can be obtained about the verbs in question Furthermore the analysis of these temporal aspectual verbs leads to a description of their complement structures in terms of events a semantic category found to appropriately characterize the quality of most of these structures In this analysis events are described as consisting of several different temporal segments thus the sentences contained in the complements of these verbs are described as naming events each containing one or more of several possible temporal segments The aspectualizers in turn act as referentials each referring to one or another of the event segments named in their complements Papers on Syntax Z. Harris, 2012-12-06 The selection of papers reprinted here traces the development of syntax from structural linguistics through transformational linguistics to operator grammar These three are not opposing views or independent assumptions about language Rather they are successive stages of investigation into the word combinations which constitute the sentences of a language in contrast to those which do not Throughout the goal has been to find the systematicities of these combinations and then to obtain each sentence in a uniform way from its parts In structural analysis the parts were words simple or complex belonging to particular classes or particular sequences of these In transformational analysis it is found that the parts of a sentence are elementary sentences whose parts in turn are simple words of particular classes The relation between these two analyses is seen in the existence of an intermediate stage between the two presented in paper 4 From Morpheme to Utterance A further intermediate stage is presented in the writer's String Analysis of Sentence Structure Papers on Formal Linguistics I Mouton The Hague 1962 though it was developed after transformations as a syntactic representation for computational analysis Generalization of both of these analyses leads to operator grammar in which each sentence is derived in a uniform way as a partial ordering of the originally simple words which enter into it Each step least upper bound of the partial ordering of a word requiring another forms a sentence which is a component of the sentence being analyzed **Computational Linguistics and Intelligent Text Processing** Alexander Gelbukh, 2009-02-16 This book constitutes the refereed proceedings of the 10th International Conference on Computational Linguistics and Intelligent Text Processing CILing 2009 held in Mexico City Mexico in March 2009 The 44 revised full papers presented together with 4 invited papers were carefully reviewed and selected from numerous submissions The papers cover all current issues in computational linguistics research and present intelligent text processing applications **Categorial Grammar and Word-Formation: The De-adjectival Abstract Noun in English** Karl Reichl, 2017-11-07 No detailed description available for Categorial Grammar and Word Formation The De-adjectival Abstract Noun in English **Mathematical Structures of Languages** Zellig Sabbetai Harris, 1968-01-15 **The Way We Think** Gilles Fauconnier, Mark Turner, 2003-03-18 Conceptual blending says Fauconnier cognitive science U of California San Diego and Turner behavioral sciences U of Maryland is a great mental capacity that in its most advanced double scope form gave human ancestors superiority and allowed them to develop art science religion culture sophisticated tools and language They investigate its principles
